Fall time is indeed tractor time—the time when the advantages of power farming are many—the time when an Avery will mean most to you in getting your work done in the right way. With an Avery now, you can get your fall plowing, discing, harrowing, seeding all finished double quick—also have your own power for threshing, silo filling, shelling corn, grinding feed, road work and other power jobs.

You may have said, "Some day I will have an Avery." Why wait till "some day" when having an Avery right now would mean so much to you in speeding up your work, getting it done in the right way, and insuring a big next year's crop.

A Size for Any Farm

You can get an Avery in just the right size to fit your needs best. Also "Power-Lift" Moldboard or Disc Plows to fit any size Avery Tractor and "Self-Adjusting" Tractor Disc Harrows and "Power-Lift" Tractor Grain Drills. All these tools are operated from the tractor platform—real one-man outfits.

When you get an Avery you put speed and certainty into your farm work. Five sizes of Avery Tractors from the 8-16 to 40-80 H. P. have the low speed, heavy-duty "Draft-Horse" Motor—the motor that gives years of service with minimum upkeep cost. Has Renewable Inner Cylinder Walls, Adjustable Crankshaft Boxes, Valves in Head, Centrifugal Gasifiers that burn all the kerosene, and many other exclusive features.

The power is delivered through the "Direct-Drive" Transmission with only three shafts and straight spur gears between the motor and the drawbar. Belt pulley is mounted direct on the crankshaft—you get all the power of the motor in the belt. That's why the Avery is the real puller in the belt and at the drawbar.

Write for Catalog

Get your Avery now when you need its service most in getting a good crop started for next year. See your local Avery dealer or write us for catalog showing complete Avery line of Tractors, Tractor Drawn or Tractor Driven Machinery

Surveys Grape Growing in South

R. L. Nougaret of the viticulture service of the department of agriculture has just returned from a trip to the grape growing sections of the San Joaquin Valley and southern counties. The object of this tour was to investigate local conditions of those various grape districts and by holding meetings with the grape growers make them acquainted with the special conditions brought about by the enforcement of prohibition laws which so radically affect the wine grape industry and which coincidentally have a direct bearing upon the table grape as well as the raisin industries.

Another message presented to the grape growers was the seriousness of the grape phylloxera infestation throughout the state and a warning as to the care which should be taken in new grape plantings and replanting.

Briefly stated, the main observations made on this occasion can be summed up as follows: Imperial County possesses the unique advantage of producing the earliest grapes of the state. The shipments of Thompson Seedless were over by June 15 and those of Malaga just beginning at this date. Small shipments of Persian No. 2 grapes had preceded the Thompsons. Grapes ripening so early command

very high prices, both on local and Eastern markets, and this advantage predicts a future for Imperial as a grape producing county. The condition of part of the small acreage of grapes now in existence should be a warning to those intending to plant vines that a careful investigation of the soil should first be taken in consideration. A few of the older vineyards are showing signs of deterioration due to mineral salts brought to the surface by irrigation. Drainage might possibly overcome this defect, but thorough experiments should be made to prove this.

Coachella Valley in Riverside County is also a wonderful producer of early fruit and vegetables.

SEPTEMBER COVER CROPS

By Ernest Branton

The planting of winter cover crops will range throughout September. A few will plant during late August and probably an equal number in early October. Vetch is often sown later than melilotus and an occasional planting is made up to November, but 95 per cent of cover crops will be sown in September. A few may drill the seeds in but a dozen orchardists lately interviewed will all sow broadcast, no matter what seed is planted.

As to what to plant, it appears that a decided majority would plant purple vetch, but no seed supply is available. One orchardist, with soil in the best of tilth, said if he could be assured of a favorable season he would plant bur clover, as he was convinced that it is best of all. But ordinarily it starts too late and in unfavorable seasons does not make satisfactory growth. A careful canvass would indicate that orchardists will plant a little heavier acreage of vetch this year than melilotus, as compared with last year's planting. Farm Adviser Hodgson also so reports after talking with scores of farmers. A prominent seedsman told the writer that advance orders show a 25 per cent change in favor of vetch over melilotus.

E. F. Underhill of Glendora said: "I shall plant 45 acres of vetch about September 15, and C. F. Gordon, above my orchard, will plant 100 acres about the same time. In a season of light rainfall melilotus does best generally, but in gravelly soil the larger seeds of the vetch seem to insure a better stand than we can get with melilotus. Those having heavy soil favor melilotus. I shall broadcast the seed following my next irrigation, shall then furrow for irrigation, leave the furrows open and then distribute well about two tons of bean straw to the acre. Some will use three tons of the straw to the acre. This is on loose, light soil only, a necessary mulch."

Other orchardists in the district were also interviewed. One with heavier soil and larger trees than are possessed by the Underhill orchard will sow 20 pounds of melilotus per acre, broadcast, furrow for irrigation and leave the furrows open. He is primarily after humus and says the native malva, *Malva parviflora*, comes up each year with the vetch, grows often to six or even eight feet high with stems as large as a two year old orange tree. He says this weed does more to break up his heavy soil than any crop that grows on it. He will sow melilotus September 5-10, but a neighbor will sow a small orchard to hairy vetch. He said fumigation in that district was generally unsatisfactory last year, but that *Scutellista cyanea* was working well on black scale and had exterminated a light infestation of brown scale. Nearly all in that neighborhood were cultivating August 5, and many will sow cover crops following the next irrigation 30 days later.

BE CAREFUL WITH ARSENATES

California pears received on the Boston market are reported as showing appreciable traces of arsenic. The forwarding of fruit bearing visible evidence of arsenical spraying may subject the goods to the danger of confiscation under municipal or possibly federal law. Rejection or condemnation of California pears under these conditions may have a very serious effect on the market outlet. Packers should be equipped with cotton gloves so that pears showing

cessive amounts of dried spray materials might be handled so as to remove any conspicuous amount of foreign material.

FARM CENTERS WILL MEET AT STATE FAIR

Members of the farm centers from every county in California will be entertained at the state fair by the farm centers of Sacramento County. The arrangements are in charge of Farm Adviser Leonard and Horticultural Commissioner Brosius of Sacramento County. It is proposed to have each farm center in Sacramento County act as host one day each, thus insuring diversified entertainment for the visitors.

Matters of interest to farm centers throughout the state will be the topics for daily discussion. University speakers and practical farmers will address the meetings and every possible problem interesting to the tillers of the soil will be presented for solution. Letters have been sent to all farm centers and Farm Bureau Day, Saturday, September 11, promises to be a big event.

CANNING DEMONSTRATION AT WALNUT CREEK

Recently an interesting and instructive demonstration on home canning was held at the home of Mrs. M. E. Small Jr., Walnut Creek. Miss May Secrest, food specialist from the University of California, demonstrated the cold pack method of preserving fruits and vegetables, the fruit being canned without the addition of sugar. Sixty ladies from all parts of the county were present and expressed themselves as being deeply interested and having received valuable information from the demonstration. If the movement inaugurated by the ladies of Contra Costa County for the stationing of a farm home demonstration agent in the county is successful it will mean that similar demonstrations, not only on home canning but also on all other subjects of particular interest to the farm women, will be a regular thing in all parts of the county. The salary of the home demonstration agent is paid by the state university and the United States department of agriculture jointly, and the county is required to pay only \$1,500 per annum to cover necessary expenses in connection with traveling and office maintenance. Such an appropriation means an increase in taxation of only two cents on \$1,000.—A. M. Burton, Contra Costa County Agent.

TOMATO CROP IN MEXICO

Because of the unfavorable season and the prevalence of various pests, the tomato crop in the state of Sinaloa has been disappointing. Growers had anticipated a crop three times that of last year, which was the best year in the history of the industry, but they will do well to secure crops equal to last year's production, which amounted to about 700 carloads.

LACK OF UNIFORMITY IN FUMIGATION RESULTS

(Continued from Page 211.)

good results. In the case of oranges the season cannot be prolonged in the spring beyond the time of the setting of the fruit. During the winter season, December, January, February, and more or less of March, daylight work is preferable.

Machine Delivery

Our own fumigation work at Corona was more uniform than the commercial work and we were unable to account for this. The same tents were used and the same procedure apparently followed. The only difference between our own work and commercial work was in the manner in which the charge was expelled from the machine. In the commercial work three or four strokes of the pump were all that were given, while in our work enough strokes were made to completely discharge the dosage. This led Mr. Knight to test the machines by making three or four strokes for from eight to 12 successive charges and comparing the delivery with that when the complete charge was expelled regardless of the number of

strokes. When but three or four strokes are given there is great variation both below and over the amount that should be expelled. The supposition has been that what liquid was left in the supply pipe after three or four strokes would be expelled with the following charge. But our tests of the machines have shown that while in a single throw or in an entire grove the total amount expelled is the same, the dosage is not uniform for all of the trees.

The machines were tested with gasoline and with water. Gasoline was chosen because its specific gravity approximated that of liquid HCN. Using a liquid lighter than water made no difference with one of the machines but it did make a difference with the other. Type A machines when completely discharged gave 100 per cent delivery regardless of the specific gravity of the liquids used. On the other hand, when not completely discharged Type A machines showed a considerable variation. The amounts delivered varied from 41 per cent minimum to 125 per cent maximum, or a difference of 83 per cent. This difference in itself might account for failure to kill the scales. Type B machines, while not showing such a marked variation, the highest being 20 per cent, were never entirely accurate, whether completely discharged or not. Uniform fumigation results can only be attained as the factors responsible for variation are determined and so far as possible eliminated. Variation in machine delivery can be eliminated by making enough strokes

of the pump to completely discharge the dosage measured. Whether as much variation in delivery will occur with the improved machines to be used this year we have not yet determined, but our recommendation is that enough strokes of the pump be made to practically expel all of the charge.

Not Due to Liquid HCN

The point has been raised in some quarters that the lack of uniform results is due to the use of liquid HCN. We have been testing that matter since the liquid first came into use three or four years ago and have found no evidence whatsoever to support the contention that the use of liquid HCN is less efficient than the pots or portable generators, providing the equivalent amount is used. This amount, according to our investigations, is 20 cubic centimeters of the liquid to correspond to an ounce as called for in the older schedule, or what amounts approximately to that used today. If there is much discrepancy it is a

shortage in the case of the larger trees. In order to remove any doubt as to efficiency of the liquid we again carried on a series of tests with the liquid and pots last year in the Corona district and the results verified our previous work in that what difference there was was in favor of the liquid rather than of the pot method, that is, the results were more uniform where the liquid was used.

Inefficient Labor

One of the more general causes of erratic or poor fumigation results is inefficient labor during the past two or three seasons. Careless kicking in of the tents and neglect or indifference as regards other operations has been observed frequently, and on account of the general labor conditions it has been very difficult for the fumigation foreman to overcome this entirely. There are other minor causes, such as fumigating in too strong a wind, holes in tents escaping notice, fumigating over rough ground and in cover crops, and so on.

Your Soil Needs Humus and Nitrogen Bacteria

Melilotus Indica Supplies Both

Now is the time to plant it. Buy only seed that has a quality test tag on every sack. It protects you against seed of low germination.

Uniform Cooling Keeps The Engine on the Job

THE cooling system of a tractor gets its real test during the heat of harvest and early fall plowing.

It is then that you can rely upon the Waterloo Boy—the pump, fan and radiator system of cooling always keeps the engine on the job.

WATERLOO BOY
BURNS KEROSENE COMPLETELY

To secure uniform power you must have uniform cooling. The pump, fan and radiator system used on the Waterloo Boy positively assures uniformity in circulating cooling water.

It holds the engine at the right temperature for proper lubrication, and maintains sufficient heat to insure complete combustion and full power from the fuel.

An even temperature is maintained at all operating speeds because the speed of the pump and fan is automatically controlled by the speed of the engine.

You get a big radiator on the Waterloo Boy. It holds thirteen gallons. You won't find it necessary to stop in the field every few hours on a hot day and fill it.

The cooling system is but one of the Waterloo Boy's superior features. Its simplicity and accessibility, its powerful 12-25 H.P. engine, its ability to burn kerosene and burn it right, its Hyatt roller bearings that eliminate friction, and a drawbar shift lever that gives you the correct line of draft on all tools, all contribute to make it a real farm tractor.

We want you to read a booklet describing the Waterloo Boy. Write for it today. Address John Deere, Moline, Illinois, and ask for Booklet WB-67.

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

John Deere Implements, Waterloo Boy Tractors and Kerosene Engines are distributed from all important Trading Centers. Sold by John Deere Dealers everywhere.

DE LAVAL IRRIGATION PUMPS

High Efficiency Saves Power

The above illustration shows a cross section of the DeLaval double suction single stage irrigation pump. Each separate part bears a symbol or number. These numbers are stamped on at factory.

All parts are interchangeable and bothersome misfits are eliminated. In ordering parts for a DeLaval all that is necessary is the part's symbol.

This is another of the many points of DeLaval efficiency.

This is one of a series of advertisements explaining the different parts of the DeLaval Irrigation Pump.

THE AMERICAN

Horsepower

By L. J. Fletcher

HAT is horsepower?

Horsepower can not be measured in pounds pull or in miles per hour, but is made up of both. Contrary to popular opinion, the unit horsepower was actually derived from the amount of work a horse can do.

Force is defined as that which tends to produce motion, while work is force moving a certain distance. Power is the rate of work.

Force is measured in pounds, while work, being a product of a force in motion, is measured in foot pounds. For instance, if a man lifts a 100 pound box from the ground to a platform three feet high, he does 100 pounds by three feet, or 300 foot pounds of work. Power is measured in horse power.

In using horses for raising coal from the mines in England it was determined that the average draft horse, weighing about 1,500 pounds, could raise 150 pounds of coal while walking at the rate of 2 1/2 miles per hour and keep working at this rate all day. Two and one-half miles per hour is equal to 220 feet per minute. So the mechanical horsepower, as it is called, really originated with horses and is equal to 150 pounds by 220 feet per minute, or 33,000 foot pounds per minute.

If a tractor is exerting a draft (or pull) of 2,000 pounds while plowing, it is doing work. The amount of power developed, then, depends entirely upon the speed. If moving two miles per hour the horsepower developed would be 176 feet per minute (equivalent of two miles per hour), multiplied by the force, 2,000 pounds, and this product divided by 33,000, giving 10.7 horsepower. However, if the speed of plowing was 2 1/2 miles per hour the power developed would be 220 by 2,000 divided by 33,000, or 13.3 horsepower.

The term "actual horsepower" is sometimes used. This is an attempt to confuse power with force, or, in other words, to compare simply the amount a tractor can pull with that of an equal number of horses, regardless of the speed of either. The horse has one big advantage over the tractor, and that is, when sufficiently urged the average horse can for a short time exert a pull equal to one-half to three-fourths of his weight. Horses tested for maximum horsepower, or effort, often develop from six to seven horsepower for from ten to 15 seconds at a time.

The horsepower rating of a tractor is usually given in two numbers, 10-20, 12-25, 30-60, etc. The first number represents the draw bar horsepower or is the indication of the amount of work the tractor can accomplish when pulling plows, harrows, etc.

The second number is the horsepower of the motor in the tractor, or the belt horsepower. It is commonly called the brake horsepower because in testing the tractor a large brake is attached to the pulley wheel and the amount of power determined. This is the horsepower available for operating such belt driven machines as pumps, threshing machines, ensilage cutters, etc.

It is interesting to compare the belt horsepower capacity of a tractor and a horse. The tractor when pulling a plow uses up about one-half the power of its motor in moving itself, thus the rating 10-20, etc. However, when it is doing belt work it is not moving itself, so all of the power of the motor goes into useful work.

Since no one has yet perfected a stationary attachment for a horse, he must move himself when being used for operating belt driven machines. Thus while the tractor is nearly twice as efficient when doing belt work, the horse is less efficient on the "belt" than the "draw bar."

This accounts for the early use of the gas and steam engine for stationary work, and the more recent use of tractors for field road work.

While the work involved in testing a tractor for draw bar horsepower is slight, few tractor users possess an instrument for determining the amount the tractor is pulling. Often, when a rancher complains of his tractor not pulling enough, tests have shown that due to poor adjustment or condition of the plows, or character of the soil, the tractor is developing more than its rated horse power or is actually overloaded.

Increased Production

By G. H. Hecke

For the next three or four years the increased production of agricultural staples will determine largely the restoration of world affairs to former placid conditions. This is a matter of cold fact. Europe, at best, must have four years to recoup her depleted agriculture. Argentina may produce some surplus beef and hides; Australia her usual quota of fruit and mutton; Canada, grain and dairy products; but it is the old guard, the American farmer, whose timely and well ordered activities until the year 1925 will determine the real world struggle of providing the actual agricultural products required to sustain the needy millions of all nations and races—no longer bounded by formal lines, but including the Orient and Occident alike.

As in every crisis in the past we must be prepared for untoward physical conditions which may only serve to aggravate and intensify a distressed situation. Unheralded climatic conditions, early or late frosts, excessive drouth and unforeseen crop failures, not alone in this state and country, but indeed in the farming centers of foreign countries, are neither improbable nor unlikely. Speaking for California agriculture, we may say generally that in the past we have been blessed with years of plenty, when compared with uncertain, disastrous agricultural ventures in other parts of the world, and now, without a vestige of pessimistic forecast, but with forethought and prudence, farmer and business man alike should prepare for "the seven lean years." That the lean years may fail to materialize for us will be a matter of good fortune and would serve to release for inland use and for export such of the foodstuffs

in excess of our own needs as could be spared, beans, rice, cereals, dried fruits, animal and dairy products, cotton, etc.

A market is waiting for every pound and ton of such staples that California can produce, and at values which will equal those of former years, provided the labor now concentrated in better paying city work will permit intensive production.

In order to secure the maximum results from our agricultural activities it is necessary and indeed vitally essential that a better and closer understanding be promoted and fostered between the farmer interests and our city business, since it is only through the well being of each that the other may hope to reap the benefits that properly should accrue.

We must come to realize that this matter has now assumed the aspect of a national issue, and no expense of county, city, state or even the nation will be too great if it will insure an ample supply of staples to meet the world's demand for the coming four years.

MARIOUT BARLEY

Prediction that Mariout barley introduced by the agricultural experiment station of the University of California eventually will replace the common barley over large areas to which it is adapted, as already it has in Yolo and Solano Counties, is made by authorities at the college of agriculture, based on returns of a recent census by G. W. Hendry showing that 40,000 acres have been grown to Mariout by 400 growers in 25 counties of the state.

Mariout barley is leading common barley in yield this season by more

than four sacks per acre. While not regarded as superior under all conditions, the value of Mariout has been well proved on dry light soils, in hot, dry localities, and for late planting. Of the million and a quarter acres of land usually planted to barley in California, it is estimated that approximately 800,000 acres of it is better adapted to Mariout than to common barley. Had all of this area been planted to Mariout the value of the barley crop would have been greatly increased, according to Professor Hendry.

Growers in the Sacramento and San Joaquin Valleys and in Southern California send reports of yields of Mariout and common barley that make most interesting reading. The Cultivator gives a few of these reports in following text:

E. Clemens Horst Company of Los Molinos, Tehama County, averaged 33 1/3 sacks of Mariout per acre as against ten sacks per acre for common barley under similar conditions.

A. H. Eager of Red Bluff, Tehama County, secured a yield of 19 4/7 sacks per acre of Mariout as compared with 10 1/3 sacks per acre for common barley.

H. H. Dopkins of Arbuckle, Colusa County, reports six sacks per acre for Mariout and three for common.

S. A. Mealey of Gridley, Butte County, reports 30 sacks per acre for Mariout and 23 sacks per acre for common barley.

J. P. Samuelson of Durham obtained 29 sacks per acre from Mariout and 14 sacks per acre for common barley.

P. W. Doty of Turlock reports Mariout at 34.6 sacks per acre and common barley at 28 sacks per acre. Mr. Doty states: "I find three very distinct reasons for raising Mariout here. First, it ripens two weeks earlier than common barley, making it exceptionally well adapted for double cropping land. Beans can be put in early in June. Second, it stools well and with very sturdy straw which is not coarse and brittle, and, third, the percentage of shattering in the field is small as compared with common barley."

J. G. Henwick of Modesto reports Mariout to have yielded 25 sacks per acre and common barley 21 sacks per acre, and states: "I believe Mariout barley is best suited to conditions here on account of early maturing, which means about 15 days, and especially for double cropping on irrigated land. I seeded 500 pounds and threshed 230,000 pounds. I will sow it again this fall."

F. W. Voorhies of Ripon, San Joaquin County, grew Mariout and reports a yield of 25 sacks per acre. Common barley under similar conditions yielded ten sacks per acre.

A. W. Norcutt of Sanger, Fresno County, planted 28 acres of Mariout which yielded 16 1/2 sacks per acre. Common barley yielded only ten sacks per acre.

W. K. Chestnutwood of the Stockton state hospital at Stockton put in 50 acres of Mariout, which yielded 30 sacks per acre. He had no common barley with which to compare it, but thinks Mariout better adapted to his conditions.

Robt. F. Schmeiser of Corcoran, Kings County, planted 1,280 acres of Mariout under adverse conditions in the Tulare Lake bottom, which yielded four sacks per acre. Common barley under the same conditions gave no yield.

H. L. Roberts of Beaumont, Riverside County, reports yields of 25 1/2 sacks per acre from Mariout and 17 sacks per acre from common barley. Says Roberts: "I think Mariout is the coming barley, but believe I planted too early (November 10, 1919), and it headed out so quickly that it was frosted some."

C. V. Storm of Winchester, Riverside County, reports yields of 25 sacks per acre from Mariout and 14 sacks per acre from common barley.

Geo. Dawson of Del Mar, San Diego County, reports Mariout to have yielded 20 1/2 sacks per acre and common barley 17 sacks per acre.

Chas. Madsen of Lompoc, Santa Barbara County, reports Mariout at 14 sacks per acre and common barley at nine sacks per acre.

Donald C. Ingersoll of Encinitas, San Diego County, reports Mariout to have yielded 23 sacks per acre and common barley 15 sacks per acre, and concludes that Mariout is a wonderful crop for the light mesa soil of San Diego County.

Summer Pruning Apricots

Would you advise dormant pruning or summer pruning on six year old apricot trees which are much too bushy and where much wood will have to be cut out? Work to be the new style of thinning out only?—Subscriber, Etiwanda.

In answering there are probably two main points to consider: (1) During the early part of the season most of the organic food which is manufactured by the leaves is immediately utilized in the formation of new wood, twigs, branches, additional leaves and in the development of the fruit. This is, of course, of much importance. Nevertheless, the apricot tree has practically no excess food which it

can store up for the next spring's growth until some time after the crop is removed and length growth has largely ceased. Neither has it been able to complete the development of strong plump fruit buds for the next year's crop or to increase the stored plant food reserve. The flowers which bloom, the leaves which push out, and the first early growth which will be made this next spring will all be done at the expense of the plant food, sugars and starch, which will be manufactured by the leaves and stored in the tree largely throughout the late summer months and early fall after the time of fruit harvest. (2) The apricot, however, matures its crop fairly early in the summer and produces as a rule a great abundance of leaves. These leaves, in addition to manufacturing plant food, also permit the loss of a lot of water by evaporation through minute openings upon their surface. In dry years the limiting factor may, therefore, not be insufficient leaf area for the manufacture of plant food, but too much soft, tender, succulent tissue which evaporates large amounts of water. This may result in suffering on the part of the tree from lack of water to such an extent that the normal function of the leaves in the manufacture of plant food may be interfered with. With the apricot, then, under some conditions, judicious summer pruning may be understandingly practiced. Indiscriminate summer pruning may severely weaken the tree and is to be avoided. The removal of mature limbs which have ceased length growth, or of leaves that are healthy and firm, reduces the amount of plant food that may be "digested" and stored during the remainder of the season. Furthermore, if summer pruning is severe enough to induce the production of late new tender twigs and leaves this draws upon the stored plant food and results in a thinner, weaker sap just when the tree should be storing instead of using up stored food. Such a late growth does not have time to ripen up or mature properly and is quite likely to dry out or be otherwise injured during the winter. Proper, conservative summer pruning consists in removal of any surplus, tender succulent water sprouts that are growing where they are not wanted. Any permanent limbs that are becoming excessively long and continuing length growth too late may be checked by lightly clipping them back. Dead, broken or diseased parts should be removed. So long as the trees can obtain sufficient water to supply their leaves it is not, as a rule, desirable to reduce the leaf surface at this time of the year. If drouth is severe and the trees are evaporating more water than can be supplied and give evidences of distress, the evaporating surface may be reduced by judicious thinning out of the rank growing water sprouts, or the more tender, succulent parts which are least needed. In general, one can state, "Don't do heavy pruning in the late summer. Wait until winter and the leaves are off."—E. L. Overholser.

Rabbits Destroy Trees

Will you suggest some practical method for controlling or eliminating rabbits, which are seriously damaging a young citrus orchard of mine? I have the usual protectors around the trunks but they reach up above these and chew the crown of the tree. Poisoned barley is not effective, though used very extensively. Have caught a few cottontails but none of the "jacks," which are doing the damage. Wire fencing for 20 acres is nearly prohibitory as to price.—Subscriber, Upland.

Of course the best of all protection from jackrabbits is rabbit proof fence. Next best is perhaps organizing the neighborhood in a rabbit drive. Poisoning, using watermelon rind or some similar bait is only partially successful. If a drive can be staged during midwinter months there is possibility of disposing of both meat and fur to slight advantage. Meantime wrap the trees higher if possible. Newspapers have been found very satisfactory. The rustle of the paper seems to frighten them away. Another preventive of injury to trees is the use of bacon rind or the fat of pork rubbed over bark or trunk. Any animal fat or blood freshly applied on the tree

The TULSA

The attractive body lines of the TULSA, with its numerous refinements and comfort features will captivate you. But the true greatness lies in the Chassis, which has won it fame and prestige. It is powered with the famous Herschell-Spillman 4-cylinder motor—noted for its flexibility, power and economy in gasoline and oil.

The low hung body and perfect balance eliminates side slip and sway—keeps the car to the road. Long resilient springs and deep upholstering carry you over the rough spots with velvety smoothness. The dry disc clutch operates smoothly at the slightest touch. Gears can be shifted with the finger tips.

The TULSA steers without the usual pull and strain at the wheel—one reason why it's so popular with women drivers. By its rapidity of pick-up, ease of hill climbing, sureness of sustained speed and nicety of control, the TULSA is absolute master of every situation.

Ask your nearest dealer to point out its standard units and many excellent features, and demonstrate its ability to perform under the most trying conditions.

seems to be repulsive to the rabbit. A heavy application of lime-sulphur wash is also effective. Wood veneer protectors or chicken wire fencing, gunny sacks, corn stalks, or other similar substances also afford protection.

Sulphuring Thompson Seedless

Will you please tell me how to sun dry and cure Thompson Seedless grapes for raisins. Is it advisable to use sulphur, and if so, how is it used? —Subscriber, Anaheim.

I should judge that Thompsons could be dried in the sun at Anaheim without the use of sulphur. Sulphur is used in some cases to make bleached Thompsons, but it spoils the real raisin flavor. If weather conditions are such that the drying operation must be hastened, it would be better to dip the fresh fruit in a one per cent hot lye solution for a short time. After they have been carefully rinsed in fresh water they may be spread on trays and dried in the sun in the usual way. When the surface of the fruit which is exposed to the sun becomes dark colored it should be turned so as to expose the other side of the bunch to complete the drying. Some of the fruit will dry more quickly than the rest and the moisture content is evened up by packing in boxes and allowing it to go through a sweating process.—F. K. H.

Red Spider on Berries

How can I get rid of red spider affecting berry plants? The plants give me no fruit whatever.—T. Tokuyama, El Monte.

Sulphuring with a good dusting machine is the best method. This should have been done much earlier in the season. However, some of next year's red spiders may be kept away by thorough dusting at this time. This work should begin in April of another season and before the spiders make their appearance.

Drilling Granite

Is it possible to drill through hard blue granite?—Subscriber.

Yes, the diamond drill will negotiate any form of granite.

Bean Blossoms Blight

Please tell me why my Kentucky Wonder beans do not produce. They look green and healthy, bloom well, but the blossoms drop off. I keep them well watered and cultivated.—Subscriber, Upland.

This appears to be mildew. Beans should be sprayed (dusted) with sulphur just before the blossoms appear, and if mildew is persistent or generally prevalent in the district dust again when green beans are nearly ready to pick. Better also irrigate and sprinkle after sundown or at least late in afternoon.

Roses and Oranges

Kindly let me know what can be the matter with my rose bushes. The canes seem dry and lifeless and there is no new growth. They bloom, but each bloom gets smaller. Treated them for rust early part of season with Bordeaux mixture, and the rust has left. I water them well every seven or ten days, also sprinkle the foliage; also have sulphured them before sunup about four times this summer, Bordeaux about three times and once sprayed them with atomic sulphur and arsenate of lead (liquid), but a veil or web forms over the bushes just the same. The roses are out in the open, 15 feet from house, and clean cultivated; not a weed near. Also, after watering I cultivate the soil. Have used these same methods on young orange trees, but the leaves curl up and get thick and tough as fast as they grow out.—Subscriber, Glenn.

The leaf curling symptoms would suggest the presence of aphid and if so spraying with 40 per cent nicotine sulphate, diluted according to directions on the package, would easily control them. But with the eight sprayings mentioned, added to frequent sprinklings with water, it is not probable aphid could multiply fast enough to cause the condition described. Is it not possible that soil conditions are at fault?—E. B.

Acreage Added with a CATERPILLAR Land Leveler

Reg. U.S. Pat. Off.

EVERY ACRE of waste land made useful is as truly an addition to the farm as is new land acquired by purchase.

The "Caterpillar" Land Leveler makes unproductive land profitable. Farm values can be increased by filling up low spots, cutting down ridges, and perfecting drainage, thereby making cultivation easier, less expensive, better.

In road building the "Caterpillar" Land Leveler has no equal. Fields can be graded as level as roads, and roads can be improved to make transportation to market or railroad more rapid and less costly.

You'll find the "Caterpillar" Land Leveler in use for small leveling operations on individual farms as well as for the biggest reclamation projects. In many cases its use has been adopted after unsatisfactory attempts to do the work with other equipment.

Large Premiums

PRIZE money of \$55,000 announced in premium lists mailed last week to 3,500 livestock breeders and exhibitors from Missouri River points west, together with the comprehensive entertainment and educational features planned, is creating tremendous enthusiasm in the Los Angeles Livestock Show, October 2-10, according to E. W. Murphy, president of the association.

"Letters pouring in reserving display space prove that Los Angeles is receiving the cooperation of the entire West in staging a really great exhibition," says Mr. Murphy.

Some of the world famous farm animals to be exhibited at the show include: Jumbo Sensation, a Duroc boar, valued at \$15,000, of Tu-Tuck-A-Nula Ranch, Van Nuys, owned by Mrs. R. E. Whitley; four Durocs, worth \$32,000, from the Diamond Bar Ranch, Spadra; King Korndyke Pontiac Acme, the prize Holstein bull, costing \$41,000, owned by Anita M. Baldwin; and a herd of 28 Guernsey cattle, which have proved their superiority at national stock shows, from the Edgemoor Farm, Santee, Walter H. Dupee, owner.

A high grade horse show is being arranged by Directors R. L. English and T. H. Dudley and Manager C. R. Thomas. Premium lists offering \$7,500 in cash prizes are expected to bring here the finest exhibition horses in the West. Already several carloads are promised from Seattle, Portland, Tacoma and San Francisco. The show will be managed by T. T. Strain of Portland. Prof. E. A. Trowbridge of the Missouri state college will judge the horses.

Each of the eight classes draw prizes of \$125. Championship stakes are \$500.

A synopsis of premium list for the Livestock Show follows:

Cattle entries close September 5.

Beef Breeds

Shorthorns: First prize, \$50; second, \$40; third, \$30; fourth, \$20; fifth, \$10. Champions and grand champions, \$50 to ribbon. Herds, \$70, \$60, \$50, \$30. Groups, \$70, \$60, \$50, \$30, \$20.

Herefords: Prizes, \$25, \$20, \$15, \$10, \$5. Champions, \$25 to ribbon. Herds, \$35, \$30, \$25, \$15. Groups, \$35, \$30, \$25, \$15, \$10.

\$750 will be added to the above classes by the American Hereford Cattle Breeders Association.

Wednesday, October 6, American Polled Hereford Breeders Association will hold a public action sale of high class registered Polled Herefords.

Aberdeen-Angus: \$25, \$20, \$15, \$10, \$5. Champions, \$25 to ribbon. Herds, \$35, \$30, \$25, \$15. Groups, \$35 to \$10.

Special premiums are offered by the American Aberdeen-Angus Breeders Association: First prize, \$30; second, \$20; third, \$14; fourth, \$10; fifth, \$10.

Fat Cattle: \$40, \$30, \$20, \$10.

Beef Cattle, Car Lots: Steers or heifers, 15 head, over 18 months old, first prize, \$400; second \$300; third, \$200. Registered bulls, car lots, any breed but not mixed, over 12 and under 30 months old, prizes, \$400, \$300, \$200.

Dairy Cattle

Holstein-Friesian: \$20, \$15, \$10, \$5, \$5. Champions, \$20 to ribbon. Herds, \$25 to \$5. Groups, \$20, \$15, \$10, \$5; five cows in milk, \$25, \$20, \$15.

The Holstein-Friesian Association will add 20 per cent to every award made in classes 1 to 13 and in herds. Also a silver cup for best exhibitor's herd of registered Holstein-Friesian.

Jersey, Guernsey and Ayrshire: \$20, \$15, \$10, \$5, \$5. Champions, \$20 to ribbon. Herds, \$25 to \$5. Groups, \$25 to \$5.

The Ayrshire Breeders Association will present a silver medal to the exhibitor winning the most money in single classes on animals bred and exhibited by himself.

Dairy Shorthorns and Dutch Belted: \$15, \$10, \$5, \$4. Champions, \$15 to ribbon. Herds, \$20 to \$10. Groups, \$15 to \$10; five cows in milk, \$25 to \$15.

Brown Swiss: \$15 to \$4. Champions, \$15 to ribbon. Herds, \$20 to \$10. Groups, \$25 to \$10.

Horses, Asses and Mules

Entries close September 5.

Percherons, Belgian, Shire, and Clydesdale: Stallions, \$25 to \$2; mares, \$25 to \$2; champions, \$20 to ribbon; groups, \$20 to \$4; grand display, \$20 to ribbon.

Light Horses, Standard Bred: Stallions, \$20 to \$4; mares, \$20 to \$4; families, \$25 to \$10.

Thoroughbred Horses: Stallions, \$20 to \$10; mares, \$20 to \$10.

Jacks and Jennets: \$20 to \$4; foals, \$10 to \$5; groups, \$20 to \$10.

American Saddle Horses: Stallions and mares, \$20 to \$4; families, \$25 to \$10.

Arabian Horses: Stallions and mares, \$20 to \$10.

Swine

Entries close September 5.

Berkshire, Poland-China and Duroc-Jersey: Boars and sows, \$10 to \$2; champions, grand champions, herds, groups, fat barrows, \$12 to \$2.

National Duroc-Jersey Record Association offers special prizes of \$25 to \$8, to which the Livestock Show will add \$25 in each section.

Hampshire: Prizes, \$12 to \$2 in all classes, to which \$254 will be added by the American Hampshire Record Association.

Chester White and Yorkshire: Prizes, \$12 to \$2 in all classes.

Boys and Girls Pig Club Specials—Duroc-Jersey, Berkshire and Poland Chinas: Boars and sows, \$6 to \$2; sow and litter, \$10 to \$6. Fat hogs, \$10 to \$2.

Sheep

Entries close September 5.

Rambouillet, American or Delaine Merino, Corriedale, Shropshire, Hampshire, Southdown, Cheviot, Dorset Horns, Cotswold, Leicester, Romney, prizes \$12 to \$4; fat sheep, \$15 to \$5; car lots of 35 head of sheep, \$100, \$75, \$50.

Goats, Milk

Entries close September 5.

Anglo-Nubian, Saanen, Toggenburg, American Anglo-Nubian, American Saanen, Angora, prizes \$10 to \$4.

Poultry, Rabbit and Pigeon Department

Entries close September 15.

Premiums: Poultry and rabbits, first, \$2; second, \$2; third, \$1. Exhibition pens, poultry, first, \$5; second, \$3; third, \$2.

Special and sweepstakes prizes in poultry department, \$20 to \$5; rabbit department, \$20 to \$2; pigeon department, \$10 to \$5; commercial poultry, \$10 to \$1.

Livestock Insurance

The fall fair and exhibition season is at hand. THE HARTFORD LIVE STOCK INSURANCE COMPANY will insure your show stock (horses, mules, jacks, cattle, registered milch goats, and registered swine) against death from any cause, while at home or on the road, including the hazards of transportation. Policies broad and liberal; rates reasonable—yet adequate to insure prompt settlement of claims. Before shipping see the Hartford Agent in your town or address

Milk Costs in Northern California

B. F. McLeod, cost accountant for the Northern California Milk Producers Association, has submitted the following semi-annual report covering the cost of milk production for the six months ending May, 1920, in ten dairies owned by members of the association:

Twenty dairymen promised to keep accurate accounts of feed, etc., and report same each month, but only ten of them have furnished the necessary data to make it possible to carry on this work. The basis used in this work is as follows:

The interest allowed on investment is six per cent, which is only allowed on the stock, dairy buildings, equip-

ment and land actually covered by the buildings and corrals. Five dollars per cow for the number of cows milking during the month, plus ten per cent of the net milk credits is allowed for labor. This basis seems to suit equally well both large and small dairies. Records cover ten dairies ranging from ten to 125 cows. The average number of cows in the ten dairies is 400. For depreciation I have allowed 15 per cent on stock, five per cent on buildings and ten per cent on equipment. Actual amount paid for insurance and taxes is used.

The credits include: Calves born, at actual value; manure at \$10 per cow per year; milk used on the ranch;

sacks and hides sold, as well as all milk sold. A permanent record is kept, including complete account of feed used, average production and but-terfat test of each dairy.

Three of these dairies fed hay, concentrates and silage, and their average production per cow was 732 pounds per month. The other seven fed principally hay and no concentrates, and their average production per cow was 592 pounds per month.

The average feed cost per month for all was \$13.85 per head per month. While the two dairies that have made the best showing in every way—one of which, No. 6, feeds approximately 33 per cent hay, 47 per cent concentrates and 20 per cent silage, and the other, No. 1, feeds 63 per cent hay, 35 per cent concentrates and 12 per cent silage—have shown an average feed cost per head per month of \$13.82, which seems to show that the average production may be increased and the cost of production may be reduced by proper feeding.

The fact that during the month of April the cows had plenty of green pasture greatly reduced the cost at

that time, but as the average production is increased from the same cause, making the supply greater than the demand, the net amount received is also much lower during this month.

The following shows the average cost of milk per 100 pounds and the average net amount received for same:

December, 1919—Average cost per 100 pounds, \$5.20; net amount received, \$3.42.

January, 1920—Average cost per 100 pounds, \$6.07; net amount received, \$3.57.

February, 1920—Average cost per 100 pounds, \$5.54; net amount received, \$3.08.

March, 1920—Average cost per 100 pounds, \$4.24; net amount received, \$2.84.

April, 1920—Average cost per 100 pounds, \$2.73; net amount received, \$2.79.

May, 1920—Average cost per 100 pounds, \$3.52; net amount received, \$3.08.

Average for the six months: Cost per 100 pounds, \$4.55; net amount received, \$3.13.

Silo Filling Time

Corn canning time, that period when a portion of the corn crop is prepared and sealed in the silo, will soon be here. Every silo owner should see that the structure is in best condition to receive the succulent corn crop.

As the farmer gives the silo the thorough "once over" he must look out, first of all, for proper protection for the interior, according to United States department of agriculture specialists. The annual application of a mixture of coal tar and creosote, both inside and out, adds greatly to the life of a wood silo, as it protects the wood against decay. The coal tar creosote solution is relatively inexpensive and the cost of treating the silo with this material is so slight that no silo owner should allow his silo to stand without this protection. It is also essential that he tighten loose hoops in order that no cracks or crevices allow air seepage. If the hoops have been kept tight, however, during the period that the silo is empty, they should be loosened just before filling to prevent buckling or breaking of hoops due to swelling when the dry staves absorb moisture from the green silage.

In the case of wooden silos it may be advisable to cement around the bottom of the silo where the foundation joins the superstructure. In the case of old silos it will be profitable for the farmer to go over them carefully to look for cracks, and wherever he finds them to seal with tar and oakum, wood filler or other effective material. If the bottom of the silo has decayed slightly the owner may saw off whatever amount is necessary, and then, by the use of blocking, gradually lower the silo to the foundation again, cementing around the base as previously described.

When the silo is air tight and able to stand the most rigid inspection, the owner may consider the actual work of filling. A wise precaution is to place several feet of straw in the bottom of the silo to act as a protective blanket between the bottom of the silo and the feed, as ordinarily silage juices collect there unless proper facilities for drainage are provided and the straw acts as a valuable absorbent for this excess of moisture which otherwise might damage the bottom silage.

In the actual operation of filling the silo it is of paramount importance that no air pockets be left; this is prevented by sufficient tramping. It depends largely on the diameter of the silo how many men should be used to tramp the ensilage, but even in silos as small as 12 feet in diameter, if sufficient help is available, at least three men should be used, with an increase in the force as the size of the silo increases.

The proper sealing of the silo also is important, because where the silo is correctly topped off there usually is a minimum loss of the succulent feed. A good plan is to snap the ears from the last three or four loads of corn that are run into the silo. Straw or coarse hay may also be used as a topping. Then oats may be sown over the top of the contents after it has been thoroughly moistened, if neces-

sary, although as a rule the corn, if cut at the proper stage, is moist enough without extra watering. The oats sprout and form a dense blanket which prevents the ensilage from spoiling.

PREPARE GILTS NOW FOR SPRING BREEDING

Help the gilts now to develop and get in condition for breeding next spring. By August, in practically all sections of the country, the gilts farrowed last spring and selected for future breeding work are weaned and ready to be primed for next season's work.

A brood sow to be conditioned properly should be in such flesh at breeding time that she will gradually increase her weight according to normal and natural development from that period until the date of farrowing. In order to maintain her in desirable condition, she must be supplied with plenty of protein. Whole oats fed in a self feeder is an excellent nutrient for growing gilts. In addition, the young females should have access to good forage crops such as alfalfa, clover, rape, rye, or any of the other small grains. A small allowance of corn is also advisable. Shorts or middlings can be fed with considerable success. A combination recommended by specialists of the United States department of agriculture consists of a mixture of shorts or middlings, oats supplied in self feeders, corn in limited quantities and succulent pasture ad libitum.

Gilts should not be allowed to fatten materially, as ordinarily a fat sow is a poor breeder and mother. On the other hand, a well grown gilt which is not allowed to store up surplus avoirdupois makes a satisfactory brood sow for the following year if she is properly handled, other conditions being equal.

NEW BERKSHIRE SALE RECORDS

Three world's record prices were broken at the recent Berkshire sale held at the Gossard Breeding Estates in Indiana. Epochal Laurel, an 11 months old Berkshire boar, sold for \$6,500, a new world's record price for a Berkshire boar at public auction. He was bought by Cyril Maitingly of Indiana. This boar is a son of Laurel Champion, out of a daughter of Epochal. The second world's record was made when the sow, Epochal's American Mayflower 6th, brought \$3,900. She went to Paul Fitzsimmons of New Hampshire. This sow was a big winner at the largest state fairs and at the National Swine Show last year, and is a sister to Epochal's Thor, the first prize junior yearling boar at the National. Epochal's American Mayflower 6th was safe in pig to Laurel Champion. The third world's record broken was that for the average price at any public sale of Berkshires. This sale averaged \$665.30.

Simple and Sanitary Teat-Cups

The simplicity of construction of the De Laval teat-cups is plainly shown in the illustration. They are easily

taken apart and put together, and very easy to clean and keep clean.

The rubber lining is simply a straight piece of rubber tubing. It is small enough to fit the smallest teat and is held in the metal casing, which is large enough to fit the largest teat. Hence the De Laval teat-cups are self-adjusting. They are made in only one size, which fits all teats.

The liner is made of pure rubber, scientifically correct in construction and design, producing a massaging action on the teat between suction periods.

A flexible rubber mouthpiece is formed by the top of the liner in such a way that no metal touches the teat.

The De Laval Milker is faster, more economical and more reliable than any other method of milking. The sanitary features are of special importance. It is quickly and easily cleaned, and is used by many dairies in A. R. O. work and where certified milk is produced.

An additional insurance of lasting satisfaction to users of De Laval Milkers lies in the De Laval Company's well-known facilities and reputation for service.

San Francisco, Cal.

WHO WILL OWN HIM?

There are only two cows in the world that have ever produced over 33,000 pounds milk in one year—Tilly Alcartra and Zarilda Clothilde 3d De Kol. There are only four bulls of service age in the world having dams that have produced over 33,000 pounds milk in one year.

COLONY ZARILDA NEWMAN

is one of the four, and he will sell at public auction, to the highest bidder in the Complete Dispersal of the WM. M. BRAY HERD

50—HIGH CLASS REGISTERED HOLSTEINS—50

State Fair Grounds, Sacramento, Cal., Thursday, August 26, 1920 at 10 A.M.

The offering consists of 47 females and 3 bulls, a splendid herd of young, healthy cattle of exceptional type and backed by some of the breed's greatest production.

A large number of granddaughters of MARGIE NEWMAN, the former world's record milk cow, will be in the sale, including a great 7 year old cow that made 31.60 lbs. butter in 7 days from over 740 lbs. milk as a junior 4 year old. Also a large number of young cows and heifers out of dams with official records up to over 31 lbs. butter in 7 days.

The foundation of this herd originally came from a federal accredited herd and a herd under federal test. It has passed two federal tests and one by a state authorized veterinarian without a reactor. There has never been a case of abortion in the herd.

Every animal positively guaranteed to be a breeder; every animal over six months old tuberculin tested and sold subject to retest by the buyer.

Practical Disinfecting

Realizing the necessity for uniformity in methods and a more thorough knowledge of the germicidal properties of various disinfectants, the division of animal industry of the state department of agriculture recommends the following procedure.

When a barn or stable is to be disinfected, three factors should be considered: First, the preparation of the building so ordered as to be able to get to the bacteria with the disinfectants; second, the application of a disinfectant that is actively germicidal; third, an effective method of applying the disinfectant.

Making Ready

A certain amount of essential preliminary work should be done to get the building in shape for maximum results. The walls, ceiling, partitions, etc., should be thoroughly swept to remove all dust and cobwebs. Any adhering filth should be removed by scraping and scrubbing vigorously all such areas with a strong lye solution and a stiff brush. All soft or porous wood that might absorb disease germs should be burned. Manure and all other refuse from the stable and barn should be removed to a place to which animals do not have access. It is better to burn it or saturate it with a solution of chloride of lime in the proportion of six ounces of the lime to one gallon of water. When this is not possible it should be spread thinly over the ground and exposed to sunlight and air which will in time render it harmless. In either case, however, livestock should not be permitted to come in contact with it.

If the floor is of earth, it is practically impossible thoroughly to disinfect it, but much good can be accomplished if about four or five inches of the surface soil be removed and disposed of in the same manner as the manure. The dirt used to replace that removed should come from an uncontaminated source. In all cases, if possible, a concrete floor is recommended for the reason that it is sanitary and durable.

Selecting Disinfectant

With the field of operation now prepared, the next consideration is the selection and preparation of a disinfectant. The germicidal strength and properties of solubility of this agent should be known and when applied must not be dangerous to animal or man.

There are thoroughly dependable dips and disinfectants manufactured by reliable concerns which are available. While some of these are proprietary articles, their effectiveness, ease with which they are used and the fact that full directions are given on the package make them most attractive to all stock owners. Chemists have made most thorough investigation and fitted these products to almost every situation which may arise on the stock ranch. These are often advertised in the columns of the California Cultivator and may be had from dealers in livestock supplies.

Applying

The best method of applying the disinfectant is by means of a strong spray which will not only cover but will penetrate cracks and crevices. After the disinfectant has been applied, the walls, ceilings, partitions and pillars should receive a coat of limewash. This is prepared by adding four ounces of chloride of lime to each gallon of water. Wagons used for hauling infected litter, dirt, etc., should be thoroughly cleaned and disinfected.

Watering Troughs

Since watering troughs play an important part in the transmission of disease, they also should be thoroughly disinfected in a most thorough manner. Each trough should be emptied and thoroughly scrubbed. This done, the trough should be filled with either of the previously mentioned disinfecting solutions and left covered for 24 hours. At the end of this time disinfection should be complete. The solution is then drawn off and the troughs thoroughly rinsed to remove all traces of the disinfectant.

Harness

Harness and other leather should be

cleaned by scraping and washing. All such materials should be immersed in the disinfecting solution for a period of six to eight hours. They should then be rinsed in clear water and dried, after which they should be oiled in order to prevent them from cracking or becoming brittle.

Brushes, cars and currycombs may be factors in transmitting disease. They also should be cleaned and washed thoroughly and soaked for six to eight hours in the disinfectant.

VIVE LA FRANCE SETS HIGH MARK FOR PERSISTENCY

Vive La France 319616 sets a new record for persistency for all breeds by producing 15,271.8 pounds milk and 1,039.29 pounds fat in her fourth official year's test. In her four tests Vive has produced a total of 3,596.85 pounds fat, which exceeds the first four made by Tilly Alcartra by 577 pounds fat, and those made by Sophie 19th of Hood Farm by 843 pounds. With four yearly records averaging 900 pounds fat, Vive La France has outdistanced these two leading contenders for persistency honors by a wide margin. Her four records to date are: Milk 9,210.4 pounds, fat 633.29 pounds, at 2 years; milk 12,744.8 pounds, fat 892.63 pounds, at 3 years 2 months; milk 14,925.7 pounds, fat 1,031.64 pounds, at 4 years 7 months; milk 15,271.8 pounds, fat 1,039.29 pounds, at 5 years 11 months; totals, milk 52,152.7 pounds, fat 3,596.85 pounds.

It was on completing her second record that Vive La France first became a prominent character in the Jersey world, as her record of 892 pounds fat was a new high record for a junior three year old Jersey. Her next record won her two championships as the senior four year old breed champion and also as world's champion Jersey, which honor she held for almost a year. Vive's latest record comes within eight-tenths of a pound of regaining for her the Jersey world's championship, which is now held by

SICK ANIMALS

BOOK about Sick Horses, Cattle, Sheep, Dogs and Poultry, mailed free. Address Dr. Humphreys' Veterinary Medicines, 156 William St., New York.

Plain Mary 268206 with 1,040.08 pounds fat to her credit.

It was not until she had been on test for seven months that the possibility of making a world's record by Vive was considered. There is little doubt about her ability to beat this record had she been accorded, during the entire year, the treatment prospective record breakers receive, and had she not been exhibited at the Pacific International Exposition last November. She showed her class by winning the grand champion ribbon at the exposition, although this resulted in a considerable decrease in her fat production.

During the year 26 supervisions of Vive La France's test were made. Twenty-two supervisors, coming from four states, made these tests. In making new production records, Vive La France has not been neglecting her duty as a reproducer. She has carried a calf an average of 194 days during each of her four records and will have had five calves before reaching the age of seven years.

Pickard Brothers of Marion, Oregon, are the breeders and owners of Vive La France. She is a daughter of the gold medal bull, Golden Glow's Chief, the sire of 40 R. of M. daughters, whose ten best daughters average 738 pounds fat. Her dam is Sugar-in-the-Barrel, and although never officially tested, she was a very heavy producer. Including Vive La France, Sugar-in-the-Barrel has four daughters in the R. of M., two of them being full sisters to Vive.

Vive La France's last test is her first as a mature cow and what future records may be forthcoming time only will tell.

A MONSTER AUCTION SALE

One of California's greatest breeding farms will go under the auctioneer's hammer on October 19, when Rosamaines Rancho, owned by Stalder Bros., Riverside, will be sold to the highest bidder. On the same day, following the sale of the ranch, 50 registered Duroc-Jersey hogs, all of the registered Percheron mares and stallions, some high class work horses, a herd of grade dairy cattle, 2,000 White Leghorn hens, and all of the implements and equipment will be sold. On the two following days, October 20 and 21, the entire high class herd of registered Holsteins, numbering 150 head, will be dispersed. This is the largest farm auction sale ever made in the West, and there is already evidence that the sale will attract buyers from as far back as the Middle West. C. L. Hughes, sales manager of California Breeders Sales and Pedigree Co., will handle the sale, with Col. Ben A. Rhoades on the block.

Veterinary

Sow Has Enlarged Teat

I have a sow that has an enlarged teat. It is about six months since she had young pigs, so I don't think it could be milk fever, for it only started a month ago. It is the first teat behind the forelegs and is about the size of a goose egg and shows full of pus. There was a stake about nine inches high in her corral and I think she bruised herself on that.—Subscriber, El Monte.

The trouble has probably been caused by a bruise, as you suggest. Similar trouble is also found in the sow's udder when the sow is not dried up properly at the time she weans her litter. It should be lanced and washed out well with a good disinfectant. If you prefer not to lance it, it might be possible to paint it with iodine thoroughly, which would no doubt relieve the swelling. This can be done also before lancing. The lancing should be done so that the cut will come at the bottom of the swelling in order to let the wound drain well, which will cause it to heal more rapidly. The above treatment, if carried out, will no doubt relieve the condition.—G. E. G.

UNITED STATES CREAM SEPARATOR WITH PERFECTED DISC BOWL

Perfection—

Is it too much to expect?

A machine may be said to have reached perfection when, through mechanical and engineering excellence, it renders a degree of service in money- and labor-saving never before attained.

Years ago, the United States Cream Separator reached the peak of perfection as a money saver, by winning in open competition the world's record for close separation—a record that still stands.

The perfecting of the United States Disc Bowl is the last big achievement in cream separator building. With this notable refinement, the labor-saving features of the United States challenge and welcome all comparisons.

Those who know the ease of operation, the simplicity of cleaning, say the United States represents perfection in the most important detail of milk handling.

Write for literature today—but be sure to have the United States dealer near you show the machine itself.

When Writing to Advertisers Say You Saw Their Ads in the California Cultivator

MORE PORK IN LESS TIME

Duroc-Jersey hogs have a tendency to put on great amounts of pork at an early age. They are easy-feeding animals, and raise large families. These hogs were introduced less than 50 years ago, and yet in 1918, 51% of all the hogs marketed in the country were "Duroc-Jerseys." They are uniformly red in color. Increase your profits by raising Duroc-Jersey hogs.

Write for "DUROC-JERSEY HOGS ARE PROLIFIC AND PROFITABLE"—sent free to hog-raisers by the largest swine record association in the world. Over 12,000 members. The National Duroc-Jersey Record Association. Dept. 130 Peoria, Ill.

Diamond Bar Durocs

Double Your Dollars

ACE OF PATHFINDERS

This great boar headed the World's Grand Champion Duroc herd at the 1919 National Swine Show; also the first prize get of sire herd. All animals in both herds are owned by us.

He was Grand Champion at the Los Angeles Livestock Show and stood second to the world's grand champion at the National.

He is by Pathfinder, out of Hiawatha, by Crimson Prince, and, besides his show ring record, he is considered one of the greatest sires of the breed.

Buy These Breed Improvers

Now that we have decided not to hold a summer sale, we are ready to offer at private sale the greatest array of Duroc breeding and individuality ever put before California buyers. We have culled closer than ever this season, and every animal not fully up to the high Diamond Bar standard has been sent to the fattening pen. And those that remain—say, man, they are real ones!

SENSATION STRAIN BOARS AT SPECIAL PRICES

We have four or five January yearling boars of the Sensation strain ready for service which we are offering at especially attractive prices.

No matter whether you want a foundation herd, new blood for an established herd, or simply a boar to breed up a grade herd, we can satisfy you from the Coast's largest Duroc herd. While quality is high, our prices are reasonable, and every animal is sold under a guarantee of complete satisfaction. Call or write.

GEORGE W. BELL

A BUSINESS AUCTIONEER

When in need of high class auctioneering service I would be glad to have breeders and farmers correspond with me. I have had years of experience, know values and know pedigrees. I am selling for many of the leading breeders of California and am prepared to deliver the same results that have attracted this custom. Terms reasonable. Write, wire or phone.

GEO. W. BELL

Tulare, California

GOOD FEEDING AND CARE GET REWARD

Benefits resulting from good care and feeding of dairy stock are brought out clearly in the April reports of Minnesota cow testing associations.

There are 13 cows in each of two herds in a certain county association. One, the highest producing herd in that association, returned an average of 52.3 pounds of butterfat to the animal. The other, the lowest producing herd, returned an average of only 13.1 pounds of butter fat per cow, or 39.2 pounds less per cow than the average production of the leading herd.

"The high herd was fed silage and grain three times a day and hay twice. All feeding and milking were done in a thorough and regular manner. The rations consisted of liberal quantities of bran, corn, oats, oatmeal and cornmeal. Sixteen pounds of silage of poor quality and containing no corn was fed twice a day to each cow in the low herd. The hay, which was also of poor quality, was fed in a rack in the yard. One and one-half pounds of ground oats were fed. Regularity was not observed and the barn was not kept sanitary. The cows were turned out for the greater part of the day.

While the owner of the highest producing herd had the biggest feeding expense, his comfortable and contented cows returned him almost four times the butterfat produced by the low standing herd.

RECEIPTS FROM DAIRY TRIPLED

Keeping daily records of the milk yield of each cow where there is no cow testing association is a profitable practice. This is shown by reports on herd records received by the United States department of agriculture.

An instance where a herd has been greatly improved without increasing its numbers (by more than one cow) is found in a report from Oklahoma. The dairyman's cream checks for a given month amounted to \$78.42, the cream being obtained from a herd of 27 cows. One year later, after doing herd record work, he was able with a herd of 28 cows, just one more than he had at the earlier date, to sell cream to the value of \$223.60, or nearly three times as much—a pretty good return for care given to culling the herd and improving the management.

While the current prices for butter fat have increased somewhat, they have not trebled in a year, so it is obvious that there has been a large increase in the productiveness of the herd.

INSPECT SILO BEFORE FILLING

Before filling is started the silo should be examined for openings in the walls where air might enter and spoil the silage, and for rough places which might prevent proper settling of the corn. The hoops on stave silos should be tightened sufficiently to close all cracks, but they should not be tight enough to buckle the staves. The staves will absorb some moisture from the silage and the hoops should be released somewhat a few days after the silo has been filled to prevent the swelling staves from buckling or breaking the hoops. If the surface of the wall has become roughened a thin coating of rich cement will make them smooth. Metal silos may be prevented from corroding by an application of paint.

A careful inspection of the cutter, engine and corn binder previous to starting work will sometimes save unnecessary stops and repair bills. All machinery should be put in good running order, and enough teams and wagons provided to keep the cutter running steadily. Ten or 12 men idle at one time rapidly increase the cost of operation.

PRIZES FOR STALLION OWNERS

The Horse Association of America is going to divide \$100 in cash prizes among the three stallion owners who report to them the largest number of mares bred to a pure bred stallion this season.

The stallion owner who reports the largest number will receive a cash prize of \$50; the second largest report will win \$25, and the third largest report will win \$15.

The reports must be itemized, giving names and addresses of the owners of the mares and the name of the stallion. You can write these affidavits in your own way, so long as you give the facts and make affidavit thereto. Your local bank will attach suitable affidavit on request. Reports must be in by September 1, and cover this breeding season only—April 1 to the date of making report.

PROMPT CUTTING—MORE ALFALFA

Experiments conducted at the Nebraska agricultural experiment station indicate that alfalfa produces more if cut at the proper time. Tests were made for total yields per season when alfalfa was cut two, three, four and five times. It was found that three or four cuttings, depending on the season, gave the largest yield for that section of the state in which the station is located. "Forage Crops," Experiment Station Bulletin 169, says there are two indexes for proper cutting time. They are the appearance of the first bloom and the starting of a new growth at the crown and lower part of the old stems. Cutting should begin at the appearance of either index. Experiments also show that getting the hay into the stack or barn at the proper time means a saving of more leaves, which form 50 per cent of the value of the hay. In good drying weather a half day in the swath and a day in the windrow will ordinarily do. It is often better to stack a little green and let the hay brown cure than to have it rained on or lose too many leaves. Rain or dew is more likely to cause mold in the stack than the moisture in the plant.

GRAPEWILD FARM TO SHOW FINE CATTLE

Fourteen head of the famous Guernseys from Grapewild Farm at Escalon have been entered at the state fair. Former patrons will remember the fine specimens of this breed shown in former years by A. B. Humphrey, who states that this year's entries will be better than those of other years. Charley Moller, herdsman at Grapewild, has also prepared 29 head of hogs, the progeny of Grand Leader, grand champion at the Panama-Pacific Exposition. This lot contains entries in about all the swine classes for Berkshires and has a national reputation for class and type.

BIG DROP IN WOOL CONSUMPTION

A drop in wool consumption of nearly 17,000,000 pounds from the average for the six months of 1920 is seen in figures for June, 1920, just released by the bureau of markets. United States department of agriculture. According to the report, 46,000,000 pounds of wool, grease wool equivalent, entered into manufacture during that month, compared with 55,000,000 pounds for the corresponding month last year. Summaries for preceding months of 1920 have shown the following amounts used: January, 72,700,000 pounds; February, 63,700,000 pounds; March, 67,900,000 pounds; April, 66,900,000 pounds; May, 58,600,000 pounds.

The sharp decrease in wool consumption is a result of the curtailment of operations which began in the textile manufacturing industry in May and became more extensive in June. Many mills have been running on a short week schedule, while some have suspended operations entirely, the suspensions in many cases being for an indefinite period. Lack of orders, cancellations and deferred payments are given as primary causes for the unstable situation.

A committee of livestock people recently met in Chicago and discussed matters of livestock interest, but decided because of limited time that it was advisable to hold a more general meeting of livestock interests at some later time. "Therefore we recommend that the president of the American Farm Bureau Federation call a conference of the representatives of the various livestock organizations of the Middle West at Chicago in the near future to consider the vital questions now confronting the industry."

Livestock News Notes

LIVESTOCK SALE CALENDAR

Holsteins
August 26, W. M. Bray, Sacramento.
September 23, Allana Farms, Dixon.

Herefords
November 4, Pacific Coast Hereford Breeders' Association, Sacramento.
November 5, J. H. Cazler & Sons, Sacramento.
November 6, H. M. Barngrover, Sacramento.

Shorthorns
September 30, Wilotta Ranch, Suisun.

Poland Chinas
August 21, Merced County Poland China Breeders' Association, Merced.
September 27, Hugh C. Shinn, A. J. Elliott and Alex D. McCarty, Tulare.
October 6, Kings Co. Poland China Breeders Assoc., Hanford.

W. M. Carruthers, Live Oak, reports the sale of a carload of Shorthorn bulls to the Newhall Land and Cattle Company. Included in the lot were a number of sons of the two well known Carruthers bulls, Count Glory, grand champion at the 1916 and 1918 California state fair, and Hallwood Villager, first as a two year old in 1918. Carruthers says that the Newhall firm has been greatly impressed with the possibilities of pure bred Shorthorns on the range and has demonstrated very definitely that such bulls will add weight to their steers. Only recently the Newhall ranch shipped over 400 steers to the Seattle market that averaged over 1,200 pounds as twos.

John A. Bunting, secretary of the Pacific Coast Hereford Cattle Breeders Association, writes that the association will maintain a headquarters booth at the state fair for the convenience of the association members. Cattlemen will be furnished Hereford literature. Bunting also says that the winning Hereford steer will be sold at auction during the fair.

A. W. Morris and Sons Corporation, Woodland, reports the recent sale of the young bull, King Marco Mead Alcartra, to Corydale Farm, Belleville, Kansas. This youngster is a son of King Marco Alcartra, and therefore a grandson of Tilly Alcartra. His dam,

Aralia Mead Pontiac De Kol, is a seven-eighths sister to the \$11,000 bull, Sir Aaggie Mead De Kol, who has been quite extensively advertised as the richest bred long distance bull in the world. In fact, the six nearest semi-official tested dams of this young bull have records averaging 922.2 pounds from 22,562 pounds milk, the number including no less than three records made in two year old form with first calf. King Marco Mead Alcartra was junior champion at the International Livestock Show at San Francisco last fall, his sire winning grand championship at the same show. His grandsire has twice won the same honor at the California state fair, and his great grandsire has four times been grand grand champion at the California state fair, while his great granddam has also won grand championship at that show.

Geo. W. Thomas, Arlington, is the owner of a herd of 60 registered Jersey females. Thirty constitute the milking string, showing a composite herd test of better than five per cent fat. Nine cows are now on official test. None other than family help is employed on the ranch.

E. Avery Newton announces October 27 as the date for holding a public sale of pure bred Durocs, Hampshires and Poland Chinas at Arenal Ranch near Lankershim. At this ranch have been raised 100 March and April pigs, out of high class registered dams and got by leading sires of these breeds. Such a sale offering should blaze the way for a larger and keener interest in good hogs.

Members of the Glenn County Duroc-Jersey Breeders Association are making plans for a sale of bred sows and gilts to be held early next spring.

Mrs. E. A. Hardy, manager of the Anchorage Farm herd of Berkshires, has announced the purchase of a new boar, a littermate to the popular Eastern boar, Real Type. This new addition to the Anchorage Farm herd is said to be one of the largest boars of the breed owned in California.

Dr. E. J. Weldon, veteran Holstein breeder of Sacramento, has leased his entire herd to George Inderkum of Sacramento. Under the terms of the lease the cattle will be handled by the lessee for five years. Thirty head of females and one herd bull were included in the transaction.

Karl Fourness of Yolo County has purchased from Dr. E. J. Weldon of Sacramento a young Holstein bull sired by King Sadie Vale Elzevere and a daughter of Prince Gelsche Walker.

The University of California has just completed the first unit of a large modern steer feeding plant at the university farm, Davis. The plant has a capacity of 100 head of steers. It is the intention of the animal husbandry division to conduct cattle feeding trials on a rather extensive scale. To date very little work along that line has been carried on in this state, but changing conditions are developing a real need.

California livestock interests will be interested to learn that, owing to the increased volume of business, the California Breeders Sales and Pedigree Company of Sacramento has found it necessary to add the services of an experienced office manager and has been fortunate in securing A. D. Milligan for that work. Mr. Milligan has been editor of the Western Breeder, formerly The Rural Spirit, Portland, for the last seven years. Prior to that work Milligan was associated with Dean Carlyle of the Colorado college of agriculture and later with the Idaho agricultural college. Few men in the West have a wider experience or acquaintance with livestock activities and breeders than Milligan and it is expected that he will bring to this successful selling organization a fund of knowledge that will result in increased efficiency.

The success of the California Breeders Sales and Pedigree Company has been notable and has attracted the attention of the leading breeders

Grand Champion Hampshires

At our Llano Vista Ranch are found the leading families of the popular Hampshires: Gen. Tipton, Sioux Queen, Lookout Cherokee, and Director. Can supply foundation stuff in early spring pigs, sows with litters, bred sows, open gilts and young boars. Call at ranch any day or address

Sterilize Your Milking Machine

The **B-K** Way

Here Are the Reasons Why It Pays:

1. B-K is always ready. Just add water and use—no time lost—no fussing.
2. B-K is accurate—has the definite strength and other qualities which insure accuracy and avoid costly mistakes.
3. B-K is dependable—insures protection of your stock and product.
4. B-K is a powerful destroyer of disease germs—dissolves and annihilates them.
5. B-K has a dissolving action on casein and other milk solids—prevents adhesion to cups, tubes and utensils.
6. B-K makes no sediment—no accumulation on equipment—nothing to throw away—no waste. Saves rinsing and washing tubes and cups before use. Just shake them when taking from dilution, and use.
7. B-K is a powerful deodorant and leaves no odor of its own.
8. B-K costs very little to use. It is highly concentrated—the dilution for two single milker units costs only about 2c per day. The labor saved alone is many times that amount.
9. B-K prolongs life of rubber—keeps it free of grease—does not injure metal parts.
10. B-K contains no poison, acid or oil—is harmless to use anywhere without danger to people or animals—is fool proof.
11. B-K is a powerful weapon to protect your herd and men from infections and your milk and utensils from contamination, and it's all in one bottle—always ready. Keeps udders and teats smooth, soft and free of warts and sores—helps prevent garget, cow-pox, abortion, calf diseases—purifies and heals workmen's hands.
12. B-K saves labor, time and wages—increases net earnings.

B-K is sold in one gallon and five gallon jugs at hardware and implement dealers, milking machine agents and druggists everywhere. Order through us if no dealer in your town. We will supply you through the nearest distributor or from San Francisco stock.

Westover of the Oregon agricultural college is the first Guernsey field representative to be appointed by the American Guernsey Cattle Club, in accordance with the plans outlined at the annual meeting of the club last May. Professor Westover's territory will be in the Rocky Mountain and Pacific Coast states, but he will lay special emphasis on Guernsey development in the Pacific Northwest territory.

JANE GARDEN HOLSTEINS TO NEW HERD

In our issue of June 19 we reported the sale of a year old son of Sir Aaggie De Kol Acme from the Jane Garden Farm, Sacramento, to E. B. Connolly of Willows. Since that sale the same buyer has secured a number of top females from the Jane Garden Farm herd. The recent purchases include the following individuals: Heilo Pontiac, a junior three year old with a record of 28.18 pounds butter in seven days and a 30 day record of 110.2. Her seven day milk production of 727.6 pounds is the second highest in the state for her age; her full sister in blood, Bessie Parthenia Fern Pontiac, a 15 pound junior two year old; Walker Segis Inka, a 23 pound junior three year old, now in her seventh month on semi-official test and carrying the service of Sir Aaggie De Kol Acme; Molly Kuperus Alcartra, a half sister to Tilly Arcatra, with 686.6 pounds butter from 16,521 pounds milk to her credit as a three year old, and also in calf to Sir Aaggie De Kol Acme; Bertha De Kol of Linwood, with a seven day record of 24.18 pounds butter from 693.7 pounds milk. This last named cow is on semi-official test and on July 1 had produced over 8,800 pounds of milk in 104 days. She is also bred to Sir Aaggie De Kol Acme. In addition to the above cows Mr. Connolly selected Korndyke Rosamond, a 20.79 pound granddaughter of Pontiac Korndyke; the 23.4 pound Ruda Belle Korndyke; Ontario Betty De Kol, a 19.55 pound sister to the 33.08 pound Ontario Blonde Pietje, and her heifer calf; Sadie Betty De Kol, a two year old daughter of the above cow; Sadie Mutual Lass, with a seven day production of 15.25 pounds at 19 months and a heifer calf from Ontario Betty Pietje. Three of the last named cows carry the service of King Korndyke Pontiac, grandsire of the \$41,000 King Korndyke Pontiac Acme.

With such a foundation to build on and a determination to own one of the top herds of the West, the activities of Mr. Connolly and his manager, R. W. French, will be watched with interest.

BERKSHIRES SELL

By T. J. Hitte

Under the management of Bruce S. Bennett, field secretary of the Western Berkshire Congress, a successful public sale of 19 head of registered sows and gilts was made at the D. J. Bastanchury Ranch at La Habra, August 14. This sale was made by members of the Southwestern Berkshire Congress, of which Alex. M. Wilson, Guasti, is president, and C. J. Zinn, Inglewood, secretary.

The avowed object of this sale being to distribute first class foundation stock throughout this virgin territory for high class Berkshires, the result is looked upon as quite satisfactory to the promoters of the venture.

A general average of \$140 was made on the entire lot, with an even dozen names on the buying list, and 50 per cent of these beginners. The top price, \$500, was paid by Inglewood High School for the senior yearling sow Rival's Matchless Lady, consigned by Italian Vineyard Company, with the reservation that she be shown in the coming fair circuit by the con-

BUTTE CITY SALE LACKED LOCAL BUYERS

The third annual sale held at the Butte City Ranch, August 11, drew one of the largest crowds yet to attend this annual event. However, most of the visitors were visitors in fact and not buyers.

The sale was opened with the catalogued Berkshires. The offering was not extensive and was quickly absorbed, and considering the age of the pigs, mostly young stuff, the prices were fairly satisfactory. W. M. Carruthers of Live Oak was the heav-

Grant A. Brown, El Monte, writes: "Our young Jersey show bull, Financial Eugene, was sold through first appearance of 'ad' in your paper to A. C. Whiting, Ramona."

iest buyer, securing six head. Other buyers included Ernest Eibe, Glenn; W. W. Foster, Butte City; E. H. Grubb, Butte City; H. Matson, Butte City; C. E. Studebaker, Elk Creek, and O. B. Winn, Butte City. The top price was \$53.

A most excellent lot of Shropshires was offered and the demand for them was very encouraging. Mrs. W. M. Carruthers secured the top lot of yearling ewes at \$55 per head. The following buyers took the sheep: W. H. Morris, Hamilton City; W. W. Foster, Butte City; L. A. Nichols, Butte City; O. L. Raper, Glenn; J. C. Chadburne, Suisun; F. W. Sandercock, Sacramento; L. Kirch, Santa Rosa; Superior California Farm Lands Co., Willows; J. J. Shelloe, Glenn; Richard Powell, Live Oak; A. E. Slocum, Willows.

The disappointment of the sale was the lack of appreciation shown for the Shorthorn cattle. Owing to the shortage of feed the local buyers were not disposed to bid on the cattle, and the lack of this local support was such that the outside buyers soon secured their limits.

A most active demand developed for the Shetland ponies and the offering was taken at satisfactory prices. J. Francis O'Connor of Santa Rosa took the top pony, Lotta D., for the Sonoma County Fair Association, and also secured a mare and colt for the same buyers. Mrs. Carruthers; T. C. Sheppard, Gridley; W. C. Saxto, Glenn; James Day, Fall River; C. E. Green, Woodland, and Frank B. Anderson, Sacramento, were other pony buyers.

While the sale was hardly up to expectations it served to distribute a useful lot of livestock that will prove profitable investments to the purchasers.

The sale was under the management of the California Breeders Sales and Pedigree Company. Ben A. Rhoades of Los Angeles was the auctioneer and was assisted in the ring by Geo. W. Bell of Tulare.

Do you feed ten head of stock?

If you feed ten head of stock you are paying for a silo whether you build one or not. Authorities everywhere agree on this point.

"At the present price of hay," says E. L. Westover, Oregon Agricultural College Silo expert, "any silo will pay good interest on its investment to anyone who is feeding ten or more animals."

Indiana Silos Earn Their Way

The University of California Dairy Herd improved 10% in butterfat tests on silage rations. Oscar Holden, Turlock, Cal., writes, "I consider that any good silo will pay for itself every year. I expect to build another Indiana." Can you afford to go without a silo and still pay for one?

Twenty-two Years of Success

Indiana Silos have been manufactured for twenty-two years. Sixty-five thousand used. Straight-edge, clear No. 1 Fir staves. Airtight, tongue and groove joints, self draining. Door frame ready-built. Compression cam lock doors. Absolute guarantee. Three men can erect an Indiana in three days. Write for free silo book.

THE POULTRYMAN'S PROFIT

(Continued from Page 213.)

ness people count. A merchant whose wife stands behind the counter and whose son delivers parcels certainly counts their labor when he balances the year's accounts. Why should the poultryman be more willing to give away the labor of his family without adequate return?

The Price of Eggs

The cost of a dozen eggs fluctuates from month to month according to the proportion of the flock that is laying. Hens must eat whether they lay or not, and the more eggs they lay the less a dozen eggs costs. Last December a dozen eggs cost 69.41 cents and sold for 68.28 cents. This was about the time housewives all over the country began boycotting eggs and accusing poultrymen of being conscienceless profiteers. In November the case was worse for eggs cost \$1.18 and sold for 75 cents. From September to January the cost of a dozen eggs was greater than the price received. In January things took a turn for the better and the producer made three cents a dozen. In April it had increased to 13 cents. Now (June) the profit should be about the same, but in July it will drop, and by August it will not be over five cents a dozen. After that time there will be no profit at all, unless better prices prevail than prevailed last fall.

Mr. Brooks Explains

Because there has been considerable uneasiness among poultry people over the lower prices received for eggs the past winter and spring, I went down to the Poultry Producers in Los Angeles to ask Mr. Brooks, the secretary, what he thought about it.

"It is just a question of supply and demand," insisted Mr. Brooks. "There has been a marked increase in production all over California—20 per cent in the North, it is said, and nearly 25 per cent here in the South. This is due partly to the demand for increased food production from many sources and the patriotic response to it. The world is on the verge of starvation and we must produce something. Of course the unusually good prices received for eggs last year have something to do with this increase. There are more inexperienced poultrymen in the business than we have ever seen before.

"Naturally some producers have feared overproduction, but there is absolutely no such danger so long as we can find a market for the surplus. It is the business of the Poultry Producers to find a market for this increasing supply of eggs and so far we have had no trouble in finding it. In April and May there was such a brisk demand for eggs from New York that we did not begin to store till April. By that time Eastern hens, which had been held back from producing by the extremely cold winter, had begun to lay, demand fell off, and we have been storing nearly all that came in since April first.

"While it is true that eggs have gone into storage at a somewhat lower figure than last year, the published figures do not quite tell the truth, as far as members of the organization are concerned, for we were able to secure a little better prices a part of the time. When eggs were going into storage at six cents a dozen less than last year we were turning back two cents of the six to our producers. The first week in May last year eggs went into storage at 48.16 cents. This year for the same week they brought 43.66 cents, but our producers were actually receiving from the pool 45.02 cents. In March we paid as high as four cents above the market."

Outlook Must Be World Wide

The volume of business done this year by the Poultry Producers is shown by the following figures comparing the output with that of last year: April 22, 1919, there were received 79,000 dozen eggs; April 22, 1920, 128,000 dozen; April 29, 1919, 80,000 dozen; April 29, 1920, 124,000 dozen; May 6, 1919, 78,000 dozen; May 6, 1920, 125,000 dozen.

If we were forced to find a market for all these eggs at home we might be uneasy about the outcome, but the whole world is calling for food. We have only to make it plain that the food value of a five cent egg is greater than that of five cents worth of meat

or cereal, and California eggs will find their way to every corner of the globe. Other foods have been advertised. The poultryman alone has stood back and let the public take or leave his product as it pleased. A big advertising campaign is in contemplation which shall let the public know what eggs are worth. The Middle West is falling behind, it is said, in egg production. Now is the time for the California poultryman to boost his product by getting into the band wagon with all the rest of the producers. United we stand—for better markets, better prices, greater consumption.

Wanted—Better Hens

The figures quoted from Mr. Cornell's chart make it quite plain that what the poultry industry needs is not fewer people in it, but better hens and more careful management. The net gain per hen in 1918 was 78.66 cents. To make a living at this rate a man would need to keep at least 2,000 hens. In 1919, that exceptionally good year, the net gain because of higher prices reached \$1.07, the "dollar a hen" basis that we figured on ten years ago. This year, judging from the figures for the first four months, it will be around 81 cents. On the ten demonstration farms in Los Angeles County the "labor income per hen," which is apparently the same as the "net gain per hen" on the chart, was \$2.45 in 1919. What makes the difference? Isn't it just the difference between the 120 eggs per hen assumed on the chart as the average yield and the 148 eggs actually laid by the hens on the demonstration farms? Twenty-eight eggs at the average price of 54 cents a dozen would add \$1.26 to the \$1.07 of the chart. Isn't it time those ten dozen egg hens went to market and let the 12 dozen egg hens take their places? Better breeding will do it. Closer culling will do it. If the thing is hard it is all the more worth while. Let us not be defeated by a little matter of two dozen eggs.

Poultry Queries

Conducted by J. A. Koethen

California Trapnest

Could you describe or give me a diagram of a trapnest for my laying hens? I have 60 R. I. Red pullets and want to find my best layers.—Subscriber, Shively.

The California trapnest, of which description and diagrams may be had by writing Agricultural Experiment Station, University of California, Berkeley, for Circular 142, is quite generally used by poultrymen in this part of the state, and its simplicity commends it to all. It consists of a simple box nest with a trapdoor in front which is hinged at the top. To set the nest the door is swung inward and held at the bottom by a wire hook at just the right height so that when a hen enters and walks under the door her back will raise the door and release the hook, thus allowing the door to swing quietly shut behind her. As the door swings shut against the outside door stop (a three-inch straight screw hook) the inside door stop (a bent piece of No. 6 wire) drops down and locks it from the inside. Working plans for this nest are given in Circular 142, which costs only a postal card.

A Laying Mash

Please give formula for good laying mash, also advise amount to feed per day to 30 pullets. We feed a 90 pound sack of scratch in a month, and our only mash is bran moistened with Lactin. We also feed our own table scraps and those from the tables of

Coulson & Co.
PETALUMA, CAL.

three neighbors. Is alfalfa meal good and is it green feed?—Mrs. S., Madera.

A good homo mixed mash consists of 4 parts bran (by measure), 2 parts middlings, ground barley or oats, 1 part alfalfa meal and 1 part beef scrap. For Leghorns, except in the hottest weather, add 1 part corn meal (feed meal). Instead of 1 part beef scrap, you might substitute ½ part beef scrap and ½ part soy bean meal. I like alfalfa meal because it adds bulk and contains considerable protein. While it is not green feed I believe it helps to take its place when greens are scarce. The ground barley may be omitted if desired. Ground oats are so difficult to obtain now, except the oat chop, which is mostly hull, that it is hardly worth while recommending them.

No one can say just how much a hen should be allowed per day, but most hens eat around 90 pounds in a year, which should be half mash and half scratch. The laying mash should be kept in hoppers where it is always accessible, and the scratch is fed at night. One of the best feeders I have met says he feeds ¾ of his scratch an hour before sunset and the other ¼ just before the hens get onto the roosts, and feeds enough so that there will be a little left over for early morning. Some nights the hens will eat more and some less, according to the amount of table scraps they have had during the day.

NATIONAL EGG LAYING CONTEST

By T. W. Noland

The 300 contest hens, poultry experiment station, Mountain Grove, Missouri, laid 5,036 eggs during July, or an average of 16.78 eggs per bird. Pen S. C. White Leghorns owned by Willanna Farm, Elizabeth, N. J., won the cup for July by laying 119 eggs during the month.

Ten Leading Pens for July

S. C. White Leghorns, New Jersey, 119 eggs; S. C. White Leghorns, Missouri, 111; White Rocks, Idaho, 111; R. C. Brown Leghorns, Kansas, 110; R. I. Whites, Missouri, 110; Anconas, Missouri, 108; S. C. Reds, Missouri, 108; Anconas, Missouri, 104; S. C. White Leghorns, Illinois, 104; S. C. White Leghorns, Missouri, 103; S. C. White Leghorns, Missouri, 103.

Ten Leading Pens to Date

STORRS EGG LAYING CONTEST

Storrs, Connecticut, August 2, 1920. Report for week ending July 30, 1920:

A comparison of egg yields during the first nine months of the current contest at Storrs, with the production for the corresponding period last year, clearly demonstrates the value of good poultry management. A year ago the supervisor of the contest was under the necessity of engaging a new man on the average of every three weeks. The experienced poultryman understands full well that this is not time enough for a man to even get acquainted with the hens he is taking care of. Such rapid fire changes militate against good egg production. During the laying contest last year there were actually employed five superintendents and 17 different men worked under them. There was no way to avoid engaging so many men; nevertheless, this was poor poultry management. The net result was double the usual mortality among the

hens, a loss of nearly 15,000 eggs during the year and a lot of ill will from breeders who participated in the contest. In the current competition these adverse factors have been largely eliminated. At the end of the first nine months the mortality among the hens has been below the average, the egg production is above the five year average and 14,000 eggs ahead of last year. The contestants are all pleased with the prospects of a banner year.

In the thirty-ninth week the light and heavy breeds divided the honors equally. Oneck Farm's pen of Barred Rocks from Westhampton Beach, L. I., nosed into first place with a score of 54 eggs. Hollywood Farm's pen of Leghorns from Hollywood, Washington, was a close second with a yield of 53 eggs.

The three leading pens in each of the principal varieties are as follows: Plymouth Rocks

Jules F. Francais (Barred), 1,663; Oneck Farm (Barred), 1,639; Merritt M. Clark (Barred), 1,512.

White Wlandottes

Mrs. R. W. Stevens. 1,408; Patrick

F. Sullivan, 1,371; Harry D. Emmons, 1,357.

Rhode Island Reds

Pinecrest Orchards, 1,656; Deer Brook Poultry Farm, 1,475; Jacob E. Jansen, 1,448.

White Leghorns

E. A. Ballard, 1,592; Richard Allen, 1,558; George Phillips, 1,528.

Miscellaneous

A. E. Hampton (Black Leghorns), 1,541; A. L. Anderson (R. I. Whites), 1,483; H. P. Cloyes (Buff Wyandottes), 1,364.

JOHNSON GRASS KILLS GEESE

It was reported to Farm Adviser Amundsen of Placer County that several geese had died suddenly. Upon investigation of the food used the farm adviser stated that Johnson grass was probably the cause as it contains Prussic acid. It was suggested that an experiment be tried, feeding geese small and large quantities, and it was

found that if penned in a patch of Johnson grass young goslings were easily affected and soon died.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST, SANTA CRUZ

By Max Kortum

R. C. Gibson of Newhall stepped into second place during the week.

The four highest pens stand as follows: Walls, 1,671 eggs; Gibson, 1,621; Enterprise, 1,615; B. F. Rose, Santa Cruz, 1,615.

High pens for the past week were as follows: Neef, 46 eggs; Barker, 46; Gibson, 45; Bellows, 44; Schlink, 40; Rose, 38; Gibson, 37; Clark, 37; Stalling, 36.

The management of the Southern California Fair announce that they have succeeded in securing E. I. Hammond as superintendent of the poultry department for the coming fair.

Farm Machinery for your every need

ALLIS-CHALMERS 18-30

A four plow tractor especially suited to California conditions.

ALLIS-CHALMERS 6-12

A one man tractor which will accomplish the work of 3 men and 3 teams.

McKAY PLOW AND SUB-SOILER

An efficient power lift disc plow and sub-soiler making possible plowing and sub-soiling in one operation.

THE BEEMAN TRACTOR

In plowing or cultivating, does the work of one horse.

THE success of the farmer—like the success of every business man—depends upon his buying the right tools, the right materials, etc. for his own work.

We consider it a part of our service to go into the markets of the world and to secure the very best equipment available for the modern farmer working under California conditions.

Tractors

In the two models of ALLIS-CHALMERS TRACTORS—the 6-12 and the 18-30, and in the BEEMAN TRACTOR—you can buy just the tractor that will exactly fit the work to be done.

Plows

Not only do we handle the usual line of plows, cultivators, etc. but in addition carry such implements as the McKAY, combined power lift disc plow and sub-soiler, etc.

Sprayers

Spraying equipment is necessary to every orchardist. To supply you with the best available—we carry the HARDIE. Make known your requirements.

Implements

No matter what your needs in farm implements and equipment—make them known to us and we'll take care of you. Our experts will gladly advise with you—and refer you to your local dealer handling these lines where possible.

You'll see us at the STATE FAIR—but in the meantime write us about your requirements.

DAHLIA CLUB

Los Angeles has an organization of enthusiastic lovers of the dahlia. They have been organized for many moons, but only recently have issued a club organ, or bulletin. It is known as the "Bulletin of the Dahlia Club of Los Angeles."

The aims of the club are "To unite all parties who feel an interest in dahlia culture, to arrange exhibits and work together in a spirit of helpfulness and cooperation that homes may be made more attractive and beautiful and the glory of our city magnified."

The club is already planning for a dahlia exhibit to be given at the Alexandria Hotel, Los Angeles, September 23 and 24. The premium list contains three separate classes, or a total of over 40 opportunities for winning premiums. The secretary is Elmer C. Webber, Los Angeles.

COTTON SEED HEARING POSTPONED

Director of Agriculture Hecke has been called East to investigate the serious situation affecting the disposal of California pears, and because of his absence from this state has postponed the hearing on cotton seed quarantine which had been called for August 20. Announcement later as to postponed date.

Glenn County farm bureau meetings. Capay, Wednesday, August 18; Grapevine, 25 at 8:15 p. m.; Larkin, 27. The board of directors meets at Willows August 28 at 1:30 p. m. No regular meetings during August in Ord, Jacinto, Willows, Plaza and Elk Creek centers.

RHUBARB---Wagner's Giant Plant Now August is a Good Month to Plant

Growers who planted last July and August have already harvested over 15 tons per acre netting \$1000 eleven months from planting. For further information, write J. B. Wagner, Rhubarb Specialist, 1550 East Villa St., Pasadena, Cal.

NEW RICES MAKE GOOD RECORD

Very favorable reports have been received by the United States department of agriculture from the South regarding the condition of the extensive plantings made this spring of Acadia and Fortuna rice, new varieties developed by the department at the Crowley rice station in Louisiana, in cooperation with the Louisiana agricultural experiment station. These two rices are among the best selected from a study of more than 2,000 different kinds at the Crowley station. Their importance is demonstrated in part by the large yields obtained. Last year under field conditions an average yield of 5,155 pounds of rough rice was obtained from the Acadia on 48 acres and an average of 2,775 pounds of rough rice from the Fortuna on 35 acres of very old land. Both of these records are excellent and give an indication of the large production which may be expected this year on a much larger acreage, if weather conditions continue favorable. Eventually it is the purpose of the department to make these new varieties of seed available to all growers through the markets.

Arrangements have been completed for the big meeting of the California Cattlemen's Association on Cattlemen's Day at the state fair, Sacramento, September 8. With stock growers present from all parts of the state the association expects excellent results from this meeting. A tentative program includes short talks by Governor Wm. D. Stephens, M. D. Lack, G. H. Hecke, Peter J. Shields, Prof. C. W. McCampbell, District Forester Redington, R. L. P. Bigelow, F. H. Bixby, Dr. J. P. Iverson, R. N. Wilson and Dean H. E. Van Norman.

Household Department

THE CONQUEROR

It's easy to laugh when the skies are blue
And the sun is shining bright;
Yes, easy to laugh when your friends are true
And there's happiness in sight;
But when hope has fled and the skies are gray,
And the friends of the past have turned away,
Ah, then, indeed, it's a hero's feat
To conjure a smile in the face of defeat.

It's easy to laugh when the storm is o'er
And your ship is safe in port;
Yes, easy to laugh when you're on the shore,
Secure from the tempest's sport;
But when wild waves wash o'er the storm-swept deck
And your gallant ship is a battered wreck,
Ah, that is the time when it's well worth while
To look in the face of defeat with a smile.

It's easy to laugh when the battle's fought
And you know that the victory's won;
Yes, easy to laugh when the prize you sought
Is yours when the race is run;
But here's to the man who can laugh when the blast
Of adversity blows; he will conquer at last,
For the hardest man in the world to beat
Is the man who can laugh in the face of defeat.

—Emil Carl Aurin in National Magazine.

MISS PHOEBE'S HOLLYHOCK GARDEN

SPRING is surely here!" the women in their windows would exclaim as they watched Miss Phoebe Malcombe with her basket of pussywillows pass by their houses up the hill to the Longfellow High School. Or, "Autumn has come again, for there goes Miss Phoebe with her milkweed pods and asters!" They could say this because for 20 years Miss Phoebe had been going past their windows with her seasonable basket.

Twenty years, up on the third floor of the Longfellow, Miss Phoebe had taught the drawing classes. Her hair was quite gray now and her eyes, which were two of the kindest eyes in the world, looked often tired and there were patient lines about her mouth. But there were people who could remember Miss Phoebe when her hair had been a snappy black and her cheeks as pink and fresh as the hollyhocks in her own garden.

That was the time when Miss Phoebe had been but 21 and just home from art school. It was said that Miss Phoebe had won a gold medal and that an editor down in New York, who had seen her pictures, had offered her a place on his magazine.

"I reckon," old Jim Wilson, the postmaster, had said to Miss Phoebe one morning when he had handed her an important looking letter with a New York postmark; "I reckon now with this fine position you're going to be getting and the money you'll be making, you'll never let your ma take in any more sewing. You'll be able to give her a rest now, Miss Phoebe, such as she ain't seen since your father died and you was a baby."

And then when all Lakeview had given Miss Phoebe a farewell party on the very eve of her going, something happened, something so unforeseen, so piteously overwhelming as to postpone Miss Phoebe's New York adventure for 20 years and to change the course of her life. Mrs. Malcombe suffered a stroke of paralysis that for weeks threatened her life and finally left her helplessly crippled.

At first Miss Phoebe had hopes for her mother's recovery. She bravely accepted the modest art position in the village high school, engaged a girl to stay with her mother the hours she was obliged to be absent, and waited cheerfully and patiently. One of the sweet things about Miss Phoebe was her cheery patience. It perhaps was what had given her face its soft and lovely quality.

Years passed. Old Mrs. Malcombe sat in her chair quite comfortable but helpless, slowly fading away like the fading of a flower. If there had ever been a time when Miss Phoebe had resented the fate that kept her from realizing her career she had carefully concealed it from her mother. A great love existed between them. "I'll never leave you, Mother," Miss Phoebe had often whispered to her. "No, not for all the glories of the world."

Two years after Mrs. Malcombe's

death, the daughter went steadily on with her teaching. She had become a fixture with the school, as much so as the flagstaff on top of the building or the clock in the lower hall. Then one day the village was electrified with the news that Miss Phoebe had resigned and was going to New York to have a studio. "To have a studio!" repeated the amazed Lakeview. "But was Miss Phoebe, the village drawing teacher, clever enough to draw pictures for magazines and actually sell them?" Then Lakeview experienced an awakening, for Miss Phoebe, for the second time, had proved that she was. She had, the past year, on the margin of her time, made and sold several pictures. Their excellence was attested by the fact that again had come to her an offer to come to New York.

The day before her departure she sat beside a box packing her pictures. Suddenly, she came to one over which she lingered and fondled almost as if it had been a baby. It was the picture of a little yellow haired boy with brown, bare feet standing against a great mass of pink and scarlet hollyhocks. It was entitled, "In a Garden."

"The Dear!" whispered Miss Phoebe and her lips twitched a little. "How I shall miss him!" The boy who had posed for the picture was David, a little elf of a fellow who played in her garden and made trains of cars out of her books on the floor of her studio. She covered the picture at last and carefully placing it in the box, was preparing to tack down the cover when the door bell rang. "A telegram," gasped Miss Phoebe, "or callers." But it was not callers—just the boy with the Post. She found her pocketbook and paid him.

"Don't bring it next week, Willie. I'm going away to New York."

"You're alright, Miss Phoebe, I say!" grinned Willie, keeping the change as she closed his fingers over it. "And some day I bet Lakeview will find one of your pictures on the Post's cover."

The picture on the Post's cover of a little boy against a background of hollyhocks was so nearly like her own conception that she could scarcely believe her eyes. With beating heart she read the signature, Marcia Allen McNair. "Her picture!" gasped Miss Phoebe, "Hers!" She's got the start on me again, even to being first with my idea.

She had spoken the words aloud. Laddie, a very old Scotch Collie, got up slowly from his nap and came up and laid his great head understandingly on her lap.

"It hurts, Laddie, that I never could have had my chance. Marcia and I were to have gone away together, Laddie, but something happened to make me stay. She went on to a big success. And I've often wondered if something had kept her from going and I could have gone on, wouldn't I have made as big a success? I love to think so, Laddie! And Laddie, that isn't her real name any more than mine is Narcissus Celeste. Her name is just plain Mary McNair and she's from Lockport, Illinois, and we went to the Art Institute together, roomed together 20 years ago. But that isn't all, Laddie. There was in school a teacher, old Vandy, we used to call him. He taught the life class. He used to watch her pictures and mine in the making and once he said, 'Miss Mary, she has talent—much, but Miss Phoebe has more; she has genius.' That's the word, Laddie, the magic word, and I've liked to think all these years that perhaps he knew. It makes it easier to have the courage to start again!"

She picked up the picture again and examined it with greater interest. She even held it up before the old dog's eyes. "Look, Laddie, isn't it clever?" Mary was always so clever and pretty too! They say now that she is cold and haughty. That she has a great house with servants and cars, and has traveled in foreign lands and met great people and received honors. I've seen her last photograph; she looked rather old, I thought, and tired, but she wore a wonderful velvet gown and there were real pearls around her neck, Laddie, the gift of a king, it is said!

A shrill, thin little voice broke suddenly upon them. It was David. He

U. S. Army Tents

Of regulation 12½-ounce army duck, double weave and double fill. They are mostly tents which were repaired for issue to troops, but account of the sudden ending of the war were not reissued. The Government repairs only tents that require slight mending and which are still good for regular wear. These are practically as good as new.

No. 625A army tents, 16 ft. by 16 ft., complete with hood, pole, pegs, lines and slides, all in splendid condition and fully guaranteed \$37.50

No. 725B army tents, 16 ft. by 16 ft., complete with hood, pole, pegs, lines and slides, fully repaired, completely guaranteed \$35.75

Army officers' tents, 9 ft. wide, 9 ft. 2 in. long, 8 ft. 6 in. high, with 3 ft. 6 in. wall. Complete. \$29.00

Above prices are f.o.b. Los Angeles.

U. S. Army Paulins, Auto Truck and Wagon Covers \$14.75

Brand new, full size 11 ft. 6 in. by 14 ft. 8 in.—of standard U. S. Army khaki-color heavyweight duck, double weave, double fill—the kind of material that will stand damp, moist climates. It will wear for years. Its khaki color protects it from mildew.

Each cover is completely equipped according to U. S. Army specifications with the necessary ropes both at the ends and sides.

These covers make excellent auto coverings, are ideal for impromptu auto tents, great for campers, for farmers—for hay, grain or machinery protection—as merchandise covers for truck and other commercial hauling concerns, and for cement and other contractors. Two of them fastened together will make a paulin that would cost you at least \$55.00 today.

While they last you can buy them at \$14.75, postpaid to your town.

U. S. Army Civilian Pants

\$6.45

Sent Postpaid

Brand new wool trousers, U. S. regulation 20-oz. wool worsted, olive drab. They were ordered by the U. S. Government for certain branches of the service and are tailored according to U. S. critical standards, but in civilian style. Sizes 32 to 42 waist.

Olive Drab Wool Army Blankets \$7.75 Postage Prepaid

Blue Grey Wool Army Blankets \$6.65 Postage Prepaid

The U. S. Army stamp assures the quality. You are lucky to be able to get them.

Be sure to state whether you want the olive drab at \$7.75 or the blue grey at \$6.65. They are both U. S. Army stock. Same size, wonderful bargains at these prices.

Send 15 cents in silver or stamps for our UP TO DATE FALL AND WINTER 1920-1921 CATALOGUE, containing over 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE AND COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (illustrating 30 of the various simple stitches), all valuable to the home dressmaker.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

How to Order Patterns

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very best NEW YORK styles, all patterns ordered are filled in NEW YORK. Therefore, we promise to deliver all patterns ordered within TWO WEEKS: we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
California Cultivator
Los Angeles

carried a small paper box and deposited it upon Miss Phoebe's lap with an air of grave importance.

"It's some wild animals I've been taming for you!" he announced, his eyes as bright as a young robin's. "And it's for to remember each other by, Miss Phoebe!"

"Wild animals!" laughed Miss Phoebe, giving him a little hug. "It couldn't be elephants, David, or lions—or—"

"Nope." He threw back the lid. "It's caterpillars! This one," he

pointed to the fatter of his black and yellow, fuzzy specimens, "is King Al-Yellow-Top in honor of King Albert of the Belgians, you know! And him's George Washington, U. S. A. We're to keep 'em, and by and by when they turn into pretty butterflies we'll remember each other. It ain't tomorrow you're going, Miss Phoebe?" His tones were wistful. "Not tomorrow?"

"No, Love," whispered the woman, kissing an adorable curl at the nape of his pink neck, "not tomorrow but the next day. Tomorrow, you and Laddie and I are to have our farewell party in the garden and then Mr. Preston is coming to take Laddie away with him out to his farm."

"Does Laddie like Mr. Preston, Miss Phoebe?"

"He doesn't know him yet, dear, but he will in time. Mr. Preston is a good, kind man and he has two little girls to play with Laddie."

"I'll bet he'll be lonesome and run back to us!"

"Oh, David, don't. You know I cannot take him to New York."

"Why can't you?"

"Because he would not be happy. There is no garden for him to run and play in."

"Ain't there no flowers or trees or birds there?"

"No; only in parks."

"Does God stay in the park, Miss Phoebe?"

"Oh, David, run away and play; I must finish my work now. God is everywhere, darling."

"But you said, Miss Phoebe, He was most where there was flowers and birds and a garden. You said—"

The door bell again was ringing. It was Mr. Preston. He had happened to come to town a day earlier than he expected and would take Laddie home with him, Miss Phoebe and David had not counted on this.

"You won't let him take him, Miss Phoebe?" protested David passionately, "cause he's invited to our party!"

"But, dearie, we cannot ask Mr. Preston to drive 30 miles back just to leave Laddie over night. Come, Laddie."

(Continued next week.)

THIS WEEK'S PATTERNS

Clothes for the school girl of all ages are shown this week. 3342 shows sports dress with all sorts of class; 3328 shows possibilities of a little quick embroidery in plain color cuffs, pockets, collar and fronts. The two pleats in front of skirt carry same effect up into the waist by the overlapping embroidered straps or tabs. The little dress pictured is of gay plaid gingham.

A most becoming suit is shown in 3318-3315, suitable for sport silk, jersey or heavier wool. The sketch at upper right shows attractive closed front. Strips of Angora in plain or novelty weave are still very popular as trimming for either silk or jersey in this style. No woman who has had a jersey or soft-wool suit of this practical style will ever be content without one. They are of the always ready, uncrushable type, equally good for picnic or church going and may with care be made satisfactorily at home.

The new fall hats are very much in evidence; many of the turban and small toque style, covered with duvelyn or similar material in gay colors with little or no trimming. Such a hat, carrying same color used in trimming the suit described above or a color in striking contrast, will very satisfactorily complete a costume. Don't forget the value of a good hat. We were all brought up on the "neat glove, neat footwear of the real lady" idea, but some real ladies do wear dowdy hats with neat gloves and footwear and good dresses, thereby utterly spoiling the effect. And it really is a duty to present to the world we meet as pleasing a picture as possible. That doesn't mean extravagance by a good deal—merely suit-

ableness. Sometimes when we look at the roses of the gardens and the sunflowers of the fence corners, we rebel at the time and the washing and ironing and sewing and mending and polishing demanded if we would be properly "clothed upon"—but what's the use? That seems to be one of our many jobs.—R. P. D.

MORE SWEET PICKLES

Mixed Sweet Pickle

In answer to Mrs. J. W. M. of Fresno in request for sweet pickle recipe I send following:

Put equal quantities of cauliflower, onions and little cucumbers in brine for a week, each vegetable separate in brine by itself. Drain off brine and put vegetables in layers in a kettle. Make syrup of 1 quart vinegar, 2 pounds brown sugar, $\frac{1}{4}$ teaspoon black pepper, 1 large onion, cut fine, 1 small pepper. Pour this syrup over the vegetables, bring to a boil and fill jars with them, putting into each jar a small piece of red pepper, a piece of green pepper, 2 bits of lemon, 2 teaspoons celery seed, 1 teaspoon coriander seed and $\frac{1}{2}$ teaspoon mustard seed. Seal cans at once.—Mrs. John E. Wilbur, Pasadena.

Corn Relish

18 ears corn, 1 head cabbage, 4 onions, 2 large green peppers, $\frac{1}{2}$ gallon vinegar, $1\frac{1}{2}$ cups sugar, 2 ounces mustard, $\frac{1}{4}$ cup salt. Cut corn off cob, chop cabbage and peppers. Put all together and boil until tender. Seal in glass jars.—Mrs. Mitchell.

Pickled Apricots

It is late in the year for this apricot pickle recipe, but I send this one, which is a variation and we think an improvement on the old fashioned peach pickles.

4 pounds apricots (prick them with a fork), 1 pound, 3 ounces sugar, $\frac{1}{2}$ pint vinegar, 12 whole cloves, a little stick cinnamon and $\frac{1}{4}$ teaspoon (scant) cayenne pepper. Let syrup boil up once, then cook apricots five minutes.—Mrs. Jas. M. Mitchell, Torrance.

CANNING STRING BEANS

Plenty of string beans in jars in the store closet means that the basis for innumerable salads and vegetable side dishes is at the housekeeper's command all during the winter months, so when this vegetable is at its best in the garden or on the market the wise woman cans enough for use when it is out of season. The following directions for canning string beans are given by the United States department of agriculture:

Select small, tender wax or green beans for canning purposes. Beans which have grown within the pod to any size are difficult to can, and the resulting product is not so satisfactory as one from younger beans. The sooner the beans are in the jar after picking the better the flavor and the more certain they are to keep. Wash, string and cut off the ends of the beans. Whole beans may be canned or they may be cut in short lengths. Those cut diagonally are attractive in appearance.

Fill Jars with Hot Brine

Place the beans in a wire sieve or in cheesecloth and blanch (scald) in hot water or live steam for from three to five minutes, or until the pod will bend without breaking. On removal, drain well and pack into hot jars which have been boiled for 15 minutes. On the jars place rubbers which have been boiled in a solution of one tablespoon of soda to one quart of water.

Cover beans with a hot brine made from four level tablespoons of salt to four quarts of boiling water. Put on top which has been boiled 15 minutes. With glass top jars put one wire bail in position. Make screw tops about half tight. Processing beans under steam pressure is recommended. Quart jars should be processed 45 minutes under pressure of ten pounds. With a hot water canner or with a home made canner made out of a wash boiler or lard can, process the jars three hours if the one period procedure is used. Make sure the water is boiling before starting to count time. When boiled, tighten the covers and cool.

If the intermittent boiling procedure

is used, boil for one hour on three successive days. Before each boiling loosen the covers. Tighten covers after each boiling. When the processing is finished, lift the jars from the canner. Cool in a spot free from drafts, test and store. In event of leakage when jar is tested, remove rubber, put on new wet boiled one and process 15 minutes more.

Vinegar Aids in Preventing Spoilage

During the past year the home economics experimental kitchen of the United States department of agriculture has been experimenting with the addition of a small amount of acid—vinegar—to nonacid vegetables being canned. This work is being continued and the results thus far indicate that one to four tablespoons of vinegar added to a quart jar helps greatly in reducing the amount of spoilage. When the vinegar is added the time of processing can be reduced. For instance, it is found that corn, which ordinarily is difficult to can successfully, keeps well when four tablespoons of vinegar are added to a quart jar processed three hours continuously. String beans, old peas and spinach are other vegetables successfully canned by this method.

The addition of vinegar to canned vegetables in the amounts mentioned modifies to some degree the natural flavor of the vegetable, but the result is not objectionable to most people and in many instances is not noticed.

HOUSEHOLD QUERIES

Pickled Walnuts

Please tell me how to make walnut pickle.—Subscriber, Santa Ana.

Nuts should be gathered when they are tender enough to be pierced with needle. Make strong brine, 4 pounds salt to gallon water. Prick skins of walnuts and put in brine for nine days, but change brine every third day. After nine days drain off brine and place in sunshine, moving occasionally, until they are evenly black. This will take two or three days. Pack jars three-fourths full of nuts and pour over them boiling syrup made in proportion of $\frac{1}{2}$ cup brown sugar, 2 ounces cloves, 1 ounce black pepper, 1 ounce allspice, 1 ounce bruised ginger, 1 stick cinnamon. Boil spices (in cloth) in vinegar ten minutes and pour over nuts. In a day or so take off syrup, reboil and pour over nuts. Repeat a second time. Then seal or cover closely and put away in cool, dry place. They should stand about a month before using.

Fig Jam With Walnuts

Can someone give recipe for fig jam with walnuts? I find so many good recipes in your paper.—Subscriber, Yorba Linda

Canning Chilis—Sour Pickles

Please find out how I can put up green long chili in glass jars to keep just like they can them in the stores, and how to make sour pickles, not dill, but the regular sour pickles, and please put in next Saturday's paper.—Subscriber, Lankershim.

The chilis may be peeled in the same way as pimentos, as given on this page last week, roasting few minutes in hot oven or dipping in hot cottonseed oil. Some of the fiery tough skinned Mexican peppers will not loosen their skins with this treatment and it is necessary to dip from two to three minutes in boiling lye, 3 ounces to 1 gallon water. Chill at once in cold water and slip off skins. This makes peppers soft and pliable so they can be packed into sterilized jars after cutting off stems and removing seed cores. It is not necessary to peel for home use. Peppers need only be stemmed and cored and heated in boiling water for few minutes to soften them so they will pack satisfactorily. After packing in jars, fill with boiling water, put on tops loosely, place in "wash boiler canner" and boil hard for 40 minutes. Remove from boiler and tighten caps. Olive or salad oil may be used instead of water in filling cans.

Recipe for sour pickles with mustard was given on this page last week. Here is another: Place small fresh cucumbers in brine made of 2 pounds salt to gallon water. Keep submerged with wooden float for about 4 weeks. They will ferment and scum will form. If they become soft add more salt. Pour off brine, simmer in fresh water 20 minutes, pour off, bring to simmer

again in fresh water and let stand in this for 2 hours to soak out excess salt. If soft add 1 tablespoon alum to gallon water. Rinse in cold water, drain. Cover with strong cider vinegar. If they soften or mold at any time place in fresh vinegar. Pack in wide mouthed corked bottles or jars with glass tops.

This letter was received on Wednesday when "next Saturday's paper" was already off the press. The processes of type-setting, printing and mailing take some time, so that we again call attention to the fact that all material for the household page has been prepared and has left the editor's desk by Saturday morning early the week before date of issue. Had our inquirer sent name instead of initials we would have mailed these recipes direct, for we know that canning time and pickling time are growing short. Please always send name and address with any communication. We never print if requested not to, but may sometimes be able to give quicker service by mail in case of urgency.

Cherry Olives

In accordance with request in Household Queries of August 7 I send recipe for cherry olives:

Take large, firm cherries, wash them without stemming, pack into Mason jars, half fill with water and fill the jars with a good vinegar; add 1 teaspoon salt to each pint jar of cherries. Seal. These are fine in winter, served with meats as a relish.—Mrs. Oliver Arbogast, Los Angeles.

Here is another:

Fill jars with perfect Royal Ann cherries, with their stems. Boil together water, vinegar and salt in the proportion of 1 cup water, 1 cup vinegar, 4 level tablespoons salt. Cool liquid, cover cherries, fill jars full and seal tightly.—Mrs. Henry Pfeffer, Los Gatos.

Others have kindly sent in directions for making cherry olives, but as they differ very slightly from the two given we do not publish.

AN EXCELLENT DOUGHNUT RECIPE

One cup sugar, 2 eggs, $\frac{2}{3}$ cup buttermilk, 2 level tablespoons shortening, $\frac{1}{2}$ teaspoon soda, 2 teaspoons baking powder, 2 medium sized Irish potatoes, 1 teaspoon salt, cinnamon and nutmeg to taste. Boil potatoes, mash fine, add shortening, sugar, eggs, and wetting. Sift soda and baking powder into flour. Use sufficient pastry flour to roll out and fry—never greasy.—Mrs. John E. Wilbur, Pasadena.

VINEGAR HELPS KEEP CANNED VEGETABLES FROM SPOILAGE

If it were not for the microscopic but ever present bacteria, housewives would not have much trouble with canned products spoiling. As it is, however, if they are given half a chance bacteria will soon make a jar of fruit or vegetables ready for the garbage bucket.

It may not always be possible to kill all bacteria in home canning for some of those germs can endure a high degree of heat for a long time. Nevertheless jars and cans must be processed long enough to kill as many bacteria as possible.

In the case of fruit or tomatoes, even though many of the bacteria survive the short heating process, few or none will grow because of the acid present. Heavy syrup added to the fruit also prevents the growth of bacteria. For this reason fruit requires a much shorter time of processing than vegetables, with the exception of tomatoes.

Results thus far indicate that one to four tablespoons of vinegar added to a quart jar help greatly in reducing the amount of spoilage. When the vinegar is added the time of processing can be reduced. For instance, it is found that corn, which ordinarily is difficult to can successfully, keeps well when four tablespoons of vinegar are added to a quart jar processed three hours continuously.

SAD, BUT SO

It only takes a few minutes to find in others the faults we can't discover in ourselves in a lifetime.

It is sometimes well to remind ourselves that thoughtful silence says more than thoughtless chatter.

Select a Piano as You Would Select a Tool

Unlike many pieces of furniture, a Piano is also a Tool. It is a tool as truly as is a mowing machine, a block and tackle, or a paint brush. It has a given task to do, and performs it as well or badly as its inherent materials and craftsmanship will permit.

Practical men detest "cheap" tools, even for temporary use. The tool with a casting that breaks or an edge that turns is never a source of satisfaction. How much more, then, is such a tool to be abhorred if it is expected to serve for a lifetime!

Approach your purchase of a piano with this question in mind: Is this instrument—this tool—going to render good service all the years of my life? Will its tone remain true? Its action pleasing? Will the children, as they grow up, love and revere it and feel proud of it? Will it keep its place as the very center of our home? Or will it be pushed into a corner and left silent and forgotten, like an old mowing machine that broke a casting—like a tool that failed?

An inexpensive piano need not be a "cheap" piano. We have pianos at all prices and will gladly arrange convenient payment terms. But in selling you a piano, it is our steadfast desire to sell you piano satisfaction.

Live turkeys, young spring, 50@55 lb., market firm; old 40@45, market firm. Dressed turkeys, young, large, 60@70, market firm; old, 45@50, market firm. Live Belgian hare, 18@22; dressed, 25@30. Squabs, large, 55@60 lb., market firm. Pigeons, 3.50@3.75 dozen, market firm. Guinea hens, young, \$15 dozen, market firm.

LIVESTOCK

Western Meat Company prices are:

Cattle: Grass steers, No. 1, weighing 1,000 to 1,200 lbs., 9½@10; do, 1,200 to 1,400 lbs., 9@9½; do, second quality, 7@8; thin, 6@7. Bulls and stags: Good, 4@5; fair, 3@3½.

Cows and heifers: No. 1, 8@8½; second quality, 6@7; common to thin, 2@4.

Calves: Lightweight, 10½@11½; medium, 8@9; heavy, 7@8.

Lambs: Milk, 9@9½; yearlings, 7½@8.

Sheep: Wethers, 7@7½; ewes, 5½@6.

Hogs: Weighing 100 to 150 lbs., 16½; 150 to 225 lbs., 17; 225 to 300 lbs., 16½; 300 to 400 lbs., 15½.

California Farm Bureau fat hog auction sales continue to show most satisfactory returns to the growers. Prices for top-pers have ranged at almost every auction point above \$10. The points which gathered the greater number of cars, and apparently finished stuff, secured the greater number of bidders. One sale of four cars at Visalia, Aug. 10, was most satisfactory to shippers and we give entire.

Killefer Bean Cutter

KILLEFER
EFFICIENCY

It Is Time You Were Ordering That Bean Cutter

Cutting time will soon be here and you will want to be prepared.

We build two weights of sled cutters, the above cut shows our No. 281 wood frame cutter. For heavy ground where a stronger cutter is needed, we make a steel arch frame cutter at a slight additional cost.

We are selling extra blades at the same price as last year, \$12.00 per pair, but the price will go higher when the present stock is gone; so it behooves you to get your orders in as soon as possible.

If your dealer cannot supply you, order from us direct. Write for catalogue No. 2.

Layers—6-crown, 20s, per box, 5.50; 6-crown, 10s, per box, 2.95; 6-crown, 5s, per box, 1.60; 4-crown, 20s, per box, 4.70; 4-crown, 10s, per box, 2.55; 4-crown, 5s, per box, 1.40; 3-crown, 20s, per box, 4.40; 3-crown, 10s, per box, 2.40; 3-crown, 5s, per box, 1.30; clusters, 20 15-oz. cartons, box, 5.20; clusters, 12 2-lb. cartons, box, 6.00; clusters, 4 5-lb. cartons, box, 6.00; vineyard run, 100's (strap 19c ex.), 21.00.

HONEY

Rafael & Wing, in Western Honey Bee: Honey is moving very slowly. There is a large quantity of Australian, New Zealand and Hawaiian honey on the market offered as low as 12 cents. Prices offered to producers: White orange, 20¢/21; orange, 18¢/19; water white sage, 20¢/21; sage, 18¢/19; light amber, 15¢/16; amber, 14¢/15; comb honey No. 1, 6.25; No. 2, 5.75; wax, 40¢/42.

GRAIN

Wheat: 2.75@2.85.

Oats: Red feed, new crop, 2.50@2.70.

Barley: New feed, 2.26@2.35; shipping, 2.50@2.60.

HAY

Alfalfa Growers of California under date of August 1:

No. 1 Dairy Alfalfa	29.00
Standard Dairy	26.00
Stock Hay	24.00

Under date of August 14, A. W. Scott Co. says:

Receipts past week 3,344 tons. Some little is coming in upon consignment in cases where no direct offers have been

made satisfactory to producer. The market has gone off practically 2.00 a ton on all grades. With an unusually light demand in prospect and a fair sized crop averaging up all over the state, indications are that lower figures will be reached before warehouse and carrying charges are made for the season. Interior demand is fair and there is more business going on throughout the state than in our local market. Export has been practically confined to a few shipments for government account on existing contracts.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market in San Francisco (for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions):

Wheat Hay, fancy	27.00@29.00
Wheat Hay (light 5-wire bales)	24.00@26.00
Tame Oat Hay	24.00@26.00
Wild Oat Hay	18.00@20.00
Barley Hay	18.00@21.00
Alfalfa Hay, first cutting	18.00@23.00
Alfalfa Hay, second cutting	22.00@26.00

Citrus Markets

Los Angeles, August 18, 1920.

Occasional long prices have been paid during the last week, at least one sale has passed the \$10 mark. The auctions generally show good firm prices ranging around \$5 or \$6 for first class goods. F. o. b. quotations are crowding up close to \$6 for good stock, regular sizes. The coming crop promises exceptionally well and from present indications will be the largest in several years.

The promised stiffening of the lemon market has as yet failed to materialize and while f. o. b. quotations are around \$3 but few sales are made. Auctions along Atlantic ports are distressingly low.

Shipments

Shipments to date from Southern California since Nov. 1, 1919: Oranges, 27,052 cars; lemons, 7,016; total, 34,068. To same date last season: Oranges, 30,509; lemons, 8,688; total, 39,197. From Central California to date this season: Oranges, 5,375; lemons, 288; total, 5,663. To same date last season: Oranges, 3,714; lemons, 251; total, 3,965. Northern California this season: Oranges, 261; lemons, 23; total, 284. To same date last season: Oranges, 244; lemons, 2; total, 246.

Stock Raising in WESTERN CANADA

Is as profitable as grain growing. Successes as wonderful as those from growing wheat, oats, barley, and flax have been made in raising Horses, Cattle, Sheep and Hogs. Bright, sunny climate, nutritious grasses, good water, enormous fodder crops—these spell success to the farmer and stock raiser. And remember, you can buy on easy terms

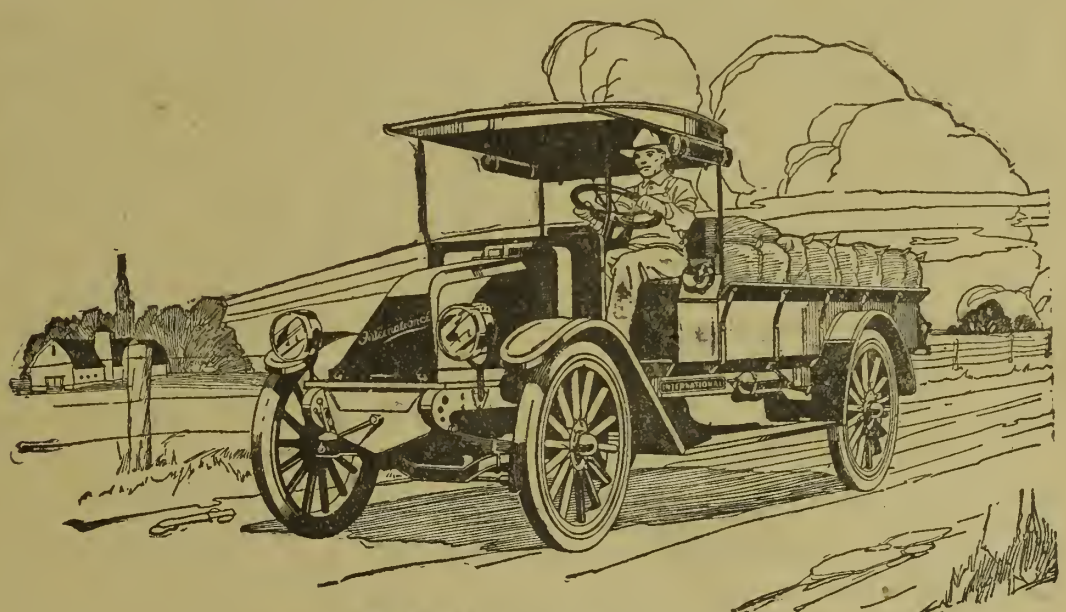

Farm Land at \$15 to \$30 an Acre

—land equal to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—grazing land convenient to good grain farms at proportionately low prices. These lands have every rural convenience; good schools, churches, roads, telephones, etc., close to live towns and good markets.

If you want to get back to the farm, or to farm on a larger scale than is possible under your present conditions, investigate what Western Canada has to offer you.

For illustrated literature with maps and particulars regarding reduced railway rates, location of land, etc., apply to Department of Immigration, Ottawa, Canada, or

Make Every Minute Pay Dividends

DURING these days of short working hours, high wages and unsettled labor conditions, every hour saved for essential work is money in your pocket. Every hour you spend on the road between your farm and town represents unproductive time. During your busy season someone is getting high wages for this time, or you personally are spending valuable time. Make every minute pay dividends. Reduce the number of hours spent on the road and increase the hours of productive farm work.

You can haul your farm products to town with an *International Motor Truck* and haul supplies back to the farm in about one-fourth of the time that would be required with a team and wagon—a road saving of 300%. Thereby you save, during the year, many hours for necessary farm work—hours and minutes that total into days. You save money in wages, or at least make the high wages that you are paying someone pay you greater returns.

International Motor Trucks are made in nine sizes, from ¾ ton to 3½ ton—a size and style for every hauling requirement. A letter or post-card to the address below will bring complete information descriptive of these low-cost hauling units that make every minute pay dividends.

FISK

Red-Top Tires for Small Cars

WE have specialized in a tire for small cars—The Fisk Red-Top. It is pre-eminently a tire designed for hard service under all conditions.

Its success is due primarily to two things: extra size and extra strength.

For size, compare it with any other tire on the market. As an instance, you will find the Fisk Red-Top 30x3½ is larger than the so-called standardized oversize tires.

To get the extra strength an extra ply of fabric is built into the Fisk Red-Top. The tread is also extra heavy. This means both side walls and tread stand up under the most severe usage.

In every section of the country

small car owners are getting from Red-Top Tires greater mileage, greater ease in riding and with the least attention of any tire that is made.

The Fisk Red-Top Tire in its present construction was put on the market early in 1918. It was not offered to our trade until we felt sure that our facilities for production would be equal to the demand—yet the demand was so great that for fifteen months after we were unable to catch up with orders.

With our present greatly enlarged equipment, however, we are now ready to supply Fisk Red-Tops promptly. You will find wonderful satisfaction in this tire especially designed for your small car.

*Next time—BUY FISK
from your dealer*

Like all Fisk Tires, Fisk Red-Tops are backed by the Fisk Ideal, "to be the best concern in the world to work for, and the squarest concern in existence to do business with."

No. 9

Number of Farms in California

THE material now being sent out by the bureau of the census is affording some wonderfully interesting reading for Californians. Every agricultural county will be highly gratified at the growth shown by these figures. The old mining counties are the only ones which show decrease in population. They also show decrease in number of farms. One of the counties showing greatest proportionate decrease in population had 42 farms in 1910 and 21 in 1920. The county showing greatest increase had 7,919 farms in 1910 and 13,013 in 1920. Only one county in the state, Alpine, over against the Nevada line south of Lake Tahoe, contains no subscriber to the California Cultivator. This particular fact, however, is not shown in the census returns. The total population of this mountain county is 243. Its population in 1910 was 309. This is one of the two counties of the state which has no railroad.

The counties which have increased are those which have natural agricultural advantages, especially those counties where irrigation development has been greatest. There great tracts have been made into small farms until in some cases there has been 100 per cent increase in number of farms. For instance, Fresno County's farms have increased from 6,000 to nearly 9,000; Glenn, from 600 to 1,200; Imperial, from 1,300 to 2,800; Kern, from 1,100 to 2,000; Los Angeles, from almost 8,000 to over 13,000; Madera, 500 to 1,400; Mendocino County, 1,300 to 1,700; Merced, 1,800 to 2,800; Orange, from 3,000 to 3,900; Riverside, 2,600 to 4,000; Sacramento, 1,600 to 2,900; San Diego, 2,200 to 3,100; San Joaquin, 3,200 to 4,500; Santa Clara, 4,700 to 5,400; Stanislaus, 2,600 to 4,400; Sutter, 873 to 1,441; many other counties, exact figures for which may be seen in center box.

So far as the population figures have been received they seem to be influenced by the number of farms, though of course manufacturing centers have had great influence. Kings County's population in 1910 was 16,230; in 1920 it

is 22,031. Placer County, 18,237, increased to 18,584; Placer County is one of our richer horticultural counties, though it must be borne in mind that her lack of large increase in population may be due to the Japanese situation which is most serious there. Riverside County, 34,696, increased to 50,297. Colusa County, 7,732, increased in the ten years to 9,290. Del Norte, 2,417, increased to 2,759. Shasta County, as will be noted in the table, shows decrease in number of farms and decrease in population from 18,920 to 13,311; it will be interesting to observe the returns at the 1930 census and see what will be the effect of the greater number of small farms made possible by the Anderson-Cottonwood project just completed. Sacramento County, 67,806 in 1910, has increased to 90,978. Tehama County, 11,401 to 12,802. Glenn County, 7,172, increased to 11,853. San Benito County, still running largely to big hay ranches, shows an increase, though not so large as irrigated counties, 8,041 in 1910, increased to 8,995. Yolo County, 13,926, increased to 17,105. San Bernardino, 56,706, increased to 73,401. Orange County, 34,436, increased to 61,375. Imperial County, 13,691, increased to 43,383. Madera County, 8,368, increased to 12,203. Monterey County, 24,146, increased to 27,980. Yuba County, 10,042, increased to 10,375; it may be noted that Yuba's increase in number of farms is also slight.

Many of the counties have not yet received returns, for instance, Los Angeles, which shows 13,000 farms, will be expected to show great increase in population. Its principal city shows an increase in the ten years of 80.3 per cent, with a present total of 575,480. San Joaquin County's figures are not yet in, but its principal city, Stockton, shows increase in population from 23,253 in 1910 to 40,296. Alameda County's figures are received, but are plainly in error. Its principal city, however, Oakland, shows an increase from 150,174 in 1910 to 216,361.

The premium winner, in this —(Continued on Page 251.)

NUMBER OF FARMS

Preliminary figures by the bureau of the census, Washington, showing number of farms in California, by counties:

County	1920	1910	1900
Alameda	2,793	2,422	2,787
Alpine	21	42	37
Amador	500	537	560
Butte	2,102	1,500	1,179
Calaveras	621	632	575
Colusa	781	667	582
Contra Costa	1,681	1,465	1,511
Del Norte	139	114	131
El Dorado	728	716	759
Fresno	8,933	6,245	3,290
Glenn	1,215	663	529
Humboldt	1,738	1,534	1,500
Imperial	2,877	1,322	0
Inyo	487	438	424
Kern	2,053	1,167	1,098
Kings	2,156	1,837	932
Lake	771	603	723
Lassen	603	502	555
Los Angeles	13,013	7,919	6,577
Madera	1,423	573	523
Marin	704	498	462
Mariposa	448	330	381
Mendocino	1,706	1,356	1,452
Merced	2,856	1,856	999
Modoc	753	736	638
Monro	75	91	112
Monterey	1,747	1,658	1,850
Napa	1,406	1,537	1,336
Nevada	477	644	522
Orange	3,931	3,165	2,388
Placer	1,274	1,062	1,076
Plumas	146	221	267
Riverside	4,001	2,688	2,340
Sacramento	2,975	1,601	1,392
San Benito	936	921	907
San Bernardino	3,997	2,949	2,350
San Diego	3,131	2,298	2,698

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

MORE SHODDY

The National Sheep and Wool Grower of America is still asking: "Shall the people's rights and sheep husbandry be sacrificed to further fatten the bloated wealth of rag and shoddy venders?" This question is followed by an appeal for the enactment of the Truth in Fabric bill, sometimes referred to as the French-Cap-Per measure.

Shoddy formerly referred to only the cheapest of fabrics, but the wool producers assert that today shoddy enters into the manufacture of cloth used in highest priced garments. Hence the need of an enactment to protect the consumer, likewise preserve for the producer of virgin wool a market which under present methods must be destroyed.

BE CAREFUL

Pear growers have been appealed to for years never to permit wormy pears to go into the market. More than being appealed to, they have been warned by state and county horticultural commissioners that they must not send such pears to market, and fines have not been infrequent. Now come the Eastern inspectors with complaint and warning that pears sprayed so that they show a deposit

of arsenates must not enter their markets.

All of which shows that the producer is between the deep blue sea and the other fellow. However, so far as any suggestions have been made, the situation does not concern the grower who has sprayed his fruit so much as it does the shipper who has been careless in one of the details of packing. No injury has been caused other than that overcareful inspectors at the Eastern end have been zealous in making inspection.

TURKEY BUZZARDS

The time was when people looked at the common house fly as a sort of a beneficial pest. It seemed to be taken for granted that it was more or less a scavenger because it was always found where filth was greatest. Hence the ceiling was often decorated with asparagus tops or other "roosts" for the pests. This commodation was, of course, to induce them to remain out of the soup and pudding, but we learned that a better way was to remove the pest houses which bred this menace to public health and also were taught the slogan, "Swat the Fly."

We are now changing on another "friend of the humans," the turkey buzzard, which from time immemorial has been protected by law because he removed a menace to public health which the farmer himself refrained from removing. These carrion birds have now proven themselves to be carriers of disease from ranch to ranch or from community to far away community. Not only will the legal protection be removed, but it is possible that a buzzard "drive" may take the place of some of our jackrabbit drives of the past. In any case the state department of agriculture is giving warning and calling attention to the fact that hog cholera, anthrax and even bubonic plague have been carried by these pests.

STUDYING MARKETING

In its larger sense the farm bureau became a national institution with the beginning of the war. The duties confronting the farmer were readily realized, but one of the greatest forces in organizing and perfecting the activities of the producers of the country was the farm bureau composed of the farmers themselves. This was not because the organization had assumed national scope other than through the oneness of the patriotic spirit of the times. But the war was no sooner over than the farm bureau people saw the necessity for a more concrete organization with definite aim. State organizations were formed and in turn one great national federation with headquarters at Washington.

This organization has become an active live force, not only in things concerning the farm but in things concerning the nation. It has now taken up one of the fundamentals of successful agriculture, marketing, and is asking questions as to cooperative marketing, especially selling expense and how to eliminate ruinous fluctuations. The grain growers of the Middle West have been forced to suffer losses because of the operations of the bulls and bears in the grain pits.

"If cooperation has enabled Californians to sell citrus fruits, raisins, peaches, prunes, walnuts, and alfalfa hay at prices which are fair to the consumer and profitable to the producer, let us go to California and learn the underlying principles of coopera-

tive marketing." Hence, a committee of 17 representing grain growing sections has been appointed by President Howard and is spending this week studying California cooperative marketing methods. This committee has had sessions in Denver and in Salt Lake City, in that section having conferences largely with those connected with wool growing interests.

California has hearty welcome for these grain growers. Our cooperative ideas have been carried to Florida and made into one of the most workable and profitable organizations by Florida citrus growers. Argentina, South Africa and Australia have all drawn upon us and California glories in passing on information as to the successful methods its farmers have worked out.

COTTON QUARANTINE

Get together. When folks grow a crop which other folks want and want at once, it is rather netting to both the grower and the manufacturer or consumer to have a third party stop, at least temporarily, the whole transaction. Arizona is producing some of the world's highest quality cotton. The great Goodyear factory in Los Angeles, on which millions has been spent to make tires for the western part of the United States, wants that cotton. Likewise, other growers on the California side of the Colorado are anxious for the seed for growing crops in this state. The weevil, the boll worm and other pests are not wanted either in Arizona or California. Hence authorities in both states having to do with crop pests, or rather the prevention of entrance of crop pests, have made regulations which safety seemed to demand.

In order that there might be less of misunderstanding and more of cooperative action between producers and consumers in both states, a meeting was called in Los Angeles last week. It was recalled because of forced absence from the state of Director Hecke of the state department of agriculture, but because of the great need and in order to secure information as to steps necessary, representatives of the state administration of Arizona came and conferred with California representatives, including growers, representatives of the state department of agriculture and members of the Los Angeles chamber of commerce. The Arizona representatives were: Andrew Kimball, state commissioner of agriculture, Thatcher; W. H. Robinson, secretary Arizona commission of agriculture, Chandler; Don C. Mote, state entomologist and commissioner of agriculture and horticulture, Phoenix.

Commissioner Kimball of Arizona, also a member of the Western State Plant Quarantine Board, urged cooperation of all interests and suggested that Arizona's appropriation, now \$30,000, be increased to \$100,000. He also felt that the state of New Mexico should cooperate in the fight. State Quarantine Officer Vary of California spoke of the prohibition as to importing cotton seed or cotton products excepting under certain regulations. D. B. Mackie also of the California department of agriculture, touched upon need of more fumigation plants, some of which have been built under Mr. Mackie's plans, which have made possible fumigation methods 100 per cent efficient.

The meeting resulted in a resolution calling for a committee of five to arrange for a permanent committee representing both producing and manufacturing interests, as well as the two state administrations, to secure cooperative action and end embarrassment and even stagnation.

FAIR SEASON OPENED AT PATTERSON

THE first fair of the 1920 season was held at Patterson August 19-21, and during those three days the community laid aside all work and helped to make this annual event a success.

The Patterson fair has never aspired to be rated "the biggest county fair in the state"; indeed, the idea back of the show has been directed toward making it a community affair, and as such it has succeeded.

Aside from the usual attractions offered at most fairs, the directors centered their efforts toward attracting livestock exhibitors. The Patterson community believes in better livestock; the farmers of the district believe in pure bred, and apparently the commercial interests of the town realize that the prosperity of the community is closely dependent upon livestock, so naturally livestock was the outstanding feature of the fair. In a section that is noted for its dairy industry it was to be expected that dairy cattle would occupy the center of the stage. Likewise in such a notable Holstein community it was to be expected that the Black and Whites would feature the livestock department. It is quite doubtful if many of the larger shows of the season will boast of a larger display of Holsteins than were shown at Patterson—and the quality was there, too; indeed, many of the exhibits will go on to the state fair.

G. E. Gordon, assistant farm adviser of Los Angeles, served as livestock judge and his work met with the general approval of all the exhibitors.

Bridgford Holstein Company of Patterson were the heaviest winners in the Holstein classes, securing all the championships. Other awards were distributed among the following exhibitors: R. L. Holmes, Modesto; H. E. Cornwell, Modesto; H. A. Steimerjohan, Turlock; Frank Klutz, Patterson; Azeveda Bros., Patterson; M. E. Waters, Patterson; A. M. Bibens, Modesto; J. W. Benoit, Modesto; R. H. Davis, Modesto; D. & H. Rowles, Modesto; E. Peterposten, Hughson, and M. J. Ruddy, Modesto.

The get of sire class was won by Bridgford on the get of King Segis Alcartra Prilly; Cornwell was second with the get of Sir Johana De Kol Rag Apple, and Benoit was third with Lone Oak Terzool Korndyke.

The produce of Empress Korndyke Pontiac won for Bridgford. Peterposten was second with the offspring of Irene Beauty and Davis was third with the produce of Bonita Hartog of Glenn Eva 2d.

A feature of the fair was the showing made by the boys and girls who had entered in the calf club classes for senior and junior heifer calves. The calves were secured through the Stanislaus County Holstein Breeders Association and were said to represent an average investment of \$400 each. Of the 18 senior calves shown in the open class five were owned by members of the calf clubs. Incidentally it is of interest that the winner in the open class was a calf owned by Master Clay Steimerjohan. His calf also won the club class for seniors and his brother, George, won the junior class. Other boys who showed in the club classes were: Manuel Azeveda, Patterson; Adelbert Benoit, Modesto; Everett W. Fox, Modesto; Reuben Steimerjohan; Smith Bibens, Modesto, and Linnie Cornwell, Modesto. Miss Wilhelmina Fox and Miss Katie Steimerjohan competed with the boys. Many of the calves shown will be entered at Sacramento.

The Modesto Guernsey Farm, Modesto, and C. E. Fisher, Hughson, were the only exhibitors of Guernseys.

Duroc-Jersey swine were shown by W. M. Way and Son, Modesto, and Ordway and Snyder of Hughson.

George M. York of Modesto was the only exhibitor of Berkshires.

N. W. Thompson of Patterson had an extensive and high class lot of Percheron and Belgian stallions on exhibit.

One Dollar Yearly

Cultivation of Redwood Stump Land

By Mrs. Jessie M. Thomas

THE "Save the Redwoods" movement bids fair to bear fruit, but another redwood problem is use of the land once the timber has been removed. Thus far it has been of practically no value agriculturally. The logged over lands have been for years held in great tracts by the lumbering companies, useless and unproductive, bringing no income to industry and practically none to the government in taxes. Thousands of acres in this one county are now acres of barrenness, covered with a riotous growth of wild blackberries trailing amid the blackened stumps and snags, and in some places with the brushy second growth

man Kent and Director of National Parks Stephen T. Mather have each contributed \$15,000 for this purpose, and Humboldt County has matched them with an appropriation of \$60,000 for the purchase of these millsites.

Hence it is to the interest of not only the holders of large areas of logged over lands but of those who are working for the establishment of a national park here to rehabilitate this land, for the pride of the people of Humboldt will not allow these patches of unsightliness to remain in the midst of surrounding beauty, if the national park is finally obtained.

The lumbering interests which control great areas of this land have promised to cooperate with the county farm adviser in this investigation. Samples of the soils in the various parts of the county have been sent to the University of California for

Third is burning the stumps. But the heart of the redwood is noted for its fire resisting qualities, and the roots and stump near the ground retain this safeguard against destruction for years and years. The process of burning out the stumps is therefore barely possible, but is such a long one that it too is unprofitable.

So it is easily-seen that to make this

Before It Became Stump Land

Stump Land
Desolation after the timber has been cut.

careful analysis. As the second step Prof. Nelson, soil expert of the university, is to visit these same sections. In the meantime seeds of various sorts have been sent for, and in 12 different localities little sections are to be set out to different crops and the results watched throughout the year, if present plans carry.

The expense of pulling the huge stumps and clearing the ground of roots is prohibitive. Three methods of clearing are available. First to come to mind is naturally the mechanical stump puller. But the stump pulling machine has yet to be made capa-

ble of handling stumps of the enor-years, without depending upon an in-

land attractive to the small rancher, the man with limited means, some crop must be found that can be planted between the stumps, for men with means are not spending their money on such projects as this.

Plowing between the stumps is not practicable because of the underlying roots close to the surface. In the instances where thrifty ranch men have made these little places habitable they have been able to support their families by part time work while grubbing out the roots, clearing the brush and getting intensive cultivation started in the space of two or three or more

Strawberry Field on Cut-Over Ground
Cultivation close to the stumps is impossible. This is a successful and profitable patch.

mous size which these redwoods attain, whose roots extend over a surface of many square feet, often interlocking with the roots of other trees.

The second process is by the use of dynamite. Indeed, many stumps have been "blown" out in this county with this explosive in days past, but the expense of dynamite is now beyond the ordinary purse. And then again this process leaves the great hole in the ground, which must be filled, and the stump, which must be disposed of.

come from the ranch itself. There are now a number of such little berry patches and orchards dotted here and there with black stumps, not picturesque indeed, but providing the family with a home and a small income until the time when the larger fruit matures. Walnuts, especially, are being planted in the warmer sections and under the more favorable conditions.

The fact that the wild blackberry thrives on the logged over and burned (Continued on Page 263.)

of redwood which probably will never be of any value as lumber.

Since the state highway has been put through the redwood forests in southern Humboldt little lumber companies with holdings along this route have cut out small tracts with great rapidity. They have used the highway and heavy trucks as their means of transportation, thereby ruining the roadbed of the highway with the hauling of enormous loads and ruining the scenic highway more irreparably. The greater part of this cutting in hitherto unmarred forests has been stopped on the highway proper, through the efforts of the "Save the Redwoods League" to establish a national redwood park in this vicinity. Congress-

Agriculturally these lands have not in the past proven of any great value except in isolated cases where some thrifty farmer by intensive cultivation and no end of care and perseverance and hard work has hewn for himself a home out of the most unpromising conditions. An occasional fine dairy ranch has resulted where the owner has had the time and means to spend to prepare the ground by removing the stumps. But this process is both expensive and lengthy. Some crop there must be which can be put into this ground with a small amount of preparation and depended upon to pay year after year. And it is this crop, or possibly more than one, which is being sought.

Agricultural News Notes of the Pacific Coast

Northern California

Almonds are being harvested in the Chico section.

There have been serious fires in the Trinity national forest.

Codling moth is reported by inspectors scarce in the pear districts.

September 11 will be State Farm Bureau Day at the Sacramento fair.

The Glenn County farm bureau is operating a lumbering department.

The Sonoma County wool pool has just sent a consignment of wool to Boston.

Indians from Modoc and Trinity are coming into Anderson Valley to help in the prune harvest.

The high school at Los Molinos is the first in Tehama County to install a course in agriculture.

The management of the state fair has announced that 30 counties have engaged space for exhibits.

A quarter acre has been set aside as a children's playground on the state fair grounds at Sacramento.

Durham proposes to settle the dispute between Chico and Oroville by offering itself as county seat.

Placer County farm bureaus are taking a vacation this month. No local meetings will be held until September.

Red spider is prevalent throughout the Sacramento Valley and the Sierra foothills, causing considerable leaf drop.

E. E. Kauffman of the U. S. bureau of crop estimates has just finished survey of crop conditions in Sonoma County.

Local farm bureau meetings will be held in Shasta County at Millville, August 24; Palo Cedro, 25; Hat Creek, 27; Fall River, 28; Mountain, 29.

The farm bureau of Tehama County is working on plans for a marketing organization to be incorporated as the Tehama County Farm Bureau Exchange.

The farm bureau of Tehama County has set Labor Day as the time for its annual meeting and election. It will be held at Courtland Park in Los Molinos Colony.

The California Cattlemen's Association is planning to hold auction sales of fat cattle at Cottonwood and Big Meadows in Shasta County during the last of this month or the first of September.

The Cloverdale center of the Sonoma County farm bureau held its annual picnic on August 13. One of the principal speakers was Dr. Elwood Mead, who discussed the farm labor problem.

Farm Adviser Curtis of Tehama County is arranging to plant a number of trial plots of new varieties of barley this fall. Among these are Tennessee Winter, California 4,000 and Mariout.

Director Davis of the U. S. reclamation service will hold another conference with workers for the Iron Canyon project. A conference was recently held in San Francisco. This second meeting will be in Denver.

A call has been issued for a state conference on the Japanese question to be held in San Francisco, September 2. The object of the meeting is to consolidate all interests in this state favorable to the passage of the anti-alien law.

Central California

Kings County fair September 20-25.

Fresno district fair, September 27 to October 2.

Large shipments of Malagas are being made to Fresno County.

The boys of the Modesto high school have organized a pure bred Jersey calf club.

Cantaloupe season at Turlock is over. Shipments total about 3,500 cars.

Dr. Coit of the state university is investigating fig splits in the San Joaquin Valley.

The Fresno Canal and Land Company places a valuation of \$5,339,771 on its holdings.

Peach growers expect an opening price of 17 cents, two cents higher than last year.

The price of 15 cents per pound in the sweat box to the grower is pleasing to raisin producers.

Fresno County fruit growers complain of fruit stealing. At present high prices the loss is severe.

The first full car of Malagas out of the San Joaquin Valley commanded \$4.52 per crate in New York.

San Joaquin Valley power users are protesting against grant of power sites in the Sierra Nevada to Los Angeles.

Hanford is doing some wholesale arresting of truck drivers because of overloading trucks on public highway.

Fresno reports "Thompsons and Malagas rolling in, good prices, shipments will surpass all previous records."

Grape growers and shippers of Lodi have organized to protect themselves against exorbitant demands of field laborers.

San Joaquin Valley real estate has much of it been given an increase in market value by the growing cotton industry.

It is reported that Miller & Lux will sell somewhat over 60,000 acres of land, mostly along the line of the Wasco-Lost Hills road.

Fruit growers are concerned over the increase in freight rates which takes place this week. Increase will be about 33 1/3 per cent.

The fruit buyer E. Y. Foley, who purchased 150 cars of raisins at the New York auction, announces that all are sold and at an advance.

Farm adviser of Fresno County is receiving communications from cotton growers stating number of acres of cotton being grown and requirements as to labor.

The first cotton festival of the San Joaquin Valley is planned by the Kern County chamber of commerce. It will be held on the fair grounds at Bakersfield the middle of October.

Members of the Central California Milk Producers Association met recently at Modesto. Newspaper reports say "Meeting was a stormy one"; also that "Dairymen vote to remain with big association."

The fumigation season, which started July 1 in Tulare County, has resulted in 858 acres of citrus orchards being treated for gray scale. Liquid gas has been used exclusively. The season has proved so favorable to development of the scale that the natural increase, where there has been no fumigation, has been great.

Southern California

Escondido cannery started August 15 on tomatoes.

Perris cotton growers will build a \$12,000 two stand gin.

Orange County sugar beets are running around 16 per cent.

The earliest dates are now being picked in Coachella Valley.

Palo Verde Valley peach growers are receiving as high as \$110.

Lima bean crop has been somewhat reduced by the excessively warm August.

An Ontario fig grower is raising cotton as an intercrop and finds it profitable.

Orange County fair opens at Huntington Beach, October 7, for three days.

Coachella Valley, Riverside County, shipped 28 cars of exceptionally early grapes.

Imperial Valley growers of Pima cotton think the fiber should sell for \$1.15 to \$1.20.

Orange Heights Fruit Association of Corona will improve packing houses by expenditure of \$20,000.

Riverside fair management is hoping to secure Professor Fitch of Kansas agricultural college to judge dairy cattle.

County Horticultural Commissioner Morris of Orange County is insisting on more careful work by fumigators of citrus trees.

W. B. Parker of Coachella Valley has discovered a method of rooting date offshoots much quicker than by former methods.

Anaheim Walnut Growers Association is rebuilding and improving its packing house. The work will be completed about September 15.

Orange County farm bureau is discussing matter of having department of chemistry with laboratory in order to investigate as to values of fertilizers and other products.

Coachella Valley, Riverside County, is proving to be a large and profitable grower of Thompson Seedless. The crop is very early, the season this year having closed by July 15.

The California Lima Bean Growers Association will close its 1920 membership pool on August 25. The total paid for last season's deliveries has now reached nine cents. More yet to come.

Cotton picking began in the Palo Verde Valley a week earlier than last year. One thousand Mexican cotton pickers will be brought in to assist in the harvest. A flat rate of two cents a pound will be paid.

Imperial Valley cantaloupe growers are organizing, or at least making an effort for a closer cooperative organization to handle next season's crop. Meetings are being held this week in various Imperial Valley towns.

President Howard of the American Farm Bureau Federation and 15 other farm bureau leaders from the Middle West are visiting California this week learning as to cultural methods and more particularly as to cooperative marketing associations.

A meeting of cotton growers and dealers is to be held in Los Angeles Friday of this week to discuss quarantine on cotton seed and advisability of revising present orders as to seed used, machinery, etc. The idea is to keep all cotton pests out of the state.

The Coast and General

Puyallup, Washington, has a new canning plant operating since July 19.

Farmers of five counties picnicked at Point Defiance, near Tacoma, August 7.

The state of Washington reports "June drop late, not heavy, yield of apples 75 per cent of 1919."

The Washington Egg and Cooperative Association now has a membership of 200 and over 100,000 laying hens.

A fruit growers association at Mosier, Oregon, has new tile and stucco warehouse which handled 150 cars last season.

Whitman County, Washington, farm bureau purchases distillate for its tractor owning members in lots of three cars at a time.

Farmers near the Waterville experiment station, Washington, recently held field day at the station and discussed marketing problems.

Farmers in Graham County, Arizona, have been having so much trouble with rabbits this year that they have organized rabbit drives. These drives have resulted in the killing of several thousand rabbits.

Seven hundred and ninety-nine carloads of Garbanzos have been shipped through Nogales, Arizona, from Mexico so far this season. Their value is said to be something like three and one-half million dollars.

The August report of L. M. Harrison, statistician of the bureau of crop estimates of Arizona, gives the probable yield of American Egyptian cotton for the state as 90,000 bales and estimates the short staple crop at 20,000 bales.

A company has been formed to sink a shaft hoping to strike the metal of the big meteor in northern Arizona west of Winslow. A crater at this point is supposed to have been caused by the falling of a meteor thousands of years ago. Previous attempts to drill have resulted in failure.

D. A. Gilchrist, the rodent pest director of Arizona, announces that the United States biological survey has perfected a new poison which is far superior to that previously used in the poisoning of gophers, prairie dogs and squirrels. This new poison is being used in Yavapai County.

It is reported that the Indians on the Navajo reservation are returning to their work of making Navajo Indian blankets. The high price of wool during the past few years has had a tendency to discourage blanket weaving, but this season, with wool prices low they are again making blankets.

Water users under the Salt River Valley project will pay a total of \$5.40 an acre for water and assessments for the year beginning October 1, 1920. Water this year will cost \$1.87 1/2 a foot. There is also an assessment for drainage, construction work, etc., which brings the cost of the first two acre feet up to \$5.40 an acre.

Arizona not only leads all other states in the production of copper but also in the production of asbestos. It is estimated that the output for the year will approximate 1,000 tons. The total quantity of asbestos sold in the United States for 1919 was only 1,200 tons. Although there is asbestos in various parts of the state, the principal mines which are being worked are in the Sierra Ancha Mountains near Globe.

130 California Boys Attend Oregon Agricultural College

By R. P. Royce

DURING the last two months several articles have appeared in the Cultivator relating to the college of agriculture, University of California. These articles have developed considerable discussion as to the real value of the type of instruction offered by our college of agriculture. That there should be a difference of opinion was to be expected. In general, it can be said that most of our correspondents have manifested only the friendliest feeling for the institution. At the same time all seem agreed that the time is at hand when we should seriously consider the matter of strengthening the institution.

In the first article it was suggested that inasmuch as the function of an agricultural college was to teach agriculture, it would seem that the proper place to conduct such instruction would be on a farm. That idea is further strengthened by the experiences of other states. No important state that the writer is familiar with attempts to do otherwise. If the leading states have found that agriculture is best taught under conditions where the student comes in contact with the actual application of classroom instruction to field work, and if the majority of our schools have followed such a plan it would seem that this state should profit by the accumulated experiences of the majority of states.

The writer has been mildly reproached for suggesting any need of a change and his suggestion that it might be well to consider locating the headquarters of the college of agriculture at the university farm, Davis, has generally been interpreted to advocate divorcing the college of agriculture from the university proper. The writer had no intention of suggesting such a program and sees no reason for it. There is no real reason why the college of agriculture could not be headquartered at Davis yet kept under the same general administration

operating at present. One of the most common criticisms of such a plan has been "that the students in the college of agriculture would lose the broadening influence that comes from contact with students in other professions." The basis for that objection is largely imaginary. With proper leadership as fine school spirit can be developed in a small group of students as in a larger community. It would also be found that in such a school there will be interests wide enough apart to broaden the viewpoint of any individual. Further, there is no reason why a differently organized college should not in time grow to large proportions, in which case students would gain wider contact. Another point that should not be overlooked by graduates, past, present and future, is this; that while much is gained through university campus life, there is danger of the individual being submerged in an institution of the present proportions of the University of California.

One hundred and thirty California boys and girls attended the Oregon agricultural college last year. What is the condition which induces them to seek agricultural instruction in a neighboring state? These boys and girls should prefer to attend their own state institution.

The reason for this situation can best be learned from those boys and girls themselves. Here, then, are a few of the reasons: Note the unanimity of opinion.

W. B. Hayes, Pasadena

I will be glad if I can say anything which can be used to improve the situation in this state. There are, as I see it, two main advantages to be gained from attending O. A. C. rather than California:

The higher ranking of O. A. C. among the agricultural colleges of the country. It is commonly granted that O. A. C. ranks first in the West and

second or third in the country. This is an advantage both in respect to the instruction received and in its effect on the professional standing of the graduate.

The separation of agricultural college and state university. This may be the partial cause of my point. One essential feature of the right kind of agricultural education is, I believe, the linking of the theoretical and the practical by applying the information gained in the classroom to work done in the field at the time. Under the California system, where the student spends the major portion of his time at Berkeley and the rest at Davis, this is not possible. At O. A. C., on the other hand, field work is possible at any time, and is taken advantage of. There is also, I believe, a tendency to slight the school of agriculture of a great university.

There are other minor reasons, such as the greater cost of living in Berkeley and the poor feeling which I have been told exists between the agricultural students and the others at the university.

I do not believe there is any doubt but that, if equal opportunities were offered in the two schools, the big majority of Californians would stay in this state, but with conditions as they are the number who attend the northern institution may be expected to continue to increase, as that college is constantly improving and increasing in size and reputation.

Jack Nichols, Palo Alto

I had always planned on attending the University of California, but somehow got switched to the Oregon agricultural college. Perhaps the matter of credits and requirements had the most to do with my decision. I had completed one year at Stanford University. However, when I went over to Berkeley to see about trans-

ferring from Stanford, they informed me that there were certain stated subjects which were required as prerequisites to the more strictly agricultural subjects, and that these subjects must be taken first. This would probably not allow me to graduate in three more years.

Somewhat discouraged, I wrote to O. A. C. regarding transferring. They sent me a very interesting catalogue describing the school and its activities and stated that full credit would be allowed for my work at Stanford and that they thought I would have no difficulty in completing the work in three more years.

One was a rather doubtful admission that I might get in, the other was the helping hand of encouragement. Judging from the tone of the two replies, I decided in favor of O. A. C.

A more recent instance may be cited showing what seems to be a difference between the two institutions. A clipping from a San Francisco paper deplored the shortage of farm help for this summer. It advised all those desiring employment on farms this summer to get in touch with the university farm school at Davis. I wrote to Davis and received the reply that they had no chances for employment, but that I might start out on foot, going from farm to farm until I found work.

At the Oregon agricultural college, on the other hand, the professors were all looking for students to work in their particular line during this summer. The dairy department wanted students to work on various dairies throughout the state; the animal husbandry department was looking for sheepherders and stock men, and the soils department had places open for ditch riders, etc. My present job of assistant water master of Malheur County was obtained through one of the professors of irrigation engineering.

(Continued on Page 252.)

Problems of the Fumigator

From Address by F. G. Wyman at Pest Control School, Pomona

THE first and greatest problem that confronts the fumigator is the weather, for if the weather is too hot, too cold, too wet, too dry, or windy, or if it's too electrical, we have to quit work. There are times when we do not get one row fumigated before weather conditions stop us. When using pots or cyanofumer, the thermometer must not be over 75 degrees for Navels, 72 for Valencias, or lower than 36 degrees for Navels and 38 for Valencias. We have to quit if there is moisture enough on the fruit to form a drop of water, and in electrical weather we have to leave off fumigating two to four degrees sooner than we would otherwise.

After October 1, with the pot or cyanofumer, fumigation can be commenced at two and then weather conditions must be good. If electrical conditions exist, it cannot be begun before three to four. With liquid gas, conditions change. During January, February and March, using liquid gas, we fumigated in daylight only, beginning as early as 8 a. m. and fumigating all day. We fumigated as high as 105 degrees in sun, cutting the dose from 100 to 88 degrees. We did some good work in the Claremont dis-

trict under those conditions. Last fall when we began to use liquid gas we tried to use it the same as the other methods, but found as the weather got cooler at night in November and December the gas would not generate with the thermometer below 60 if there was 50 or 70 per cent of moisture, but would generate if there were only 20 to 40 per cent of humidity with the thermometer as low as 50 degrees. Liquid gas can only be used in day time after October 1. Work done at night by hydro-cy after October 1 shows poor results, as well as jobs done earlier if there is too much moisture in the air, as the gas is absorbed by it. This also applies when there is a cover crop, as it is usually wet.

There is no doubt in my mind that with better applicators, which we will have this year, and also with experience from last year's work better jobs will be done.

Labor Second Problem

Perfect weather conditions would decrease our labor difficulties 50 per cent. If men when they started to work knew that they could work eight

or ten hours per day or night, as the case might be, they would work for considerably less than they do.

Ten years ago men were paid by the hour; now all fumigators in our vicinity are paid by the tree, the price varying according to the size of the tree. I find this more satisfactory, as it costs the grower less and the men make more money. For instance, in 1910 labor cost .086 cent per tree when wages were 35 cents per hour. In 1919 men worked by the tree and labor cost .093 cent per tree. Wages have more than doubled in the last four years but the cost to the grower has not increased over ten per cent.

In 1910 I believe men were using only 30 tents, as when they worked by the hour they would not pull more than a certain number, but when working by piece work they do not like it if there are not at least 60 in line, unless they happen to be very large tents.

In getting men for our work we get the very best that we can find. The work is strenuous; weaklings, young boys or old men, are useless. Sometimes even strong men for the first

few nights are all in, cannot sleep in the day time, gas affects them, and the work is hard. Some of the best men I have had are now working at good, steady jobs elsewhere, making \$175 to \$185 per month. It is very difficult to get them away from good paying jobs where they are employed the year round. Poorer men are easier to get because no one cares for that kind if they can do better.

Tents

In 1916 we paid \$42.50 for 45 foot tents. At present these are worth \$126 and other sizes in proportion—300 per cent increase. It is not only that the price has increased, but they are hard to obtain. If it were not that we have a good many tents on hand the cost of fumigation to the grower would be considerably higher than it is. By using liquid gas there is no burning of the tents. By using cyanofumer there is some slight burning, especially if foremen are careless. By pot use there is considerable damage done, even by the best foreman, and with the present price of canvas the use of pots from that standpoint alone makes them almost prohibitive.

While on this subject I will say that the use of the cyanofumer is a great improvement over the old pot

(Continued on Page 249.)

Inspection of Avocado Orchards

By Ernest Braunton

IN company with Miss R. Agnes McNally, secretary of the California Avocado Association, the writer recently spent a day inspecting avocado orchards in Orange County. Miss McNally is charting these orchards, and the owners will number the trees, record the amount of crop borne by each, time of ripening, age of trees and other interesting and valuable data. It was found throughout the district, as elsewhere, that the crop set of the large or Guatemalan type is generally heavy and that of the Mexican or "thin skins" very light, probably largely due to our cool, cloudy spring and early summer. The Guatemalans come from the cool uplands; the Mexicans revel in hot sunshine. A support of this theory is the fact that the Fuerte, a hybrid between the two and noted for its constant heavy croppings, has not set so heavily as the average of the years since it was introduced.

The first orchard inspected was that of L. D. Oliver, north of Yorba Linda, where there are 460 trees. Of these 320 are of bearing age, a mixture of about 20 varieties, some unnamed and inferior. Of the named varieties the

greater number are of Rey, a poor sort. These will largely be topworked to better ones. Mr. Oliver has a young orchard of 140 trees that were budded in the field to a variety from Anaheim

known as Dutton. It is a purple fruit weighing one pound, egg shaped, strong, upright grower, ripening its fruit in winter, from December to May. But it is not placed in the dozen best sorts by those who know. There is a variety named Anaheim, however, and of which Mr. Oliver has a few, that is quite promising.

Among Big Trees

The next place visited was that of

Observing a Profit Maker

L. D. Oliver and R. Agnes McNally in Oliver avocado orchard, Yorba Linda. Tree is Spinks.

W. H. Holloway, where the original Dickinson and a second one of nearly equal size are growing. The big Dickinson was heavily loaded, certainly not less than 120 per cent of a normal crop. All the larger trees are eight years old, mostly of five varieties. In a total of 125 there are 65 Fuerte (young trees), 18 Ganter, 12 Harmon, three Northrup, the two Dickinson and one each of a few others.

The really big trees were a few on the B. H. Sharpless ranch at Tustin, the home of the original Sharpless. Here, in a home orchard of 100 trees, nearly all are of that variety. The older trees are loaded with hundreds of fruits of about 24 ounces each. There are some large trees well loaded of the Monroe, so named for Mrs. Sharpless. The others are of many varieties of the better sorts. Aside from this place there is a young six acre orchard of Sharpless at La Habra that promises much. The original tree of this variety is one of the largest in California.

On September 17, 1901, in company with the late Dr. A. J. Cook and Samuel Tustin, the writer visited a fruiting avocado on the street corner in Tustin. It was a Mexican variety with globose fruits weighing a quarter pound each. The tree was loaded, and Mr. Tustin told us he sold them at \$3 a dozen. After a lapse of 19 years the tree was again visited and found still to be fruiting, though on a street corner, in the parking and surrounded by concrete, receiving no water except the winter rains.

VIGILANCE WITH GUM DISEASE

By J. E. Calkins

If there is any method by which at reasonable cost gum disease and scaly bark can be kept out of the grove entirely, there is no doubt that it will appeal to the grower who has pride enough in his property to want to be able to say to visitor and to prospective purchaser that he has not a sick tree in his whole acreage. It is practically possible to have such 100 per cent groves, and many more of them than we find today, but it is not possible to have them by the methods that now generally prevail. The present popular method is to wait till a tree shows that it is sick, and then try to cure it. The gum free grove will never be produced along that line, but it can be made by keeping such a watch on every tree in it that any outbreak of gum is caught in its very incipency and effectually disposed of right there. Taken at the start, with only a small show, the disease will almost unfailingly disappear, actually be cured, if the gum pocket is cut out down to the wood and the Bordeaux paste applied. But to be certain of this it is not enough to walk away satisfied after that one treatment. In not less than 30 days that tree should be carefully looked over again, and this time, whether there is further show of the disease or not, the paste should be thoroughly removed with a fine, stiff wire brush till the wood is cleanly exposed, and then another treatment should be given, a few silts with the V knife, and a new coat of fresh, bitev Bordeaux, and so on. The time will soon come when the ugly brown stain will not show through the white of the paste, and then no other outbreaks will follow, but that does not end the need for ceaseless watchfulness.

In fact, to keep free from these diseases the grove should have a careful inspection not less than every 30 days if there is gum in it, and not less than every 50 or 60 days if it appears gum free.

SHIP FRUITS BY PARCEL POST

How to get the best returns for our dried fruit, our nuts, in fact all of our products, and in such a way as to bring greatest return to the producer, is one long question. With the establishment of the parcels post we all hoped for a material aid, but some of us have been disappointed in this possible method. We do not wish to be put in the position, however, of in any way discouraging anyone from using parcel post for marketing farm or orchard products. In fact, we are glad to pass along a suggestion like the following sent in to us by Fred Hohlweg of Fairfax, Marin County. Mr. Hohlweg writes:

"I think it would be good policy for some fruit packers to put up dried

NATIONAL TRACTOR & IMPLEMENT SHOW OF THE WEST

Verdugo Woodlands

(GLENDALE)

Los Angeles, September 20 to 26

A Great Business Show You Cannot Afford to Miss

Displays of the latest, most improved tractors, trucks, implements and power farming machinery of all kinds. Many interesting and valuable accessories. Entertaining features for visitors.

More than 300,000 square feet of exhibits, including 30 or more improved tractors never before exhibited. It will be the first show of national scope ever held on the Pacific Coast. Thousands of visitors are expected.

The National Tractor and Implement Show of the West will be the great market place for buyers of modern power farming equipment. Make your plans now to be there. Enjoy the big show and the unequalled recreational advantages of Los Angeles and vicinity—combine pleasure with business.

Inquiries regarding hotels, rates, etc., gladly answered by the Secretary of the Association.

Free Camping Grounds at Verdugo Woodlands

Under Direction of

Tractor & Implement Dealers Association of Southern California

Guy H. Hall, Mgr.

fruit in packages which could be mailed by parcels post all over the world. Such packages of peaches, apricots, etc., should not weigh over ten pounds, as the usual weight permissible in international traffic is four pounds. Boxes of that weight would be bought by many persons to send to their friends in all corners of the globe and would develop a large trade and reputation for some enterprising firm."

One large establishment took up this matter, advertising largely not only in California but in some Eastern states, shipping assorted packages of prunes, raisins, dried apricots, nuts, practically everything of the more valuable products of California, but the building up of a trade which justifies the keeping up of a stock the year around to meet these orders calls for an immense business. True, the small producer may be materially aided by parcel post in disposing of a few products in nearby sections or even in a few of the Eastern states, through friends or those whose names may be secured. The larger cooperative fruit marketing associations have felt that it was best to deal only with the regular trade. It is hardly possible to follow two methods of marketing without some little conflict, so while this matter has been urged upon the larger corporations it has never yet been taken up in a large way.

NATIONAL TRACTOR AND IMPLEMENT SHOW

All realize that the National Tractor and Implement Show of the West at Verdugo Woodlands, Glendale, near Los Angeles, is to be a business show, conducted in a businesslike way for business men. From September 20 to 26 the beautiful park like setting will embrace an exhibition of tractors, trucks, trailers, in fact almost every type of power machinery used on modern farms, orchards and ranches. It

is safe to predict that, with a very few exceptions, every tractor and implement of well known make will be represented by an exhibit at this show. There will also be several tractors, implements and accessories making their first bow to mark their entrance into the already large field of power farming appliances.

Water pipe lines have been laid, the ground is being cleared, and by the time the show opens the woodlands will present a beautiful appearance. In all there will be 300,000 square feet of exhibition space, which at the present rate of reservation will be entirely occupied. Among some of the classes of exhibits already "lined up" for space at the show are tractors, motor cultivators, tractor and horse drawn implements, threshers, land levelers, motor trucks, pumping plants, farm lighting plants, stationary engines, beltings, lubricating oils, carburetors, magnetos and all other devices and equipment that can be classed as power farming and labor saving machinery. Letters received by the Tractor and Implement Dealers Association of Southern California, under the auspices of which the show will be held, and by Guy H. Hall, manager of the show, indicate that the interest in this great show is widespread. In order that full opportunity may be given visitors to enjoy entertainment in Los Angeles and the resort cities it has been decided to close the show at 6 p. m. daily.

It is apparent that there will be a large attendance from Mexico and Central and South American countries, and buyers are also expected from the Orient, Australia and Hawaii. To persons interested in the development of power farming equipment the show will present an exhibit of the extent to which this important phase of modern industrial and agricultural life has progressed. In anticipation of large numbers of visitors to the show, the

secretary of the Tractor and Implement Dealers Association of Southern California has announced that hotel reservations and information may be obtained by addressing his office.

The Verdugo Woodlands site is easily reached from Los Angeles, being only a few miles from the business center of the city and connected by several of the fine boulevards for which the southern district is justly celebrated. In addition to the excellent motor roads, the Pacific Electric will run trains direct to the gates of the park.

ENTHUSIASTIC GROWERS

If enthusiasm and interest in their work means success the avocado growers of California have a great future. It is only a few years since our first avocado plantings were made, that is, referring to commercial plantings. Almost immediately after these first plantings the growers began to get together and soon had organized the California Avocado Association. This association has been a strong influence, not only for more general planting of this delicious salad fruit, but more intelligent planting, which means service to consumers and service to the industry. The association recently held meeting and exhibit in Los Angeles and new converts were made to the industry. At that time a board of directors was elected to handle details of the business in the interval between meetings. The principal work before this board has been preparation for a great meeting to be held in Santa Ana, October 9.

To the end that this may be a worth while meeting the directorate gathered in monthly session Friday of last week at the home of J. M. Elliott, 914 West 28th Street, Los Angeles. Mr. Elliott's delightful home made a most attractive meeting place and preceding the business session luncheon was served in

which avocado and fruit salads were the feature. Only those who have tasted ripe avocados perfectly prepared know how that taste lingers and calls for more. At the business session the matter of the Santa Ana convention called for discussion of the program and especially of the banquet to be served at that time. It was suggested that a banquet hall should be arranged which would accommodate at least 300 attendants.

GRAPE DAY

A complete and extensive poultry exhibit, an elaborate citrus display which will include a demonstration of packing as done in a modern plant, and many other exhibits of all kinds of agricultural and farm products will be features of Escondido's annual Grape Day festival, held September 9.

Grape Day is Escondido's own celebration. In the height of the grape season she presents to her guests tone of choice, ice cold Muscat grapes. An extensive program of entertainment is offered, starting with a parade a 17, in which all the towns of the county will participate, and ending late at night with a carnival and street dance. Last year over 8,000 people thronged the valley and this year the committee is making preparations for a still larger crowd.

A QUARREL IN BLACK AND WHITE

Two colored men in a quarrel expressed themselves thus:

Rastus: "Look here, you big stick of lieerice, you big ton of coal, you big aee of spades, don't you look at me again."

Mose: "Look here, brother, you ain't no barrel of flour, no bottle of milk, and no snow bank, either."

Azusa, California

FOR SAFETY In Fumigating With Hydrocyanic Acid 'Cool "Gas"' IS ESSENTIAL

Exhaustive tests have been made by the Owl Fumigating Corporation to determine the most efficient, economical, and safest methods of handling, and application of liquid hydrocyanic gas in fumigation.

The result of these tests has proven that

Cool "Gas" Is the Keynote To Economy and Safety

The above illustration is of one of our specially designed Field Coolers. It is a convenient sized barrel with large handles, and equipment for drawing off the hydrocyanic acid. It is constructed with packing after the principle of a refrigerator. A drum of hydrocyanic acid placed in the Field Cooler will maintain its low temperature during use and can be transported with ease. For greater convenience, the Field Cooler is provided with a well-built stand which keeps the Cooler off from the ground and facilitates the drawing of the acid.

If drums of liquid hydrocyanic acid in reserve stock are kept in a "cold house" and placed as needed in the Field Cooler, there will be no danger of expansion and

A Tractor That Will Not Last Will Not Pay

Long life and low upkeep expense are two outstanding features of the Rumely OilPull.

A 30-60 OilPull near Bakersfield, Calif., purchased in 1914, has covered over 10,000 acres in draw-bar work, and has worked in the belt over 300 days. And, up to date, less than \$400 has been expended for repairs. The OilPull is built in four sizes—12-20, 16-30, 20-40 and 30-60 H. P. Send for catalog.

Early Grapes in Imperial

By R. L. Nougaret

Imperial County possesses the unparalleled and much sought advantage of producing early grapes. In fact, some of the earliest in California. Not because some special variety can be grown there better than in other parts of the state, but because varieties of grapes commonly grown elsewhere mature about a month earlier; such is true for the Thompson Seedless and Malaga. In regard to early ripening, its climate does for grapes what it does for other fruits and vegetables. For this reason, if for no other, Imperial as a grape center has a very promising future.

There is, however, a most instructive lesson to be learned, and which deserves being heeded, from the present condition of certain vineyards, the vines of which are going back and which from all appearances will be unprofitable or dead within a short period of time.

Investigation proves almost invariably that this deterioration of vineyards, or spots within them, is due to mineral salts extracted by water of irrigation from lower levels than the depth of a foot or more of surface soil and deposited in accumulating quantities by evaporation in that portion of the soil where the vine has established its root system. The surface of the ground in most cases gives evidence of this action of wa-

ter, for deposits of salts have made their appearance where none or only traces were noted when the vineyard was planted. A proof to substantiate this theory is that the vines were healthy and vigorous during the first years, many of them attaining a good size, and in later years only have shown signs of suffering, decline, and have produced little or no crop. The vines finally die.

The experience of melon growers is well worth considering by the would-be vineyardists when selection of a piece of land is made for a vineyard. Melons are grown these days almost exclusively on ground which has formerly been alfalfa fields. The alfalfa roots remaining in the ground not only have enriched it by the rotting of their organic structure but have also changed the physical nature of the soil and caused it to become more retentive of moisture.

This condition of soil is an exceedingly important factor as well for the vine as for the cantaloupes and melons. There is in connection with this another interesting phase. It is somewhat of an assurance that if during the time the alfalfa field was subjected to irrigation no mineral salts were brought up to the surface, there will be little danger of this occurring when the vineyard will have been growing a number of years and irrigated.

Label Quantity of Fruits and Vegetables

Fruits and vegetables in package form when shipped into interstate commerce should bear a plain and conspicuous statement of the quantity of the contents in each package, according to a statement made by officials of the United States bureau of chemistry, who are charged with the enforcement of the federal food and drugs act. The bulk of the fruits and vegetables now shipped into interstate commerce are marked in accordance with the law. This amendment has been in effect for six years.

Fruits and vegetables in baskets, hampers, drums, cartons, boxes, crates and barrels may in general be marked by either weight or dry measure, or when packed in barrels may be marked in terms of the United States standard barrel and its subdivisions of third, half or three-quarters. Statements of dry measure should be in terms of the United States standard bushel and its customary subdivisions of half bushel, pecks, quarts, pints or half pints. If the quantity of the contents be stated by weight or measure, it should be marked in terms of the largest unit contained in the package,

except that in the case of an article with respect to which there exists a definite trade custom for marking the quantity of the article in terms of fractioned parts of larger units, it may be so marked in accordance with the custom. For example, if the package contains a pound, or pounds, and a fraction of a pound, the contents should be expressed in terms of pounds and fractions thereof, or of pounds and ounces and not merely in ounces, unless there is a definite trade custom to the contrary.

Small Open Containers

Crates or "flats" containing small open containers of apricots, berries, currants, grapes, peaches, plums, prunes, peppers, tomatoes and the like should be marked on the outside of the crate or "flat" with the number of small containers and the quantity of the contents of each. When the crates are so marked it is not necessary to mark the quantity of contents on the small open containers within the crates, but if the quantity of containers is marked on the small open containers the marking must be correct.

Subduing the Wind

By Ernest Branton

SUBJECT that might be profitably discussed at the next meeting of the California Citrus Institute is that of windbreaks, one of vital importance to citrus growers in many sections, as was proven during the high winds of late November last.

Thirty years ago that part of Los Angeles now known as Hollywood was a bare valley, planted only to cereals and known as the "Windy Cahuenga." Strong hot winds came over the stubble fields after harvest, that were very disagreeable and at times destructive. Then came a few eucalypt windbreaks near the coast and a few roads aligned with trees, the latter through the influence of Abbot Kinney, then chairman of the state forestry commission. Beneficial effects were immediately noticed, more windbreaks and orchards were planted and then began the unrivaled upbuilding of that section as a residential suburb. Today the gentle zephyrs wafted over that part of the city constitute its chief charm and lure to the homeseeker.

To go back over the same period of years, there was a vast sandy stretch of 200,000 to 300,000 acres in the western part of San Bernardino County

that presented a great problem in wind control, and one not yet solved in some parts though the proper means are now well known. Well within the center of this section lay the towns of Etiwanda and Rialto and between them in later years the community settlement known as Fontana.

Twelve years ago A. B. Miller of the latter place began planting miles of windbreaks of various kinds and eight years ago installed instruments for recording wind velocity on top of a house 30 feet above the ground. The test of wind at that height records the movements well above the tops of the oldest orchards. An examination of the eight years wind charts was a pleasing revelation to the writer. The lines each year have dropped lower and lower and become more uniform. While formerly they were high and jagged, like the sky line of a many spired iceberg, the one on last year's chart is but a waveling, nearly level, line. Such mastery of the wind the writer has not witnessed elsewhere in California, and in consequence the Fontana-Etiwanda-Rialto section is now a recognized part of the "Land of Heart's Desire," a section of happy home builders in the

C. L. Schufeldt, Mgr., Owensmouth, Cal.

midst of profitable orchards of all the fruits for which California is famous.

The experience of Mr. Miller on the 18,000 acres of Fontana lands cannot fail to be of interest to all in need of windbreaks. The first question arising is what is best to plant. No other tree has rivaled the common blue gum, *Eucalyptus globulus*. Right at this point we see hands raised in despair and hear the wailing cry, "soil robbers." But Mr. Miller has solved the problem. He has a root cutter built like a subsoiler, except that the beak is a large chisel edged tool running two feet into the soil. Drawn by a powerful tractor it cuts 15 miles of roots in a day. Where trees are on roadsides this machine is run on the orchard side only. Between orchards it is run on one side this year and on the other side next year. It is found that 85 per cent of citrus roots are within the top two feet of soil, so the relief is complete within that zone. But 90 per cent of blue gum roots are within the top two feet, at first cutting at least, so the excision of offending roots is still more complete.

Citrus trees planted within 12 feet of gigantic eucalypts were nearly as large and nearly as fruitful as those farther away and the dwarfing effect came before any root cutting was done. Mr. Miller states that before this severe surgery even the fourth row from the windbreak was affected. This is the record of the happy day when eucalypts and fruit trees, like the lion and the lamb, may grow in peace together. Blue gums are planted in double rows but a few feet apart. As they get tall, stilty and spire like, the inside (or either) row is beheaded and becomes bushy below. When these have again grown up the other row is headed back. The manna gum, *E. viminalis*, is second choice with Mr. Miller, and a hardier tree, standing both more heat and more cold without injury. The red gum, *E. rostrata*, grows too singly in trunk and is bare below. *E. tereticornis* is still poorer. *E. rudis*, *E. corynocalyx* (the sugar gum) and other species tried are of little value. On this sandy soil roads running at right angles to windbreaks are planted to black locust, grevilleas, cypress and a variety of trees, but this last year only carob trees, 3,000 of them, were set out. Shade, protection and a crop of beans for stock food is expected from these drouth resistant trees.

PROBLEMS OF THE FUMIGATOR

(Continued from Page 245.)

system for the dose of gas is discharged under the tent; in half a minute or less the tree gets the benefit of the full dose. The gas is hot, rises to top of tent immediately, and as the leakage of the tent is so great that after 30 minutes no great amount of gas is left, my opinion is that after 40 minutes there is not enough gas to do much good. It is safe if tent is dry to go under after half an hour, while with pot it takes 15 minutes to generate, consequently there is never as large a volume of gas and I doubt if one can get as good results.

Some say that they used to get better results with pots in my district. Undoubtedly true; but conditions have changed. Scale is more acclimated or immune and hatch more uneven. Ten years ago uneven hatch was seldom heard of. We are using sodium cyanide now. This takes longer to generate, consequently in a pot results are not as good as if potassium were used.

I want to impress upon the ranchers that it is the quickness of generation with that material that gets the best results. The generation in the cyanofumer with the sodium is quicker than potassium would be in pots. The same is true of liquid. If the liquid is not turned into gas in two minutes results are poor. Consequently heat is necessary. Work with this must be done in the day time or warm nights. The kill was poor in some orchards in certain districts ten years ago at the time when potassium was used with the pots. I know of one ranch that was fumigated twice in one year (about 12 years ago) with potassium cyanide in pots, and when they finished the ranch was still dirty. I do not blame the fumigator who did the work, but the condition of the scale. Cooperation of Ranchers

If we could go in any one district and fumigate as we went, I am sure better results would be secured. If

I fumigate a ten acre ranch today and go back in 30 days and fumigate ten acres west of the piece we had already done, there will be considerable of the scale that has blown, traveled, or got into the other grove in some way; so if every scale had been killed when fumigated, the rancher would still have a dirty grove next season.

There are some reasons why the block system cannot be followed; first, irrigation; second, cover crop; third, condition of scale. One grove might be hatched, the others not. If the block system were followed the cost of drayage would be lessened and the blowing of scale from one orchard to another would be eliminated. The manager would have more time to visit each gang. Some need it and some do not. Sometimes I have one outfit southeast of Pomona, one east of Glendora, some in Charter Oak, Claremont and other places. I have hauled tents eight miles to do a job and then had to return in a few days near to where I started.

Damages to Trees and Fruit

There is never a year goes by without some damage occurring. Our damage last year with hydro-cy was confined chiefly to one 40 acre piece. We started with an 88 per cent schedule, but found after two nights that we were burning fruit, also dropping leaves. Weather was cool but burned fruit at six (in September). The foreman quit at 11 and the last row was

burned badly, as there was some moisture at that time. There were 11 other gangs out that same night, but no damage was done anywhere else. Another foreman was fumigating the adjoining ranch. No damage was done at all. We dropped all the leaves and a few oranges on 20 or 30 trees on another ranch. All had been treated with Creonallum; no fruit was pitted. On another ranch we burned a few oranges in a patch where soil conditions were poor, hardpan underneath. Burned less fruit with hydro-cy than with pots or cyanofumer, and less with cyanofumer than with pots, as there is more acid in pot gas than in cyanofumer gas. I would like to use heavier dosages this year if growers would be willing to pay for more material and stand the loss of some pitted fruit, which is more liable to occur. Sometimes damage is done by carelessness or by the weather being too wet, too cold, too hot, too dry, or too windy, the first two most frequently. Sometimes damage occurs when no one can tell the reason why. Groves in sandy soil, no subsoil, hardpan groves that lack care, water and fertilizer, are the causes of most damage. Diseased trees, especially if Bordeaux has been applied on trunks or limbs, are liable to damage. We have killed several and damaged many others in our ten years of work. Killed ten trees last year with liquid gas by setting drums under trees in shade. This year containers will have to be provided. Have

also killed some by dumping residue from cyanofumer near grove in other seasons. We have had a little damage from application when applied under tree, gas striking body, three or four trees damaged.

Hydro-cy is more dangerous to handle than other means of fumigating, both to men and trees; to men by inhaling, to trees if spilled only, or leaky drums.

Getting Work Done When Growers Want It

This is very difficult. So many want work done before putting in cover crop. Almost impossible to do. Very few want work done after December 1, although some of our best work is done after January 1.

ORNAMENTALS

Trees, Plants, Shrubs direct from nursery to you. For windbreaks, hedges, and beautification. WRITE FOR CATALOG, which illustrates and describes best varieties for California conditions. **LEONARD COATES NURSERY CO.** MORGAN HILL - CALIFORNIA

FAIRBANKS-MORSE "Z" FARM ENGINES

Throttling Governor Gives Steady Speed

Every "Z" Engine is equipped with a sensitive throttling governor. Regulates the amount of fuel and air admitted to cylinder—maintains uniform speed—summer or winter, regardless of work being done.

Throttling governor enables the "Z" to run on kerosene as well as gasoline—saves you money.

Governor is a complete, high grade assembly unit—not a makeshift device. Its case-hardened contact parts resist wear.

The throttling governor has mighty important duties: Helps maintain uniform cylinder temperature—gives smooth, steady flow of power that saves wear and tear on belts and the driven machinery.

Other "Z" features are: Bosch magneto, more than rated power, parts interchangeable; clean cut design; long life.

Go to your nearby dealer today and see the "Z." He will show you why you should have one.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Guavas and Almonds

What should I do to make guava bushes three years old bear fruit? They flower well but no fruits set. Do almond trees bear when only one tree is in the garden?—E. L. S., North Glendale.

Guavas do well throughout the Glendale district and each year we have seen fine crops there and heard no complaints of non-bearing. The writer had 60 guava bushes at North Glendale one year and all bore well. They were irrigated every 15 days. Almonds are shy bearers except in favorable sections and under favorable conditions. Nearly all varieties are self-sterile or bear very little if of one variety, no matter how many trees are present. Almonds do best in light, loose soil. They need some irrigation in summer, but if drainage is not good heavy irrigations are fatal. Yours is not a good section for almonds.—E. B.

Granite Bedrock at Escondido

Is granite bedrock around Escondido?—Subscriber, Escondido.

"Water Supply Paper 446 of the U. S. Geological Survey" gives answer to this question as follows: "The formation that lies at the surface over the greater part of the Escondido basin is residuum popularly known as decomposed granite. It extends to depths of from 40 to 100 feet and is underlain by solid granite. We may add that the geological survey, or, rather, the "Superintendent of Documents, Government Printing Office, Washington, D. C.", will supply at one dollar per copy above referred to publication and accompanying maps.

Oleander Poisonous

Would like to know if the flower of the oleander is poisonous to the human being.—Subscriber, Ventura.

We have no definite statement as to the flower being poisonous, but presumably it is. Leaf and branch have been known to cause death and that all too often. Arizona has made investigation as to effect of oleander poisoning on livestock. In one case 25 grams of green oleander leaves were given to a horse in capsules. The following morning the animal was dead. Another case is mentioned where a soldier used an oleander branch freed of its bark as a skewer. Twelve soldiers ate of the meat and seven died. The only official document we have touching upon oleander poisoning is the bulletin from which these facts are taken, No. 59 of the University of Arizona experiment station, "Oleander Poisoning of Livestock." It was published in 1909.

Fence Laws

Some time ago I saw an article—think it was in the Cultivator—where it said that the fence laws had been set aside and that there was a commission to draw up new laws to be presented for passage next session. If such was the case would like to know what issue that was in. Would also like the names and addresses of the commission.—Subscriber, Galt.

Subscribers often wish information as to the fence laws of California. At present they are in such a muddle that it is impossible to give very definite information. The supreme court some months ago set aside the law which was acceptable to the livestock people. We believe the whole matter has now been taken up by the agricultural legislative committee, a committee of representatives of various livestock, fruit growers and farmers organizations. This committee has as secretary and executive officer R. N. Wilson, with offices at 312 Ochsner Building, Sacramento.

Measuring Hay in Stack

In your issue of July 31 you give two rules for measuring hay in stack. Rule 1, as you say, is accurate for small squat stacks, but for some reason that I have not discovered is away off on big stacks. The so-called government rule is not accurate, so far as I can discover in any case. I submit herewith a rule that I have always

used and found accurate under all circumstances.

From the "over" subtract the width and divide the remainder by two, which will give the height that the stack would be were it flattened down so as to be shaped like a brick. This is always true, no matter how tall the stack nor how wide. Having ascertained the height, width and length of the stack, it only remains to multiply together the three dimensions and divide by the number of cubic feet in a ton.

For example: Suppose you have a stack 20 feet wide, 60 feet over and 50 feet long. 60—20 equals 40 divided by 2 equals 20.

You have now a stack shaped like a brick. Multiplying its dimensions, we have 20x20x50 equals 20,000 cubic feet; 20,000 divided by 512 equals 39.14 tons.—Henry Nelson, Chico.

TO TRY MARKETING CATTLE AT AUCTION

One of the most important undertakings in the recent history of the California cattle industry will be inaugurated on September 1, when the farm bureau of Nevada County, acting in cooperation with the California Cattlemen's Association, will hold an auction sale of prime cattle at the Lime Kiln Ranch near Grass Valley. This will be followed on September 4 by a similar auction sale of prime cattle at Big Meadows near Chester, in Plumas County.

For months cattlemen up and down the state have discussed these auction sales as one means of stabilizing market conditions, especially for the small producer. It has been stated repeatedly by prominent cattlemen that with proper cooperation from the buyers these auction sales would give the small producer a chance to get prevailing market prices for his cattle instead of being compelled to dispose of his entire herd at feeder rates to some buyer who made a practice of meeting the cattlemen as they were coming out of the national forest. It has been alleged that such buyers were in the habit of quoting feeder prices for an entire herd, and then grading the cattle and selling off the prime steers at a heavy profit, while the real feeders in the herd would be sold for at least as much as the buyer had paid.

Under the system of auction sales a cattleman can have his herd graded by an impartial expert, and the prime cattle will then be sold as such. This should give the cattleman a reasonable margin on his fat stock, while the feeder will still be marketable for as much as could be got from the type of buyer that has in the past absorbed these small herds.

President F. H. Bixby of the California Cattlemen's Association and several of the directors will attend these sales. All of the packers have been requested to send buyers and the outcome will be watched with great interest by cattlemen.

Cattlemen Plan Important October Meeting

THE California Cattlemen's Association has taken the initiative in a movement of vital interest to stock producers throughout the Western states. A letter has been sent by Secretary David J. Stollery to officers of cattlemen's associations in Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Texas, Washington, Wyoming and Utah, proposing a conference of delegates from all the associations and suggesting that this conference be held in Salt Lake City on October 28, 29 and 30. The letter, after naming the states, says in part:

"The above named, while representing in number one-fourth of the states, run nearly one-third of the cattle of the country, although in population they comprise but about one-tenth of the inhabitants of the United States. Their contribution, therefore, to the nation's food supply is tremendously in excess of their own requirements.

"Each season there is a scurry to the Eastern and Middle Western markets of surplus cattle, and until now no concerted effort has been made to gauge the demand and furnish the supply to more nearly accord with it. It is this thought which prompts the suggestion by the California Cattlemen's Association that a conference of all of the officers of the cattlemen's associations of the 12 states mentioned be called within the near future to give consideration to and, if deemed practical, act upon the following suggestions:

"A plan of action whereby a seasonal surplus supply of cattle from the various states can be gauged.

"The preparation of a schedule by which a more steady supply of cattle would enter the various Eastern and Middle Western markets.

"National legislative matters pertaining particularly to federal financial aid.

"Enactment of state or federal legislation toward the eradication of tuberculosis in range cattle and the elimination of tubercular cattle entering our markets.

"Action tending to withhold from prime cattle markets half fat cattle and feeders.

"Prevention of gutting other states with feeders.

"A closer cooperation between the state associations with respect to feed and other conditions.

"Effort to reestablish the branch offices of the U. S. bureau of markets.

"Policy of a campaign having as its object stimulation of beef consumption."

It has been realized by cattlemen that no one state could solve its local problem without the cooperation of other states whose cattle came into competition. For instance, Nevada, Utah and Arizona cattle have an important influence on the California market. California cattle have influenced the Portland market by a number of shipments this season. California cattle have come into competition with other states at Omaha, Kansas City and even Chicago. Out of this conference it is hoped will come a definite program whereby each state can dispose of its surplus cattle at reasonable prices without injuring the market for other states. Marketing

unquestionably will be the most important subject considered by the conference.

DUROC BREEDERS APPOINT FIELD MAN

At a recent meeting of the directors of the California Duroc-Jersey Breeders Association an important step in the promotion of that breed was made with the appointment of Dr. L. J. Anderson as field man for the association.

Dr. Anderson has been teaching agriculture in the high schools of Eldorado County for the last three years and his success in establishing pig clubs has been of such high order that his work attracted wide attention. Anderson was largely responsible for the selection of the Duroc breed for most of the pig clubs.

The association expects its new field man to spend all of his time in the field in constructive effort to widen the popularity of the breed he represents. His services will be at the disposal of all breeders and farmers and ranchers who are interested in Durocs. He will also assist in the organization of pig clubs, local associations and sales. Anderson has started his new work by mapping out a program for greatly enlarging the membership of the state association.

LOS ANGELES LIVESTOCK SHOW

Manager Thomas is making every effort to bring off one of the greatest events of the Pacific Coast to be held in Los Angeles, October 2-10. Every feature of the livestock industry is under consideration and every breed is making effort to do itself proud. Angora goats have received an especially strong boost because of exhibits from

one of Texas' largest ranches. The owner, who has a nation wide reputation, is now in Los Angeles making preliminary preparations. Manager Thomas says:

"Our show is no longer a local affair; it is being supported by breeders all over the United States who are looking toward California as the ideal place in which to operate. Several entries from North Carolina and Illinois are promised. Requests for space are pouring in so fast that I would urge upon all exhibitors to enter early, by September 5 at latest, so that we may arrange our building program to provide suitable display space for everyone."

NUMBER OF FARMS IN CALIFORNIA

(Continued from Cover.)

matter of increase, however, is the Colorado desert, Imperial County. In 1900 the inhabitants consisted of a few engineers, a few mule drivers and their teams. In 1910 Brawley showed a population of 881. The next ten years showed an increase of 512 per cent, or a total of 5,392. Calexico in 1910 had 797 which was increased to 6,332 in 1920, or a total increase of 680.8 per cent. As yet we believe the returns have shown no town with so great a percentage of increase. There are no towns more typically agricultural than are these in Imperial Valley.

EVIDENTLY NOT

Bess: "Somebody passed a counterfeit dime on Bob a year ago and he hasn't been able to get rid of it since."

		Pretty Lassie No. 160150.	Star Grove 17 26590 Pretty Face 5735

Note his ancestry—he has every right to be a good one. Sired by Standard, who stood second at the International Livestock Show at Chicago 1912, he by Bonnie Brae 8th, Sr. Champ. at International 1908. Dam Disturber's Lassie 4th by Disturber. Second dam by Prime Lad, and one of the best producers of the Great Disturber family, being dam of the \$35,000.00 Repeater's Model and is still producing high quality calves in the Col. Taylor herd of Kentucky. We value him very highly as a good, consistent sire. Our entire show herd of the last two years were sired by him and in the "Get of sire" class he has been undefeated. He is a big rugged fellow, showing excellent Hereford character, with extra heavy bone and is absolutely one of the easiest keepers we have ever owned or seen.

We have used him too heavily to make a great show record, but the one time he was shown as junior yearling, 1914, he made a most creditable showing. He won 3rd Iowa State Fair, 2nd at Nebraska State Fair, 2nd at South Dakota State Fair, 2nd at Interstate Fair, Sioux City, Iowa, and 4th at Missouri State Fair. There was no show at Kansas City or Chicago that year.

A few of those Harris Standard 2nd heifers bred to Beau Blanchard 76th would make a valuable addition to your herd or will start you in the Hereford business right.

Write for particulars about our sale cattle and cattle we are offering here at the ranch. See Beau Blanchard 76th and our show herd at The State Fair, Sacramento, Sept. 4 to 12.

Otis Cordell, Herdsman

McCarty --- Shinn --- Elliott

50 Strictly Big Type Poland Bred Sows---Gilts---Boars

Tulare, Cal.

September 27

A Statement of Facts

There is slight question but that the forthcoming sale of selected tops from the herds of Hugh Shinn, A. D. McCarty and A. J. Elliott will constitute the most desirable offering of modern Poland Chinas yet to be offered in the West. The offering is especially attractive to the breeder and the farmer. The blood lines represent most of the popular lines and individually the offering is of a character that will prove a surprise to all. They have been exceptionally well grown and properly developed. The offering is sired by such noted boars as The Pilot, Kansas King, King Jones Over, The Californian, Hercules and others. Those bred will carry the service of The Westerner, The Californian, Hercules Jr., The Argonaut and Orange Giant.

Californians can look forward to this sale with complete assurance that there is no need to go East for breeding stock. Farmers and ranchers will make no mistake in adding a few such animals to their herds. They are the kind that make a profit year in and year out. That 1920 will be a profitable year for pork producers is generally conceded. Now is the time to get ready.

Watch the Cultivator for further details.

Merced, Cal.

130 CALIFORNIA BOYS ATTEND OREGON AGRICULTURAL COLLEGE

(Continued from Page 245.)

The instances above are the only two concrete examples of the difference, if any, which may exist between the two colleges. Personally, I would much prefer to attend the University of California in order to get acquainted with the people of my own state and the particular problems and conditions thereof.

As to the greatest weakness of the college of agriculture, I would not attempt to point it out, never having attended there. However, I might say that at the Oregon agricultural college the practical and theoretical work is well linked up together. The barns and fields are adjacent to the college campus—not far away in another county.

Also, the professors of the college are in close connection with the farmers in all parts of the state, helping to solve their fertilizer problems, laying out their drainage systems, organizing cooperative associations for various purposes and looking into diseases of crops or stock.

I hope this letter will not be received as destructive criticism, but as a friendly suggestion.

Charles Hartmann Jr., Hollister

Look these points over and reason it out for yourself. You may find some truth in the following:

O. A. C. ranks very high as an agricultural college because of the courses it offers, the excellent way they put things over, individual instruction, and becoming personally acquainted with your instructors, who are always glad to have you call and straighten out your difficulties. They couple their theory and practical work so the student can grasp things easily. The student body itself is superb, and everywhere you hear the familiar "Hello," the sound of democracy.

At U. C. the classes are generally so large that the instructor has not the time to reach the students with personal instruction or individual attention.

The enrollment is so large that little is cared whether you stay in college or not. Some students do not grasp things readily and are slow to get on to college teaching. If they "stick" they have a hard pull. These two points offer no encouragement to the students. All students don't go to school under the same conditions. Since wages are high, we do not find so many going to college. With one try their opportunity to get a college education is lost.

There is the disadvantage of having to go to Davis to get your practical work after you get your theory at Berkeley. This in itself is a disadvantage and self explanatory.

R. A. B., Red Bluff

I will frankly tell you that the cost of attending the California institution is \$400 to \$500 a year more than the Oregon institution. The Oregon institution also, I believe to be a very practical institution. It is not a book school alone; they give the practical work along with the books. It also I believe to be a very democratic institution and better for a poor person to attend.

A. L. O., Taft

My principal reason for attending the Oregon institution is based upon financial obligations. In Oregon the simplicity of customs, splendid opportunities, clean environment, wonderful spirit of democracy and respect for the self supporting tend to encourage the ambitious student who must make his own way through college.

The O. A. C. spirit has won this native Californian away from his home institution.

A. F. Gillette, La Verne

I selected the Oregon agricultural college, as one gets the practical work from the very start in conjunction with the other studies, while at the University of California, where the university and the farm school are separated, most of the work is done at Berkeley and only a portion of the latter two years is devoted to the practical work at the Davis farm. In this way the knowledge gained from the text is not practiced at the time it is studied and thus seems separate, making less impression.

Due to the crowded condition at the

U. of C., one does not get as much personal attention and hardly gets to know the other students outside of his own little circle as he would in the smaller school.

The higher school fees and higher living expenses, due to higher rental and more elaborate style of dressing, makes it more expensive to attend the U. of C. It is also more difficult to obtain work on the side to help pay one's way through.

As the University of California is also so near a large city, there are bound to be the outside attractions to interfere with the school work.

On the other hand, since California pays her instructors better than most states, she is gradually drawing the better men. The other states are finally realizing this and raising their salaries, as in Oregon, through the passage of the mileage tax.

In my case, where I am majoring in horticulture and expect to specialize in citriculture, which I have always followed, a degree from the U. of C. would be a greater recommendation than one from O. A. C., and as long as it is our own state school that we have to help support, I would greatly prefer to attend the U. of C. if the conditions were right.

M. G. Haynes, Corona

I have no fault to find with the courses offered at California, nor with the manner of instruction. I went to the Oregon institution because it cost less, even with the additional railroad fare, and because the Oregon school is more democratic in its campus life than is California. It makes no difference whether a man has an allowance of a hundred dollars a month or nothing, at Oregon, and it certainly does at California. A man working his way through college at Oregon rates as high as anyone else, while at California he is more or less looked down on.

Although I am a member of a national fraternity with a chapter at California, I think that the fraternity proposition can be overdone, and that it is overdone at California.

I cannot overemphasize the matter of cost. It costs too much to hold up your end at California, socially and in many other ways. There are many students attending Oregon at the present time who have been to California for a year or two, and they all have the same cry—"It is too expensive."

Howard Draper, Highland

I believe O. A. C. to be the more practical, not given to research work as much as U. C. having the college farms convenient so that the practical and theoretical may be taught hand in hand.

O. A. C. is a smaller college, hence it follows we have smaller classes and receive more personal attention from instructors. I also believe, because of the large number attending Berkeley, one loses much in personal association.

The cost of living is another item. I understand that \$50 at Berkeley covers mere living expenses, while it costs us \$35. As other expenses are proportional, this is of considerable importance.

BETTER BULLS—AT LESS COST

"All farmers use improved machinery today, but too many dairymen do not use improved, efficient dairy cows, the most wonderful of all farm machines. Why use a grain cradle or milk a scrub cow in these days? Neither is businesslike nor profitable," says Geo. S. Bulkley.

"Really good cows are hard to buy and very high priced. The good dairyman takes no chances of buying in cull cows and abortion, but keeps improving his own herd with good bulls. He makes his herd more profitable every year, and occasional surplus stock brings good money from less businesslike neighbors.

"In 1907 the Iowa experiment station bought several native scrub cows in Arkansas, whose average production was only 3,660 pounds milk. Heifers from these scrubs by pure bred bulls averaged 5,990 pounds milk—a 64 per cent increase. Breeding these heifers to other pure bred bulls gave granddaughters of the old scrubs averaging 8,401 pounds milk, or 2 1/3 times as much. Many dairymen have secured like improvement and others should follow their example.

"We advocate the cooperative bull club because it is the most economical and practical method (especially

among smaller herds) of securing the use of high class bulls. It is not a half baked theory but a successful practice since 1874, originating in Denmark. It is also the established practice in Norway, Sweden, Holland and Switzerland; nearly 100 clubs are working in the United States, some since 1908. The writer's experience of over five years with bull clubs in Pennsylvania, where 89 bulls, costing from \$250 to \$2,400 apiece, are now serving the needs of over 400 farmers with complete success, convinces him that this idea has great value.

"This is the plan: One, two or a dozen farmers, living close together, owning a total of 40 to 80 cows, combine to purchase one very high class sire for use on all their cows, instead of each owning and feeding a common bull or a scrub. This group or block forms an association with other blocks, three to five blocks forming a bull club. This club buys one bull for each block, each member paying a share in proportion to the size of his herd; then every two years the bulls are rotated or exchanged. Thus each man's original share of part of the cost of one bull gives him the full use of very good bulls for six to ten years without reinvestment.

"In each block the bull is stationed on one central farm where the other cows are brought for service, the members sharing the cost of his feed. To prevent spreading disease he must be kept separate from the regular herd and disinfected at every service, a cheap and safe precaution. If a member's herd breaks out with abortion he cannot use the community bull for two or three years, until it is cleaned up. Where these rules are followed abortion has not and will not be spread by the bull. Ask your veterinarian.

"Where dairymen share in the purchase and feed of one bull, and continue to exchange instead of buying new bulls, they can use these valuable bulls at less actual cost than common or scrub bulls owned alone. Often a man's scrub bull sold for beef will pay his share in a club to last six to eight years. Besides this, the club gives a chance to test out the bulls, and to use the best tested sires as long as they live establishes one breed in a community, encourages members to study breeding and better methods, to combine to eliminate disease and to form breeders associations for buying, selling and advertising their stock.

"Your county agent, agricultural college and United States department of agriculture experts are available and anxious to assist you in organizing a bull club. We realize that the club idea is not suited to every farm or locality, but if you think there is opportunity for one block in your neighborhood, see your county agent or farm bureau officers about it and they will be glad to locate other blocks, help you to organize and select your bulls and to make it a real success. They can suggest to you constitution and by-laws to cover all details of management. It is understood that the dairymen in the club handle their own business by electing officers and one director for each block, whose duty it is to see that the rules are strictly carried out.

"If you want a more profitable dairy herd, consider this idea and try to make your community lead the county in this progressive movement."

DELIVER THE GOODS CLEAN

Of all the mediums of good sound advertising in the dairy industry there is not one which can excel that of "quality."

When we observe the methods of those who have really achieved in the dairy business we will find in every instance that success was made possible through the application of common sense rules of cleanliness and sanitation.

Clean wholesome dairy products are the best advertisements, and any infraction of these axiomatic first principles will work to the dairyman's disadvantage and render it difficult to repair the damage wrought.

Dairymen are, as a rule, in the business to make a success of it, and there is no single factor that will promote business faster than the production of a clean wholesome product.

Stanislaus Holsteins Average \$380 at Patterson Fair

The sale of Holsteins held at the Patterson fair, August 21, under the auspices of the Stanislaus County Holstein Breeders Association, resulted in the very satisfactory average of \$380. The sale consisted of the selected tops from a number of the leading herds in that county. The cattle were all entered in the regular classes and the sale held after the animals had been passed on by the judge.

The top of the sale was reached with the attractive heifer, Rag Apple Prilly Alcartra, from the Bridgford Company's herd, that went to Joe Ruddy of Modesto for \$875. The second highest priced female was the six year old cow, Mechtilde Ormsby 2d, consigned by R. L. Holmes and purchased by Mrs. B. F. Fox of Modesto for \$800. Princess Cornucopia Prilly, consigned by Bridgford, fell to the bid of Azeveda Bros. of Patterson for \$790. Ella Josephine Skylark Countess topped the consignment of A. M. Bibens at \$560. Erma Wietske Maid was the top of the Cornwell lot, going to H. A. Steimerjohan for \$385. Irene Beauty, a six year old cow, with 603 pounds of butter in nine months as a four year old, led the Peterposten consignment and was taken by

HOW THEY GOT BY

"It's a mighty good thing," said Uncle Eben, "at de Ten Commandments was handed down direct, instead of bein' 'bliged to go through de hands of a lot of committees."—Washington Star.

How a Purebred Holstein Bull Will Make Money for You

The Iowa Experiment Station recently conducted an experiment under the direction of Prof. L. S. Gillette. A purebred Holstein bull was mated to scrub cows and the resulting heifers were bred to another purebred Holstein bull.

Here's what happened—Dams average yield, 3255 lbs. of milk, 161 lbs. of fat.

Daughters average yield, 6313 lbs. of milk, 261 lbs. of fat.

Granddaughters average yield, 11,295 lbs. of milk, 431 lbs. of fat.

In other words, the daughters of the purebred Holstein bull averaged:

94% MORE MILK

62% MORE FAT

than their dams, and his granddaughters averaged

245% MORE MILK

163% MORE FAT

than the original scrub dams.

The short cut to greater dairy profits is a purebred Holstein bull.

Think it over!

OLD ROMAN PIT SILO

Everyone would select the superior article if he would only compare it with the inferior one. That is why we really want you to compare the PAPEC with other ensilage cutters.

Did Horatius Own a Silo?

Every schoolboy knows the story of Horatius, the brave Roman, who, single-handed, held the Tiber bridge against an entire army, and so saved the city of Rome. As a reward for his courage, Horatius was given a large farm. No doubt, he built a silo as many other Roman farmers had done.

The old Roman pit silo, inefficient and crude, was nevertheless a means of preserving feed. Modern science has greatly improved upon the idea, and has dictated the following requirements for the perfect silo:

It must be air tight. The walls should be round, smooth and perpendicular in order that the silage may settle evenly without forming air pockets. The entire structure must be strong enough to resist pressure from within and high winds.

The Simplex Silo is air tight because there are no end-joints to leak air. The one-piece staves of Clear Oregon Pine (a wood noted for its smoothness) make an ideal inner wall, proof against air pockets and honey combing.

The Crissell Tangent Top keeps the Simplex always in a true circle. The steel hoops prevent damage from inside pressure. The Patented Interlocking Anchorage System binds the Simplex to its base so rigidly that nothing short of a cyclone can move it.

Because it complies with all of these requirements instead of only a few of them, agricultural experts have pronounced the Simplex "scientifically correct." Ask yourself the question—"Why should I own any other kind?" Then answer it.

Anchorage Farm

Orland, California

extends a most cordial invitation to all who attend the California State Fair, and who are interested in better hogs, to visit our exhibit of

BERKSHIRES

This is our first exhibit at Sacramento though we have been engaged in breeding Berkshires for the last four years. Our showing will consist largely of the blood of the noted STAR LEADER, junior and reserve grand champion at the P. P. I. E., that heads our herd. We will also exhibit our junior herd boar, NATOMAS BARON DUKE, grand champion at the 1919 California state fair and at the California International Livestock Show.

We are especially anxious to meet our many customers and we will be glad to advise with them on any problem of breeding, feeding or management.

May we not look forward to the pleasure of meeting you at our booth?

Italian Vineyard Company

Guasti Berkshires

Weaned pigs, both sexes, from sows that farrow large litters and raise them. Priced at a figure any farmer can afford and that will show him a profit.

BIG PUBLIC SALE OF BERKSHIRE SOWS AUGUST 14TH

Alex. Wilson, Supt., Guasti, Cal.

Our age boar Royal Longfellow 5th is just about as good a boar as any at the age of five years. He is a sire, too. Not many stand on four good feet with the large bone, and length and smoothness he has at the age of five years.

It will pay you to pay us a visit. Reasonably priced stock for sale.

Livestock Insurance

The fall fair and exhibition season is at hand. THE HARTFORD LIVE STOCK INSURANCE COMPANY will insure your show stock (horses, mules, jacks, cattle, registered milch goats, and registered swine) against death from any cause, while at home or on the road, including the hazards of transportation. Policies broad and liberal; rates reasonable—yet adequate to insure prompt settlement of claims. Before shipping see the Hartford Agent in your town or address

Rising Demand for Horses and Mules on Big Markets

In spite of unfavorable business conditions during the spring months and the fact that building has been very largely at a standstill this season, demand for horses and mules has shown a substantial increase over the first six months of 1919, reports the Horse Association of America. This indicates that business men in the cities have been studying costs of transportation and are increasing purchases of horses and mules which are decidedly the most economical on all short haul heavy traffic and on frequent stop routes, regardless of length. This increase in demand is not a matter of estimate or guesswork. The actual records from the large markets show increases in horses and mules handled during the first six months of 1920 over the first six months of 1919 as follows: Fiss, Doerr & Carroll Co., New York, 4,445 head; Union Stock Yards, Omaha, 5,011 head; Grand Island, Nebraska, Horse Market, 1,451; East St. Louis National Stock Yards Horse and Mule Market, 3,765; Union Stock Yards Horse Market, Chicago, 3,863; Kansas City Stock Yards Horse and Mule Market, 15,482; making a total net gain on the six markets of 34,017.

Farmers may well give heed to these figures. With the increasing demand for horses and mules, and with the greatest shortage of foals and year-

lings in proportion to total horses in existence that has ever been known, there can be but one outcome. Good horses and mules are certain to increase in value, and men who expect to purchase farm work horses will soon wish they had bred their own replacements.

The most serious factor in the present situation is shortage of good stallions. There is a good supply of jacks, but nearly every community reports a lack of suitable stallions for breeding purposes, and dealers who have been replenishing their supply of stallions with a view to being prepared for next winter's trade report great difficulty in finding two and three year old colts of the conformation and size demanded by the trade.

Men having mature draft horses seven or eight years old will do well to dispose of them before depreciation becomes marked, and can well afford to put in good young mares standing 16 hands in height and weighing 1,200 or 1,300 pounds at three or four years of age. Such mares carry two or three crosses of draft blood and grown out under proper conditions will mature into excellent work mares weighing 1,500 or 1,600 pounds, good for work and breeding.

This is a good time for a man to buy young mares of this kind with a view of disposing of his good mature animals later in the season.

Paraffin Protects Silo Interiors

An experienced stockman reported to the United States department of agriculture that five years ago he coated the interior of his concrete silo with paraffin and that this material has efficiently protected the silo ever since, with indications that the protective covering will be good for several years more. This stockman used 40 pounds of melted paraffin in painting the interior of his 110 ton silo. The paraffin was applied hot with a large paint brush. Care should be taken to avoid splashing, since hot paraffin causes severe burns on bare flesh.

This man eliminated the need for scaffolding or ladders by applying the paraffin as the silo was filled, painting a strip as high as he could reach all around the silo and then waiting until the silo had filled up sufficiently so a strip of corresponding size could be applied higher up. He reports that on

thorough examination during subsequent years the only noticeable damage to the paraffin protection occurred where the tines of a pitchfork had scratched the surface. Otherwise the covering remained practically intact. A protective coating is particularly desirable for use in silos made of solid concrete, concrete blocks or similar building material of a semiporous character likely to be attacked by silage juices. The smooth paraffin coating also is believed to permit the silage to settle easily and uniformly, thus avoiding air pockets. Painting the interior of the wooden silo with a mixture of coal tar and creosote protects the building against decay and increases its working life several years where the application is repeated every year. The material costs about 20 cents a gallon and approximately three or four gallons are sufficient for a 100 ton silo.

It Pays to Test Dairy Cows

"The man who persists in milking low grade and scrub cows just because he thinks they require less feed and attention is not only fooling himself but is actually robbing his own pocketbook," says E. M. Harmon of the Missouri college of agriculture. "Through our cow testing associations we are constantly finding that it is the high grade and pure bred dairy cows of high producing ability that are making the real profits on the dairy farms of Missouri.

"In the Cape Girardeau County Cow Testing Association, which recently completed a year's work, we found that after charging the cows with all feed consumed and allowing the nominal sum of \$60 a year per cow for all other expenses, such as labor, interest and veterinary fees, that they were divided according to profit as follows:

	Percent	
Lbs. Fat.	Cows in Class.	Profit.
350 to 450.	4	\$111.10
250 to 350	41	54.24
150 to 250	41	1.72
50 to 150	14	Loss 35.26

"From this data we will see that one of the 400 pound cows will produce as much clear profit as 64 cows in the 200 pound class. A further analysis shows that there were enough actual money losers in the 200 pound

class to make a total of 36 per cent of the cows below the line of profit. It is the dairyman who is getting rid of these money losers who is making the real profits out of dairying. The cow testing association is the surest method of building a profitable herd."

Veterinary

Horse Has Sore Feet

Have a horse with sore feet. Looks like frog was rotting away and there is a slight discharge. Have been cleaning out thoroughly and applying blue vitriol water. There has been very little improvement. Can you tell me what it is and what should be done?—Subscriber, El Cajon.

The condition mentioned appears to be thrush. You should clean out the feet thoroughly, cutting away all of the decomposed hoof necessary and pack powdered calomel in the cracks around the frog of the foot very tightly. Care should be taken to keep the horse standing in a dry place following this treatment. It may be necessary to pack the hoof two or three times if the condition is as bad as it appears to be from your explanation. Careful treatment of this kind should remedy the difficulty in a short time.—G. E. G.

Eggs and Walnuts

By Jean A. Koethen

MORE and more the thoughts of California fruit and nut ranchers are turning to the problem of renewing the soil. How shall necessary fertility be maintained without profit stealing outlay for manures of one sort or another? Mrs. John C. Eads of San Gabriel is one of those who believes the combination of poultry and trees is the solution.

When Mr. and Mrs. Eads found that their 25 acre walnut and orange grove ten miles out of San Gabriel needed more fertilizer than they cared to buy, Mrs. Eads said, "Let us try chickens." Mr. Eads was skeptical. Chickens are a lot of work and they must be fed. Besides, the family were living in town and there wasn't much room for chickens on a back lot. He consented, however, to loan Mrs. Eads the money for buying an adjoining lot and making a try of it.

Chickens on a Back Lot

This lot, 67 by 150, was laid out with great care in order to economize space: Brooder house of the 100 chick unit type, heated by gas pipes that come up from underneath at one end of each hover, every run with its outside run to match; long laying house of the no-yard type, confining the hens in units of 75 to 100; cockerel houses of the open front colony sort that can be transformed into laying houses for small flocks of pullets if desired; neat alleys connecting all buildings; feed and egg room and, best of all, what Mrs. Eads calls her experiment station, a row of small yards where small groups of birds can be kept for observation and experiment. All was not built at once, but it was planned from the beginning and built as occasion required.

All this was five years ago. April 1, 1914, Mrs. Eads bought 500 chicks in two lots of 150 each. The 300 pullets she raised were trapnested to make sure of finding the right foundation stock. Later some new stock was bought from the Oregon station, and there is now in one of the cockerel yards a fine flock of what its owner proudly calls Dryden roosters bred from the original Dryden stock.

By the first of January, 1915, these 300 trapnested pullets had paid back all they cost. The next year was not quite so successful, because Mrs. Eads tried to increase her flock too rapidly. At the end of that year she had \$236 over and above expenses but had not yet paid back to her husband the cost of the buildings. The third year she bought an incubator and did her own hatching, but bought Dryden males to mate to her hens. By the end of the third year she had paid back the cost of the buildings, and at the end of the fourth year she made \$1,450 clear profit from this back yard plant. "Then," she says, "Mr. Eads, who had all along been doubtful of the outcome, decided to get on the band wagon, and we went into partnership." "I often tell people," Mrs. Eads added, "that if I had been absolutely dependent for my bread and butter on the outcome of my venture I should have quit at the end of the second year. There were other things I could have done more easily to earn a living. But a living was not what I was after. I wanted to breed up a productive strain of layers for that walnut ranch. If we must support our hens just for the sake of the manure they produce, we might as well buy the manure. If the hens will pay for themselves and bring in an income beside they are very much worth while."

A Walnut Grove House

The breeding stock, comprising over 300 hens and cockerels, is still housed on the town lot where Mrs. Eads may trapnest and experiment and keep close watch over her birds, which are now the apple of her eye, but the 1,200 layers have been moved to the new Weeks type house on the ranch.

Picture to yourself a long house 240 feet long and 12 feet deep, divided into sections ten feet wide, with a big patch of alfalfa in front of it, and all around magnificent walnut trees, and you will have some idea of the home of these fortunate layers.

This house differs in several important particulars from the regular

Weeks house. In the first place the sections are larger. The Weeks house is built in sections 8 by 8, each holding not over 25 hens. The Eads house is in sections 10 by 12, each holding 50 hens. The Weeks house is entirely open in front and entirely closed at the rear, except for windows. The Eads house has wire over nearly all the front and also at the back under the dropping boards, which are built quite high. As it is shaded on the east by a row of walnut trees, the hens are cool and comfortable on the 'hot-test day, and if there is ever a draft it is below the boards. There is no floor, except the soil of the orchard, which is very sandy. The droppings are raked off when necessary, and once a year, if it proves essential to the health of the birds, the old sand will be removed. In order to test the healthfulness of such housing a careful record is kept of the sick or dead birds taken from each house. The layers here are in charge of Mrs. Macdonald, wife of the manager of the ranch. Mrs. Eads makes weekly trips to see how things are going, besides looking after her end of the work on the home plant.

Experimenting

There are some things nobody seems quite sure about, and so Mrs. Eads in her experiment station is trying to find out for herself. Do hens go broody because they are lazy or because they are tired? In one of these little yards are eight or ten hens that have been banded for broodiness. Will they go right back to laying as soon as they have rested a few days or will they rest too long? In another yard are May pullets. Will they lay as many eggs as pullets hatched in April? Apparently not, but Mrs. Eads wants to be sure before she gives up May hatching. In another yard are pullets that did not begin to lay till they were nine months old. They have laid more steadily than the more precocious pullets since they got started. In two adjoining yards are pullets that had no wheat while they were growing and pullets that had all they would eat. Without question, the wheat fed pullets are larger and lay earlier.

Then there is the "perfect" pen, 13 old hens, daughters of a Dryden cock. Their production since last March (to July 9) was 69 to 80 per cent. If some hens do as well as this, should not all hens be required to do it or quit?

Bookkeeping First

The most essential thing to success with poultry, Mrs. Eads declares, is to be a good bookkeeper. She loves to keep accounts and takes the greatest pleasure making the balance come in the right column. Another important factor in success is buying feed economically, that is, in quantities and at the right time. Haphazard buying and haphazard management must be carefully guarded against.

EGG LAYING CONTEST AT STATE FAIR

A feature of the Santa Cruz County exhibit at the state fair will be an egg laying contest exactly as conducted by the farm bureau at Santa Cruz. This institution has become of more than state wide interest and bids fair to soon become a national contest.

The egg laying contests bear the same relation to the poultry world that cow testing associations do to the dairy world. By a system of daily rattons, tests and the keeping of daily records, the "boarders," or non-producing, hens are eliminated from the flocks.

At the state fair exhibit the practical working of these contests will be demonstrated and will be explained by Max Kortum, manager of the contest at Santa Cruz. Baby chicks will add life and color to the exhibit and the professional poultry raiser and city man with just a few "biddies" in his back yard ranch will find much of interest and profit in the exhibition.

Eugene, Oregon, has one of the most successful farmers shipping organizations in the country. It disposes of products of the members from livestock to fruits.

Have You a Producing Ranch?

IF NOT, WHY NOT?

The difference between a "live" and a "dead" Ranch is "Water" and "No Water."

AUCTION

60 HEAD OF HIGH-CLASS DAIRY COWS 60 Including

10 PURE BRED, REGISTERED HOLSTEIN COWS 10
3 PURE BRED, REGISTERED HOLSTEIN HEIFERS 3

1 PURE BRED, REGISTERED HOLSTEIN BULL 1
22 PURE BRED, REGISTERED RED POLLED COWS 22

24 HIGH-CLASS GRADE DAIRY HOLSTEINS 24
ALL TUBERCULIN TESTED

At the Rhoades & Rhoades Stockyards at CLEARWATER

FRIDAY, SEPTEMBER 3rd at 10 a. m. The registered Holstein cows are all young, fine individuals with exceptionally well shaped udders and bred in the purple. 3 head of two year old pure bred heifers that are away above the average. The offering of red polled cows is the first that has ever been made in this section, if not the state. The foundation herd came from Racine, Ohio. The herd bull which is to be sold was the First Prize calf at the Iowa and Illinois State Fairs. These cattle are strong breeders, very easy keepers and the polled feature is a good and strong characteristic. The grade Holsteins are strictly first class, 20 head either strictly fresh or coming in within six weeks, all young. TERMS: \$100 and under cash, over \$100, one-third cash, balance in monthly payments.

Livestock News Notes

LIVESTOCK SALE CALENDAR

Holsteins
August 26, W. M. Bray, Sacramento.
September 23, Alana Farms, Dixon.
October 20-21, A. J. Stalder, Riverside.

Herefords
November 4, Pacific Coast Hereford Breeders' Association, Sacramento.
November 5, J. H. Cazier & Sons, Sacramento.
November 6, H. M. Barngrover, Sacramento.

Shorthorns
November 18, Fimmel Ranch Company, Sacramento.

Poland Chinas
September 30, Wilotta Ranch, Suistun.
September 27, Hugh C. Shinn, A. J. Elliott and Alex D. McCarty, Tulare.
October 6, Kings Co. Poland China Breeders Assoc., Hanford.

A pioneer breeder of big type Poland Chinas in Humboldt County is N. Hauck at Alton. He is likewise a breeder of high class Guernsey cattle.

W. B. Hewitt, secretary of the San Fernando Valley Duroc Breeders Association, reports an interesting session at the July meeting of the association at Van Nuys. J. C. Craig made a talk on ways and means of forming a cooperative marketing association. The raising of funds for hiring a state field man for breed promotion was also discussed.

Secretary Chas. Paine of the California state fair has received notice that the Elliott-Brant Rancho, Owensmouth, will exhibit Guernsey cattle and Duroc-Jersey swine. The Elliott-Brant entries are expected to add considerable strength to the various classes.

E. W. Major, Los Angeles, who is one of the best known dairy cattle judges in America, has been selected to place the Jersey classes at the coming state fair. Major has officiated at many of the leading fairs of the West.

In our last issue it was stated that the prospects were that no Ayrshire cattle would be seen at Sacramento this year. Since the publication of the preliminary list E. B. McFarland of San Mateo has entered his popular Steybrae herd. McFarland has been one of the pioneer exhibitors of Ayrshires and his entries would have been greatly missed.

The dam of Cherub's Prince is Imp. Princess Bergere, grand champion at the National Dairy Show in 1916 and 1917. She has a production record of 11,509.9 pounds milk and 516.42 pounds butter fat completed as a mature cow in a double letter division of the Guernsey Advanced Register, also a record of 14,232.9 pounds of milk and 605.67 pounds of butter fat completed as a mature cow in the single letter division.

The American Jersey Cattle Club has announced that Sophie 19th of Hood Farm has just completed her ninth official record and now has to her credit a total official production of 110,918 pounds of milk and 6,353 pounds of butter fat. In the story of her accomplishment the statement was made that she now has a lead over Tilly Alcartra of 693 pounds of fat. That credit is true, but it should be remembered that while the figures on Sophie's production are for nine years, those for Tilly are for seven.

William Briggs of Dixon has just received an important shipment of Hereford cattle from Wyoming and Colorado. From the Wyoming Hereford Corporation of Cheyenne Mr. Briggs secured a number of cows and eight heifers. One of the cows is the dam of two winners at the P. P. I. E. and another one is the dam of a winning calf at 1919 Denver show, that sold for \$4,000. The heifers are sired by one or another of the following bulls: Wyoming Fairfax, Gold Dust and New Era. In the shipment was included a young bull from the Folcher and Kepler herd of Colorado. This youngster, Lincoln Domino, is regarded as a splendid prospect.

The Humboldt County Agricultural Fair will be held at Ferndale, September 14-18. Special stress is to be laid on the dairy cattle exhibits.

The management of the Second Annual Pork Day, to be held at Hanford, October 28, has announced that nine carloads of fat hogs have been entered in the various classes and it is expected several other carloads will be shown.

POULTRY STANDARDIZATION

The American Poultry Association in annual session at Kansas City appointed a committee of 40 to devise methods of standardizing judging of poultry and poultry products for exhibition and market. The committee will report to the next annual, held in August, 1921. Grant M. Curtis of Quincy, Illinois, was selected as permanent secretary of the committee.

The Snow Mountain Water and Power Company has a big force of men at work harnessing the water for their hydro-electric plant at Potter Valley. Richmond, Petaluma and other cities are also to get water from this source.

A cow testing association will be started at Point Arena, Mendocino County, the first of next November.

Hop picking started at Hopland the middle of August. Pickers are paid \$1.50 per hundred.

A PRECOCIOUS CHILD

The school was observing Lincoln's day by having the pupils write stories about Lincoln. One small boy wrote: "Abe Lincoln was born in Kentucky on a beautiful morning in February in a rough cabin which he had helped his father build."

Household Department

MISS PHOEBE'S HOLLYHOCK GARDEN

(Concluded.)

With beating heart she found his leash and fastened it to his collar.

"You'll always be kind to him, Mr. Preston, won't you? as—as long as he lives? I—there is nothing in all the world would make me part with him but going to New York. I—you—" she was down on her knees before Laddie, her arms about his great neck, shedding tears on his collar. She kissed him between his silky ears. David likewise lavishly embraced him. They watched Laddie's departure with tearful eyes.

"He wouldn't have cried so bad, Miss Phoebe," said David comfortingly, a few minutes later when they were in the garden, "if he could have understood why you was giving him away. He couldn't know you's going to New York where there's no place for him to stay at, and he thinks you don't love him any more."

THE VICIOUS CIRCLE

A playful pup pursued his tail in the midst of a busy street. Till his tongue hung limp from his gaping mouth and he wobbled on his feet: The passers-by were stirred to mirth as they watched his exercise. And they held their sides and they laughed so hard that the tears rolled from their eyes:

And someone yelled: "I like the way that you keep on chasin', pup. But you're plain damfool, for you're all one piece, so you never can catch up!"

The trainmen wanted a boost in pay So they argued loud and long, And the railroads let them have their way.

For the Brotherhood was strong; The miners started a husky kick For the raise they felt was due, And just as smooth as a juggler's trick Was the way the thing went through.

The dub that toted the humble hod Held an upturned palm for more, The truckman, too, and the white-wing squad

And the rough-necked stevedore, And after them came the roustabout And the stokers and the crew— A crowd with their eager hands held out, The cook from the galley, too.

The gods that from Elysian field gaze down on the spinning earth And see the frantic, scrambling race must be moved to tragic mirth; And Jupiter doubtless turns to Mars with a dismal smile, to say: "My word, old top, observe these fools run rings in their silly way! They're just plain nuts, for the whole blamed bunch forms a body that is one, And its head won't ever catch its tail, for it simply can't be done!"

—Ralph C. Strohm

"I know, David. Come, let's say goodbye to the garden!" It was early September and the air was fragrant with the lovely late hollyhocks.

"David, I want you to come here and play and look after my flowers when I'm gone, just as if I were here. They must not get lonely."

"Yes'm," replied David huskily. "I'll come, but it won't be nice without you and Laddie. The flowers all know you're going! I told them this morning. The lilacs said they would be awful lonesome next spring when they put on their purple dresses and you wouldn't be here to see them."

"Did they?" smiled Miss Phoebe with misty eyes. "You can tell them I said that I'll miss them too, David."

David suddenly remembered the catpillars. He brought her the box. "You must choose one of 'em, Miss Phoebe, to keep. Will it be a king or a president?"

"Oh, David, what a boy you are! You choose for me, darling, for anything so wonderful as a king or a president I never could make up my silly old head."

He picked her out King-Al-Yellow Top. "He ought to turn into a awful pretty butterfly, and when he does, Miss Phoebe, won't you please take him to live in a park? He would miss the flowers and trees and things. He'd rather live in a park."

"I promise, David, and he shall always have the best of care."

"Goodbye, King Al!" he cried. "And mind you like New York!"

"Goodbye, George Washington!" echoed Miss Phoebe, entering into the little game. "And don't forget the King."

It was late when Miss Phoebe retired and her sleep was light and broken and full of troubled dreams. When she finally opened her eyes, some one was calling her name. It was David. He was pale and trembling and his great eyes were full of pleading.

"Hide me, Miss Phoebe, hide me! There's a man her to take me away with him. I'm afraid of him, Miss

Phoebe—please don't let him take me—please let me stay here with you!"

She gathered him in her arms. "Darling, there is no one after you. No one shall take you—ever, unless you want to go. Now tell me all about it."

"Aunt Baxter, she ain't my really-truly relation-aunt at all. And Luke Jenkins, the man who's come to take me, he and my Aunt talked just now. My father isn't going to ever send her any more money for me 'cause he's dead and so she ain't agoing to keep me. She's going to give me to him to work, and, Miss Phoebe, he whips his horse awful, he does! And he whipped it just now and he laughed and said, 'See that, my young fellow? That's what you'll get if you don't mind me!'"

Miss Phoebe's mild blue eyes flamed. She hugged David's thin little body closer to her as if to protect him from Luke Jenkins' threatened blows. "Oh, David Boy, my dear, are you sure you understood? Are you positive your father is dead and Ann Baxter is not

your aunt? And who is this Luke Jenkins? I can't seem to place him."

She suddenly put David down and went into her room and commented dressing. "David's alone in the world," was what she was thinking. "David's alone!" Presently she came out and David saw that she wore her hat and coat.

"I am going out for a few minutes, David. No, you stay right here, darling, and there is no one coming to get you! Here is a new book. It was to have been my little farewell gift to you today, but you can have it now." She put it into his hands and kissed the top of his wellow curls. "I'll not be long, David, and when I come back we'll have a party."

He became so lost in the adventures of Ali Baba and the Forty Thieves that he did not notice that it was long past noon before Miss Phoebe returned. If David had not been such a little boy he might have noticed how quick her step was and the beautiful light that shone in her eyes. It was the kind of light artists try to paint in the faces of those who have found great happiness and peace. But David noticed nothing but welcoming arms she held out to him. "I'm going to keep you here forever and ever, David."

A sudden burst of sunlight flooded the room and lighted up a picture. It was the picture of the boy on the cover of yesterday's Post—a little yellow haired boy standing in a hollyhock garden. The words of old Vandy came ringing back to her with new significance. "Yes, Miss Mary has talent." (Let her have the picture!) "But Miss Phoebe has genius." (Let her have the boy!)

She laughed a low, rippling laugh that to David sounded like the peal of little silver bells. Then they both noticed that someone was tapping on the door. David hastened to open it. It was Laddie. He had broken his chain and come home.—Farmer's Wife.

To succeed one must be patient. The penitentiaries are full of people who were impatient.

—when "delicious and refreshing" mean the most.

HOUSEHOLD QUERIES

Dish Cement—Cooky Recipes

Answering query of Ripon subscriber as to mending cut glass: I have saved directions for mending dishes published in Cultivator of November 15, 1919. It is: "A good white cement for dishes is made by stirring plaster of Paris into a thick solution of gum arabic until it is of the consistency of cream. Use brush to paint this on the broken edges. Join accurately together and allow to set three days. Mix only as much cement as is needed for use at one time, as it hardens quickly and is useless for mending."

I would like you to publish in your columns some cooky recipes. Would like recipe for Panama Creams, if possible.—Subscriber, Santa Maria.

We appreciate very much the courtesy of our Santa Maria subscriber in sending the dish cement directions requested by our Ripon subscriber.

As to cooky recipes we give a number in another column. These are from "Mrs. Wilson's Cook Book," reviewed recently on this page. They will be found good and economical. We think the character of Panama Creams is largely due to the method of baking in the large factories. The cookies are baked on revolving trays in a very evenly heated oven. However, would suggest use of recipe given for soft chocolate cookies, leaving out the last step, the covering with damp cloth. Put two of these cookies together, back to back, with filling between made as follows:

Melt one-half pound marshmallows or take same amount of marshmallow cream. Cook one cup sugar and one-third cup boiling water until it threads. Pour slowly onto melted marshmallows, add half teaspoon vanilla and beat until thick enough to spread.

To Remove Calcimine

Please tell me how to get calcimine off a wall. It is peeling in places. The room does not appear to be damp. I want to get as much off as possible in order to paint the room with powder paint.—Subscriber, Crockett.

Use of warm water with cloth or brush will remove calcimine. Sometimes painters use wire brush, which may be purchased at any paint supply store. With this the calcimine is brushed off dry. After brushing, if wall is smooth finish plaster it may be smoothed off with sandpaper. Of course, if it is the rough finish, only the wiping or brushing can be used.

COOKIES, GOOD AND ECONOMICAL

Soft Cookies

Place in a saucepan 1 cup molasses, 6 tablespoons shortening. Bring to a boil and then add 1 teaspoon ginger, 1½ teaspoons cinnamon, ½ teaspoon allspice. Stir to blend and then take from fire and let cool. Now add 1 egg, 1 cup sour milk, 1 teaspoon baking soda. Beat with a Dover egg beater to blend and then add sufficient flour to make a soft dough that can be handled, usually about seven cups. Form into balls the size of a walnut and then flatten between the hands. Bake upon a greased and floured inverted baking pan in a moderate oven for about ten minutes.

English Seed Cakes

¾ cup sugar, 1 egg, 5 tablespoons shortening, 2 cups flour, 4 teaspoons baking powder, ¾ cup milk, 2 tablespoons caraway seeds. Place in a mixing bowl and beat to mix. Pour into a well greased pan and place the following mixture on top: Place in a mixing bowl 6 tablespoons flour, 4 tablespoons brown sugar, 1½ tablespoons caraway seeds, 2 tablespoons shortening. Rub between the fingers until fine and crumbly. Spread over the top of the cake and bake in a moderate oven for 35 minutes. To prepare the pan use a deep layer cake pan and grease it. Then line with paper and grease again.

English Rocks

Place in a mixing bowl 1½ cups brown sugar, 2/3 cup shortening, 2 eggs, 1 teaspoon soda, dissolved in 4 tablespoons water, 2 teaspoons cinnamon, 1 teaspoon nutmeg, 2½ cups flour, 1½ cups finely chopped nuts, 1½ cups finely chopped raisins. Mix thoroughly and drop by a teaspoon on a well greased and floured baking sheet and bake for 12 minutes in moderate oven.

Soft Chocolate Cookies

½ cup brown sugar, ½ cup syrup, 6 tablespoons shortening, 1 egg. Cream and then add ½ cup cocoa, ½ cup milk, 2 teaspoons baking powder, 4 cups flour, 1 teaspoon cinnamon. Work to a dough and then roll, cut and bake in a moderate oven for eight minutes. Cool and cover with a damp cloth for three minutes. Store in an airtight container.

Honey Cookies

Place in a mixing bowl ¾ cup brown sugar, ¾ cup honey, 1 egg, 7 tablespoons shortening. Beat to blend and then add 3¾ cups flour, ½ cup seeded raisins, ½ cup finely chopped nuts, 1 teaspoon baking powder, 1 teaspoon mace. Roll and cut and then bake in a moderate oven for ten minutes.

Crumb Cookies

1 cup molasses, ½ cup brown sugar, 6 tablespoons shortening, 2 teaspoons cinnamon, ½ teaspoon ginger, ½ teaspoon allspice, 1 egg, 5 tablespoons sour milk. Beat to mix and then add 2½ cups coarse bread crumbs and sufficient flour to make a very stiff mixture. Drop by the spoonful on well greased baking sheet, three inches apart. Bake in a moderate oven for ten minutes.

Sweet Potato Cookies

1 cup brown sugar, 4 tablespoons shortening. Cream well and then add 1 cup mashed sweet potatoes, 1½ cups flour, 1 teaspoon baking powder, ½ teaspoon nutmeg, ¾ cup raisins, 1 egg. Work to a smooth dough and then roll out on floured pastry board and cut ¼ inch thick and then bake for eight minutes in a hot oven.

Lace Cookies

Place in a mixing bowl 1 cup syrup, 4 tablespoons shortening, 1 egg, 3½ cups oatmeal, ¾ cup flour, 1 level tablespoon baking powder, 1 teaspoon vanilla. Beat just enough to mix, then form into round balls and set three inches apart on well greased baking sheet. Bake for 15 minutes in a moderate oven. Place ½ teaspoon of marshmallow cream on each cookie.

THREE TIMELY RECIPES

By Mrs. William Coffin, Earlimart

I am a reader of your very helpful paper and find many useful recipes in your household department and I am sending three that may be of help to some of your readers; a nice apple dessert, which can be made use of soon as apples will be plentiful, also fig pudding which will be nice for using up dried figs this fall and winter, and the Italian stew is a very economical dish as it is a whole meal of itself.

Stuffed Apples

9 large apples, 1 cup grated pineapple, 1 cup ground walnuts, 1 pint whipped cream slightly sweetened. Remove cores from apples and bake till nicely done, but do not let them lose their shape. When cold place each apple on a crisp lettuce leaf and fill the cavities with the grated pineapple and ground walnuts mixed together. Garnish with the whipped cream.

Fig Pudding

1 quart dried figs chopped fine, 1 cup bread crumbs, 3 eggs beaten separately, ½ cup sugar, 1 pint sweet milk. Mix all together in order given and bake in a moderate oven. Very nice served with sweetened cream.

Italian Stew

1 cup rice, one cup spaghetti, 1 quart can tomatoes, or the same amount of fresh ones, 20 cents worth of Hamburg steak, 1 medium sized onion, 1 tablespoon grated cheese, 1 teaspoon salt, 1 level teaspoon ground mustard, ¼ teaspoon black pepper, dash cayenne pepper. To prepare, put on to cook in separate saucepans the rice and spaghetti, also the tomatoes if fresh ones are used. While these are cooking cut the onion fine and mix with the steak, using salt and pepper to suit taste, and fry in a generous tablespoon of fat in a hot frying pan until done but not browned hard. Now put the cooked rice, spaghetti and tomatoes into a medium sized milk pan, add mustard, cheese, pepper and salt to taste, and if there is not enough juice in the tomatoes add a little hot water. Mix all well together and bake about 30 minutes, or until a nice brown. This served hot with a nice dessert and a cup of coffee makes a very wholesome meal.

This Style Book is Yours FREE!

THIS beautiful Book is Yours—Free.

One copy is yours as a reader of "California Cultivator." Thousands of you are now our customers. We want every reader of "California Cultivator" as our customer.

Therefore, this page is given up simply to tell you about this "NATIONAL" Style Book—this Book of Lower Prices—to tell you one copy is Yours—Free.

One Style Book is yours, IF—you write for it today

THE "NATIONAL" Money-Saving Style Book

NATIONAL CLOAK & SUIT CO.

THE new "NATIONAL" Style Book for Fall and Winter is now ready.

One copy is yours entirely free—just for the asking.

This Book contains 510 pages of *lower prices*. And just to see the new prices—*just to know at what prices you can buy*—this alone makes this Book necessary to you.

510 Pages—and every page of interest to every Man, Woman and Child.

The latest New York Styles are shown—authoritative "NATIONAL" Styles in Ladies' Coats and Hats, Suits and Dresses and Shoes—everything a woman wears—at the *new* prices.

There are Men's Suits and Overcoats, staple Suits and stylish Suits and Work Clothes, Shirts, Shoes, Underwear, Hats, everything a man wears—at the *new*, after-the-war lower prices.

There are Girls' Dresses and Boys' Suits—everything for the child from infancy to maturity—everything at the *new* prices.

We want you to write for your copy of this Book, because we want every reader of "California Cultivator" to see the new styles, to know the new prices and to know the "NATIONAL" Policy of doing business.

But the whole purpose of this page is wasted unless you see this new "NATIONAL" Style Book. So as a matter of saving and personal satisfaction as well don't turn this page before you write for your free copy of the "NATIONAL" Style Book—the Book of lower prices.

First: Everything guaranteed satisfactory to you or your money back.

Second: Every price we quote is a guaranteed price—we always offer a saving. But we offer quality as well. We believe a pair of shoes at \$5 that wears one year is cheaper than a pair at \$4 that wears six months. You think so, too.

Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double sacks, are the purest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6 and 7, and circular letter of information, "To Whom It May Concern".

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order.

SAN FRANCISCO SULPHUR CO.
624 California Street, San Francisco, Cal.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET"; also booklet "NEW USES FOR SULPHUR," Price-list and Samples.

Ask us for prices for Carbon Bisulphide, the surest remedy for destroying ground squirrels.

Holt Inspection

Standards accurate to within a hundred thousandth of an inch check all Holt gauges. Holt gauges, in turn, are a double check upon all material and parts that go into the making of the "Caterpillar" Tractor. One set of gauges is used by the workmen, another set by a corps of inspectors who check each process. By every possible means, Holt high quality is protected and maintained.

"Accuracy"—a most interesting booklet—will tell you all about it. If you are interested in "Caterpillar" Products, send for a copy.

Milo: No. 3, carlots, 2.75; Eastern No. 3, 2.83½.

Wheat: Mixed feed, Utah-Idaho, 63.50.

HAY

Alfalfa Growers of California under date of August 25 say: Lighter offerings gave alfalfa market an improved tone in most sections of the state. This is most marked in demand for ordinary grades which had been dragging for some time. Receipts in Los Angeles for the week ending August 21 much lighter than week previous, being approximately 1,000 tons, with 100 tons held over, as against 1,600 tons for the week ending August 14.

HAY
Alfalfa Growers of California under date of August 25:
There were 1,670 tons received in San Francisco the week ending August 21. We are selling hay for approximately as follows:
No. 1 Dairy Alfalfa.....29.00
Standard Dairy.....26.00
Stock Hay.....24.00
Under date of August 20 A. W. Scott Co. says:
Receipts past week 1,670 tons, caused by lack of demand and glut of hay on cars in San Francisco. As this is really a temporary condition we quote the market at only \$1 lower. Export is dull. Alfalfa light in arrival.
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market in San Francisco (for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions):

Per Ton
Wheat Hay, fancy26.00@28.00

Citrus Markets
Los Angeles, August 25, 1920.
Valencias had quite a sensational day in the New York auction on Tuesday. One sale went to \$13.30 while a very large proportion hung around \$7.00 to \$8.00. Practically all the markets show exceptionally good tone. Shipments have been exceptionally heavy in contemplation of the freight raise which takes effect this week. F. o. b. quotations sometimes reach as high as \$7.00.
Lemon market is coming back slightly and the number of foreigners now on dock have been greatly decreased.

Shipments
Shipments to date from Southern California since Nov. 1, 1919: Oranges, 27,443 cars; lemons, 7,200; total, 34,643. To same date last season: Oranges, 30,780; lemons, 8,756; total, 39,536. From Central California to date this season: Oranges, 5,375; lemons, 288; total, 5,663. To same date last season: Oranges, 3,714; lemons, 251; total, 3,965. Northern California this season: Oranges, 261; lemons, 23; total, 284. To same date last season: Oranges, 244; lemons, 2; total, 246.

CULTIVATION OF REDWOOD STUMP LAND
(Continued from Page 243.)
stump land as nowhere else has suggested planting on experimental plots berries of all sorts, for berries may be made to spread over and around the stumps, once the preliminary clearing is done.
Grasses, grains and clovers, small fruits and other crops will be given a thorough test. It is particularly hoped that practical grain crops will be found, for the larger areas are more suited to dairying than to orchards.
One grass, the Louisiana carpet grass, which is said to have been used successfully in the sugar pine forests of Louisiana, is one in which the great

est hope is being placed. It is said to be a hardy perennial grass, sprouting at each joint and therefore indestructible. It requires no cultivation after once planted, and no harvesting for the cattle are turned directly in to pasture upon it as it grows, and they thrive on it.
The forestry department of the University of California is also at this time planning a study of reforestation of this land.

AS THE POET MIGHT NOW REMARK
We are living, we are living,
In a grand and awful time!
And a quarter we are giving
For things not worth a dime!
—(Windsor) Border Cities Star.

KEEP IT UP
One step won't take you very far;
You've got to keep on walking.
One word won't tell folks what you are;
You've got to keep on talking.
One inch won't make you very tall;
You've got to keep on growing.
One little "ad" won't do it all;
You've got to keep 'em going.

THESE CHANGED TIMES
"I hear your son is determined to marry an actress."
"Yes."
"Permit me to condole yith you."
"Condone? That stuff's out of date. Why, she makes \$10,000 a week in the movies."—Pittsburg Sun.

CONDITIONS GOOD
H. L. Marsh, Western representative of the Utilitor division of the Midwest Engine Co., has just returned from the factory at Indianapolis. Mr. Marsh has made an extended trip of about two months, visiting all the principal cities of the Western territory. He also visited the factory of the Kardell Tractor Co. at St. Louis, which is now using the four cylinder heavy duty Midwest tractor motor. Throughout the entire field Mr. Marsh reports that conditions in the tractor industry are good.

City Comforts for the Farm

Nothing adds so much to the comfort and convenience of the farm home as a dependable water supply system. Plenty of fresh running water means better sanitation, better health and a great saving in time and labor.

Pneumatic Water System

does away with the drudgery of pumping and carrying water. Entire outfit can be placed in corner of basement or barn.

No elevated tank required. Takes water from well, spring or stream and delivers it under constant pressure to any part of house or yard.

The Leader is the most perfect water supply system known. Made in various sizes for homes, schools, hotels and public buildings.

Are Car Owners too Easily Satisfied with their Tires

If the front tire of the car at the left should blow out several days after striking this stone at speed, its owner would probably be at a loss to know what caused it.

What often happens in a case like this is that the inner plies of cord or fabric are ruptured, leaving the tire ripe for a complete breakdown, if not immediately attended to.

The safest way to avoid all such contingencies is to keep a sharp watch on the road at all times.

IN every community of any size there are two types of tire dealers—one who encourages his customers in their search for the best and one who tries to persuade them to be satisfied with what they have.

The first man is selling a service; the second, tires.

* * *

There are still too many motorists who meekly accept the blame for a tire that has worn out before its time.

They will listen while the dealer tells them of all the varying conditions that a tire has to undergo.

They will agree when he pictures them as lucky that they

got what they did out of a tire.

Not one motorist in five has yet found out what a tire is really capable of—how much he really has a right to expect from his tires.

* * *

The great mass of motorists in this country are just beginning to wake up to the fact that you can't encourage waste and have economy at the same time.

They are beginning to find out for themselves what makes for economy in tires.

And they are going to the dealer who not only sells good tires to the man who insists

upon them, but who *refuses to have anything but good tires* in his store.

* * *

From the beginning the whole weight of the United States Rubber Company—the largest rubber manufacturing concern in the world—has been thrown on the side of the *good* dealer.

Backing him first and last with all of its great and varied resources—greater and more far-reaching than those of any concern in the business.

And looking forward with confidence to the time when motorists *everywhere* will insist upon a higher standard of tire service.

Greater Interest is Shown in the State Fair at Sacramento

The Cletrac Never Tires~

The long grueling grind of open field plowing doesn't bother the Cletrac. This husky tank-type tractor never tires. Replaces four to eight horses—stands ready to work every minute, 24 hours a day, 7 days a week too, if necessary. Laying its own endless track, the Cletrac travels lightly over *any* soil, no matter how soft, without packing or miring. Plows deep and fast—lightens seed-bed work later on and helps produce bigger crops.

The Cletrac is economical too. Burns kerosene or distillate perfectly—and a boy can run it.

Let the Cletrac shoulder *your* plowing load. See the Cletrac dealer near you or write for a copy of the interesting booklet, "Selecting Your Tractor."

Easy going.

One Dollar Yearly

Next Week's Doings at State Fair Grounds

By J. A. Robson

IT has been said that it is impossible to satisfy everyone, but it does not seem possible that there is a person in the whole world who will not find at the 1920 state fair some feature which will amply repay him or her for the visit. There are so many hundreds of features created and conducted for the instruction and amusement of every class that it seems hard to believe that among all this great exposition of the progress of the people of California there is not a sufficiency for each, no matter what his tastes or hobby.

However, this big fair is fundamentally an educational proposition. It is primarily designed to encourage greater production on the farms of California and to create a desire in the minds of visitors from other states to settle here. That it has succeeded is evidenced by the fact that California walked up into the first rank of states providing foodstuffs for the whole world during the late world war. The function of the state fair is to reward the worker and shun the idler, to entertain and instruct and to, incidentally, provide sufficient amusement during its career to make the visit of the agriculturist a glorious holiday.

President George C. Roeding has many times stated that his ideal state fair was one in which every county of the state contributed a display and joined with a spirit of common interest for the benefit of the whole people. The 1920 state fair nearly approximates a perfect exposition. Thirty counties will participate this year, each showing some feature representing the chief industry of the people and embellished with an attraction which compels interest and investigation.

In the big agricultural pavilion which houses the county exhibits one may take a trip through the state viewing the finest products of each section from San Diego to Shasta. There will be golden oranges and cotton from the southern counties and peach trees laden with ripe fruit from the northern ones. All the food products of the torrid and frigid zones as grown in the Golden States will be shown, together with the lumber, mining and manufacturing industries and their products.

Then there will be a novelty which for real educational value will be appreciated by all ranchers and their wives. This is the "Power on the Farm" section. In an eight acre space covered with the largest tents ever made will be housed every kind and make of power machines used on the farm. These will be tested and demonstrated by Prof. L. J. Fletcher and his corps of assistants from the university farm school at Davis. Every bolt and working part of every machine, from the power churn to the tractor, will have its function explained. Experts will also be in attendance to point out the many advantages offered by these labor saving devices.

The theory that vocational training in the schools is the best sort of fit-

ting the young people for the serious business of life will be amply demonstrated by the school children of Oakland, Modesto, Los Angeles, Red Bluff and Sacramento. Each of these cities will bring a number of pupils who will engage in the actual work as taught in their respective schools. The Woman's Building will house the nursery, where nurses will be in attendance at all times to relieve the

head have been entered at this date and it is expected that over 2,000 will be the final number. The cream of the breeds on the Pacific Coast are here, and among them a \$41,000 Holstein bull and a \$10,000 Duroc boar. This is only a sample of the blue bloods of the barnyard that will be seen, all curled and manicured for the delectation of the visitor.

Hogs and horses, pigs, sheep and

latter each afternoon. All classes are well filled and the sport of kings will help fill the grandstands while these features are on. The racing greyhounds that chase a stuffed rabbit propelled by a motorbike will thrill and also amuse. Big money purses are offered these fleet footed animals and some track records are sure to be broken.

The director of amusements has not overlooked any bets in arranging his program for the afternoon and night shows, so there will not be a wait of a minute between races. A fashion show parade along a runway in front of the grandstand will show every class of gown from the evening creation to the bathing suit. Big circus acts, fireworks, boxing matches and a hundred other startling novelties, including a sensational parachute leap, will keep the crowd busy every minute.

If there is a feature which has been overlooked that would provide either education or entertainment for the patrons of this fair, in the language of the Southern gentleman, "It jist ain't."

SURVEY OF VENTURA'S SOILS

A thorough tillage of the soil rarely excelled anywhere distinguishes the agricultural methods of the well cultivated areas in the Ventura region, according to United States department of agriculture representatives who have made a soil survey of this section in cooperation with the University of California experiment station.

The results of the survey have been published in an illustrated pamphlet of 87 pages, together with a large soil map indicating in colors the various kinds of soils and their distribution. A study of the map, together with detailed comments in the text of the bulletin, will prove very much worth while to persons interested in determining the character of the soils on their property and their adaptability to various crops.

The investigators separate the soils of the area into four groups: Residual soils, or those derived from the breaking down and weathering of consolidated rocks; old valley filling and coastal plains soils, consisting of elevated and weathered unconsolidated deposits laid down in ages past by water; recent alluvial soils derived from sediments that have not undergone much change or internal modification since they were deposited and which are still in process of formation; and wind laid soils. The latter are confined to a narrow belt of drifting sand dunes along the ocean front. A striking characteristic of the soils of this region which lie near and slope toward the ocean is their relatively high content of organic matter as compared with soils of farther inland, and therefore less humid areas of the southern part of the state.

For the growing of sugar beets, the Yolo very fine sandy loam is considered best. It is thought probable that the culture given the beets aids in moving the alkali to lower depths, and this puts the soil in condition to grow beans. More than 95 per cent of the walnuts, another important crop, is grown on the soils of the Yolo series, mainly on the silt loam, fine sandy loam, and loam types. The investigators found that apricots thrive on a wide range of soils but are confined mainly to deposits derived from recent alluvial and old valley filling materials.

Anyone interested in learning the principal characteristics of the soil on his property should write to the United States Department of Agriculture, Washington, for a copy of this soil survey, which will be sent free of charge.

SOMETHING EVERY MINUTE

A NEW system has been inaugurated this year at the state fair which provides for a big and generous program of morning, afternoon and night attractions every day. In former years it was unhappily the custom to concentrate the big attractions on "Governor's Day," which worked an unnecessary hardship on visitors unable to arrange to visit the grounds on that date. The 1920 state fair will go down in history as a fair lacking any one big spectacular feature, but filled with those wholesome, entertaining and educative attractions which appeal to all ages, all tastes and all classes. Each day is so filled that it presents a never ending kaleidoscopic panorama of the state's best products, best music, best racing and biggest attractions. Hence, the visitor on any one day will feel that he or she has been well repaid for the visit. The tentative program including special days, is as follows:

SATURDAY, SEPTEMBER 4—"OPENING DAY"

"Agriculture Clubs Day"

Morning.—Judging poultry and rabbits.

Afternoon.—Two harness races; three running races; two dog races; auto hurdle act; Tiny Broderick parachute jump; "Airdevil" Panghorn in wing walking stunts; the five Avalons doing double wire performance; the Alf Golum troupe of Persian acrobats; Italian sextette in Grand Opera selections; Matheson's Military & Naval Band of 30 pieces; Boys' Band of Sacramento, of 30 pieces; Indian Boys' Orchestra of 10 pieces in Woman's Building.

Night.—Fireworks display; all circus acts, same as afternoon; Night Horse Show.

All Buildings Open Until 11 P. M.

SUNDAY, SEPTEMBER 5

Afternoon.—Band contests for \$3000 prizes, Military & Naval bands, Junior Amateur bands; all vaudeville attractions in front of grand stand.

MONDAY

"Sacramento Day"—"Business Woman's Day"

Morning.—Judging Holstein, Shorthorn and Jersey cattle, Poland China and Berkshire swine, Hampshire sheep.

Afternoon.—Same as Saturday.

Night.—Boxing match in front of grand stand; no fireworks; Dancing on Lawn Pavilion.

TUESDAY

"San Joaquin Valley Day"

Morning.—Judging Hereford, Ayrshire and Guernsey cattle, Duroc swine and sheep other than Hampshires.

Afternoon.—Attractions same as Saturday.

Night.—Fireworks; vaudeville attractions; Night Horse Show; No boxing.

WEDNESDAY

"Sacramento Valley Day"—"Cattlemen's Day"

Morning.—Judging draft horses.

Afternoon.—Afternoon attractions same as Saturday, including in addition the opening of the Kennel Club Show.

Night.—Attractions same as Tuesday.

THURSDAY

"Governor's Day"—"Rotarian's Day"

Morning.—\$1,000,000 Stock parade at 10 o'clock; Governor's Reception at Noon.

Afternoon.—Special Racing program and Bench Show; all afternoon and night attractions with special Rotarian stunts added.

FRIDAY

"Coast Counties' Day"—"Fruit Growers' Day"

Afternoon.—All afternoon and night attractions same as on previous days, including Bench Show.

SATURDAY

"San Francisco, Los Angeles and Farm Bureau Day"

Morning.—Demonstration Auction of Hogs by Farm Bureau officials; Auction of prize steer.

Afternoon.—Attractions same as previous days, with special stunts for San Francisco and Los Angeles visitors.

Night.—Attractions same as previous days, with Boxing Contests.

SUNDAY, SEPTEMBER 12

"Oakland Day"

Afternoon.—Band contests for Senior Amateur, Elementary and High School Bands. Afternoon attractions same as previous Sunday.

tired mother. Playgrounds also have been provided and every comfort offered the mothers and children.

The art department and the other features of interest to women will all be contained within this building. Rest rooms provide ample room for all and this year's fair may be visited in comfort by women with babies in arms.

The livestock classes have filled to the satisfaction of the directors of this important department. Over 1,500

goats will be here by the hundred. Pets and poultry never before seen in the show ring will grace the buildings set apart for the fanciers. A kennel show under the auspices of the American Kennel Club will attract dog fanciers from all parts and the night horse show always has been a big drawing card for the lovers of thoroughbreds.

Then there are the wonderful attractions, the harness and running races, two of the former and three of the

Agricultural News Notes of the Pacific Coast

Northern California

Butte County reports record number of forest fires during August.

Mendocino is planning a big county exhibit at the state fair in September.

The Southern Pacific has put on a special fruit train to handle shipments from Eldorado County.

Sonoma County board of supervisors has made an appropriation for display of exhibits at the state fair.

The Arbuckle, Colusa County, chamber of commerce is sending out premium lists for its almond fair.

The Live Oak Calf Club of Sutter County has made selection of calves which will go to the state fair.

The new evaporator of the farm bureau exchange of Eldorado County is now in operation at Placerville.

The first convention of the Sacramento Valley Draymen's Association was held at Chico, August 21-22.

The Livermore farm bureau center will hold its annual meeting and picnic on September 19 at Cresta Blanca.

The Eden Township Farm Products Show in Alameda County was this year bigger and more successful than ever.

Hop field inspectors say sanitary and housing conditions in the hop fields are up to state requirements in every way.

Colusa County has just filed four suits against rice growers for damage to county roads by flooding from irrigation of rice fields.

Prices named on prunes by the Prune and Apricot Growers Association are from a cent and a half to three cents higher than last year.

The application of the Pacific Rice Growers Association for lowering of the freight rate on rice 25 per cent is under advisement by the railroad commission.

The general committee of the Farm Products Show of Eden Township in Alameda County issued statement that the recent fair was a decided success.

Designs for the 1920 auto plates have been selected. The plates will be poppy colored and "Cal." will follow instead of precede the numerals as last year.

The Alameda County farm bureau home department devoted its last meeting on August 27 to reception to the new home demonstration agent, Mary G. Collopy.

Successful fruit packing schools were held in Eldorado County through cooperation of the farm bureau, University of California and the horticultural commissioner.

The federal public health service is investigating in the rice fields of Butte County to find out why mosquitoes breed in one field and not in another. Apparently the mosquitoes' choice of breeding grounds depends upon the character of the algae growing in the water.

Standardization of rice products is urged by Secretary Helleman of the California Farm Bureau Marketing Federation in a letter to the Glenn County Rice Growers Association. He further suggests sending Prof. Jaffa of the state university to a meeting of nutrition experts in Washington this fall.

Central California

San Joaquin County fair, Stockton, September 14-18.

The heat wave is passing and present weather conditions are fine.

Electric power users are greatly concerned over the continued shortage of juice.

Stanislaus County fig men are touring Merced and Fresno fig producing sections.

Lindsay has closed a successful cantaloupe season, the high price being \$6.50 per crate.

Bakersfield is planning for a Kern County cotton festival to be held Saturday, October 16.

Mono County is taking steps to protect its water supply and retain it on Mono County lands.

The Pacific Coast Labor Union is demanding \$7 to \$8 per ton or 75 cents per hour for vineyard work.

Horticultural Commissioner of San Joaquin County finds some Zinfandel grapes testing as high as 20 per cent.

One independent packer has announced New York prices of raisins four cents above raisin company prices.

Prune prices for the coming season on bulk basis range from 9½ to 25 cents per pound, according to size and quality.

Mariout barley, tested in San Joaquin Valley, shows remarkably successful production compared to common barley.

Modesto, Stanislaus County, is marketing its new crop of beans. Shipping does not begin usually till about September 10.

The California Farm Bureau Marketing Association continues to secure remarkably fine returns in all of its fat hog auctions.

Olive growers are concerned as to prices the coming season. So far no sales have been reported and present indications are that market will not be strong.

Investigation of vineyards and orchard trees shows material damage to fruit crops by the early August heat wave. Temperatures as high as 100 to 114 were recorded.

Cotton growers of Tulare County recently met at Lindsay and discussed matter of more complete organization of cotton growers and especially of securing sufficient ginning equipment.

San Joaquin County farm bureau meetings: Linden, September 8; Douglas, 9; Tracy, 10; directors' meeting, 11; county fair, 14-18; Lockeford, 13; Manteca, 17; Escalon, 20; Ripon, 21; Live Oak, 27.

San Joaquin County farm home department schedule: Manteca, September 3; Farmington, 7; Douglas, 8; River, 9; Escalon, 10; Ripon, 15; Lockeford, 16; Lodi, 17; Linden, 21; La Fayette, 22; Live Oak, 28.

Japanese associations, especially in the neighborhood of Lodi, Acampo and Woodbridge, are applying for articles of incorporation to "promote and protect union among the Japanese of America and maintain their rights."

Fruit dryers were startled at the light rain of last week, fearing a repetition of the hard rains of two years ago. However, no material damage was done excepting to table grapes, some of which were lowered in quality.

Southern California

The new Abbott gin north of Blythe has begun operating.

Escondido is completing its plans for Grape Day, September 9.

Ventura County reports: "Condition of Limas 51 per cent of normal."

Coachella Valley cotton harvest is on, the gin at Coachella starting on August 9.

Many a column of smoke has indicated forest or field fire during the past few weeks.

The first cotton of the season to sell from Holtville, Imperial County, commanded 35½ cents.

Poultrymen of Imperial Valley are getting together to form a cooperative marketing association.

Honey producers report season now ending as most successful; honey of higher quality than usual.

"Greatest goat milk producing center in the world" is the claim of Los Angeles County milk goat people.

Some cotton seed growers of the Palo Verde are holding for \$40. They say the \$20 price offered is preposterous.

A convention of the American Legion at San Diego declared in favor of the Colorado irrigation-reclamation plan.

John F. Osborne, recently selected assistant farm adviser for Riverside County, assumed his new duties September 1.

A Santa Ana hay dealer says that Orange County this year for the first time has raised sufficient barley for its own needs.

San Fernando Valley Fair and Market, September 15-18, at Owensmouth. Several thousand dollars will be distributed in cash prizes.

The Orange County Walnut Association will use the Gowen and White packing house at Santa Ana to handle this season's walnut crop.

A local center of the Riverside County farm bureau has just been formed in Coachella Valley. Organization meeting was held at Indio.

Coachella Valley had a half inch of rain the last week in August, accompanied by thunder and lightning. Indio was the storm center.

A number of Tulare County citrus growers will tour Southern California citrus sections this month. They will be in Riverside September 15.

Old folks of Southern California are asked to gather in Sycamore Grove, Los Angeles, Saturday of this week and have a jolly old folks' picnic. Only those above 70 are invited.

Yucaipa, San Bernardino County, is shipping Gravensteins. The fruit is higher quality than usual and the growers are supplied with improved packing house equipment as never before.

Some of the largest dealers and growers of cotton met in Los Angeles last Friday and discussed matter of quarantine which has caused some little friction between growers and authorities of California and Arizona.

Local farm bureau meetings will be held in Imperial County at Alamitos, September 7; Westmoreland, 8; Meloland, 10; Acacia, 13; Central-Highline, 14; McCabe, 15; Magnolia-Mulberry, 17; Seeley, 20; Alamo-Verde, 21; Lantana, 22; Mt. Signal, 24; Eastside, 27; Jasper, 28.

The Coast and General

Mint growing is a feature in Grand Ronde Valley, Oregon.

Mabton, Washington, will hold its annual hay palace fair September 15 to 18.

Bean jobbers at Denver estimate the commercial output of beans for that state at 600 cars.

Scarcity of water in many apple growing sections of Washington has seriously cut down the output.

Idaho will ship about 2000 carloads of fresh prunes to the East. These are mostly of the Italian variety.

A bonded cotton warehouse with limited storage capacity for the Salt River Valley is now an assured fact.

Many pear growers of the Wenatchee district of Washington report \$75 to \$80 a ton received for their fruit.

Several community inspection trips during August have been carried through by different farm bureau organizations in Washington.

A unit of the Oregon Dairymen's Cooperative League has been formed at Harrisburg, and a cheese factory and creamery will be erected at that point.

State tax levy for Arizona for 1920 has been set at 47½ cents; last year it was 60 cents. The county tax of Maricopa is 55 cents this year as against 73 cents last year.

From a small beginning the El Verjel Rancho Cannery at Chandler, Arizona, has grown to a point where they expect to put up 400,000 pounds of canned fruit during this season. This will be equal to 12 carloads.

Tillamook County, Oregon, fair, Tillamook, September 14 to 17; Hood River County fair, Hood River, September 17 to 18; Lane County fair, Eugene, September 21 to 24; state fair, Salem, September 27 to October 2.

Klickitat County, Washington, holds its fair at Goldendale, September 15 to 18. Walla Walla County holds its fair at Walla Walla same date; Adams County at Ritzville, September 16 to 18; Kittitas County at Ellensburg same date. The state fair will be held at Yakima, Washington, September 20 to 25.

It is stated that the federal horticultural board is considering the building of a big fumigation house at Nogales. This would have a capacity of ten cars. Products which might possibly bring from Mexico pink bollworm so disastrous to cotton would then be fumigated, greatly lessening the danger of importing this pest.

Rainfall over the ranges of Arizona has been rather more general than early in the season and has helped out pastures very materially over a considerable portion of the range. The rainfall has been light, but it is believed that there will be no serious shortage of either rain or pasture. Cattle generally on the range continue in good condition.

A pool of cotton representing a substantial number of bales sold recently in Phoenix for 85 cents a pound. There is some question as to whether this is considered the real opening market price for long staple cotton or not. Some growers have been confident of \$1 a pound, while some, not so optimistic, have expected that the opening price would be around 60 to 65 cents.

Summertime Motor Dangers

By James De Camp

As the thermometer rises owners of trucks, tractors and automobiles should increase their vigilance. California's warm weather will inevitably ferret out and bring to notice any latent weak spots in the anatomy of automotive equipment.

Tires, battery, lubrication and the cooling system demand more particular attention during the reign of summer than at any other time of year. Driving a machine does not require exceptional intelligence or long training, but keeping a piece of equipment on duty incessantly and economically is a science.

Overheating is one of the most common and disastrous of summer evils. Its prevention requires but a few minutes of time and, when one is working on schedule, a vast amount of patience. Fresh water should never be poured into the radiator until the temperature of the cylinder walls is such that the hand can be placed on the motor without discomfort.

This is a matter of five or ten minutes, yet many owners and operators will risk cracked cylinder walls and a steep repair bill rather than grant this short interval for the readjustment of the terrific temperature conditions existing within the motor.

If conditions prevent a stop of this length the best alternative is to introduce the fresh water with the motor running. Injury is less likely to result from following this practice, since the circulatory system churns the cool and the superheated water together, effecting a rapid fusion of temperature between the two.

The various units of the cooling system should be inspected occasionally to make sure that the water is circulating with maximum freedom and that no leaky joints or packings are causing mischief.

Lubrication is even more important in reducing the temperature of the internal combustion engine than is the cooling system. To run day after day and week after week without replacing the worn out vitiated oil in the crank case is comparable to using the same pan of water over and over again to wash your dishes.

The function of lubricating oil is to minimize the wear of surface against surface by interposing a smooth film of oil between. This oil is subjected to terrific heat and pressure and eventually loses its "body" or breaks down and conducts heat instead of resisting it. "Frozen" or burned out bearings soon result from continued delay in replacing oil in this condition with fresh, dependable stock.

Some engines, especially those that have seen several seasons of work, will render better service in hot weather on a slightly heavier oil than that used during winter. Thus many operators who use a light oil during the balance of the year substitute medium oil for the period from June to October as local conditions may warrant. Others replace medium with heavy oil. This practice results in placing a heavier film between the wearing surfaces during the months of highest temperature.

The general practice is to drain the reservoir at least once each thousand miles. By opening the drain cock or level indicator and drawing off a small quantity of oil in a can lid or some convenient receptacle the general condition of the oil supply may be noted. If the sample is dark in color and does not have a slick, slippery feel when pinched between the thumb and forefinger the oil supply should be renewed.

Flushing the crank case with kerosene after the oil has been removed is desirable providing no kerosene is allowed to remain in pockets or distributing pipes. If the oil system is of such a nature as to make depositing of kerosene impossible a full gallon or two flushings of a half gallon each should be used. Utmost cleanliness of funnels, containers, etc., is of course imperative.

If one has neglected to care for pneumatic tires his sins will find him out during the good old summertime. Then it is that the invisible fingers of the heat insinuate themselves between the layers of fabric, hunting incessantly for a spot weakened by under inflation, rim cutting, a neglected tread cut or some kindred evil.

Tires just recently put in service should stand the stress of the heated road while carrying their full load of pressure. Older tires that have seen several thousand miles of service or have worn down to the fabric should be inflated to within but five or seven pounds of their specified pressure when summer heat prevails.

Never commit the folly of placing a new tube in a casing that has seen the major part of its battle with the road. Many shekels are wasted by the American public through this common mistake which so frequently results in the rending of new rubber via the blowout route. If you have several old casings of dubious quality which you wish to wear out, postpone the experiment for cooler weather.

To get the greatest possible mileage from a set of tires it is necessary that each of the four units involved wear down evenly, losing its tread at the same relative rate as its fellows. This is impossible without a little well timed jockeying of the position of the tires.

The right rear tire will, of course, deteriorate more rapidly than the rest of the set, providing all are of uniform quality and age. The action of the differential in rounding curves and the wear of gutters, etc., make life a list of trials for this particular casing. When the right rear tire evidences a pronounced wearing down of the tread, usually after 2,000 to 3,000 miles of service, it should be shifted to the left rear wheel to balance the depreciation of the rear casings and the left rear tire be placed in the "wheel horse" position.

Later in the game, perhaps at 4,500 miles, the careful tire user makes a wholesale change in the position of his casings, usually placing the left front tire on the right rear and the right front on the left rear. At this time the casings should be inspected

(Continued on Page 277.)

Farm Power Exhibit and Service Demonstration

THE state fair offers a remarkable opportunity for an education as to farm implements, more particularly farm power, trucks and tractors. Presumably the auto exhibit will be near the entrance, as heretofore, and the truck, tractor and power exhibit near the south end of the race track, but

the arrangements of the tents and of the exhibits generally will make much more satisfactory display possible.

One of the most important features connected with this exhibit will be in the demonstration tent and in charge of Prof. L. J. Fletcher of the state university. There will be a big sign, "Repair and Adjustment of Power

Equipment," and under this sign Prof. Fletcher, with a staff of factory service men, will show visitors many of the things which mean so much in gas engine maintenance.

Prof. Fletcher remarks regarding this feature of the fair:

"Everything will be taught by steps. I call the plan we have in mind a

'cafeteria style' of instruction. Little groups of people will be given their chance in turn to learn one of the principles of gas engine maintenance after another. The tent will have an open space in the center for tables, chairs and displays of farm books and magazines. There will be an entrance on one side and an exit on the opposite side. The rest of the space around the walls will be divided into about 12 compartments, separated by

Where the Tractors, Trucks, Pumping Plants and Farm Power Exhibits will be made at the State Fair. The California tractor association is making an especially strong effort to gather one of the greatest exhibits of tractors, trucks, and power yet assembled on the fair grounds. Last year's exhibit was great; it was informal; it was an inspiration. This year's will exceed it in magnitude and as an exhibit of farm efficiency. It will be an opportunity for a liberal education.

George Collins.

railings. In each there will be a practical instructor conducting an informal school along the lines of his particular specialty."

The greater number of exhibits will be under direction of the California Tractor and Implement Association, of which George Collins is manager.

When You Flew a Kite *you recognized the value of three-point suspension*

Three-point suspension equalized the strain. With each gust or shift of wind the three leader-strings distributed the tension, and that's all that saved your kite frame.

Tracks and body-frame of the Best Tracklayer are connected on the same principle—at three points. Uneven strains and shifts of tension are taken up and evenly distributed. This relieves motor, transmission and frame from injurious twists and jolts. It means longer life for your tractor with fewer repairs. Tracks of the Best also oscillate independently, which lessens the bumps and jars and keeps ground traction uniform.

Design, materials and workmanship are the all-important factors in tractor success. Best Tracklayer design is the result of long years of tractor-building experience. So is the selection of correct materials for the different parts. Workmanship and plant equipment are the same as you will find in the plants manufacturing the highest-grade automobiles. The features that have made possible the reputation of the Best Tracklayer for power, dependability, long life and low cost of operation are described in our complete catalog. If you are interested in tractors we will be glad to send you this book. Write us.

60 H. P. at Pulley
35 H. P. at Drawbar

Shipping Point Inspection Service on Fruits and Vegetables

THE California department of agriculture, in cooperation with the federal bureau of markets, has perfected the establishment and application of grades and standards for fruits and vegetables, and the shipping point inspection service is now open to the trade. Inspections of carlots of fruits and vegetables will be made upon request by growers, shippers, receivers or other interested parties. Handlers of California fruits and vegetables in terminal markets should make application for such inspections as they desire through their California shipper.

Inspections will be made at the rate of \$5 per carload and \$2.50 for less than carload lots. A fee of \$10 will be charged for mixed cars containing five or more varieties or commodities. Inspectors will be located at the following points: San Francisco, Los Angeles, Sacramento, Stockton, Lodi, Fresno, Watsonville and Sebastopol, and others will be added as the needs warrant. Inspections will be made anywhere in the state as the facilities of the service may warrant. Certificates of inspection, receivable as prima facie evidence in the courts and practically identical in form with the certificates issued by the bureau of markets at the terminal market centers, will be issued on each carlot inspection. Inspections will be made at all the above points for the fees established. The expenses of the inspector will be added to the fee for all inspections made at outlying points.

Every car of apples moving from the Watsonville and Sebastopol districts this season will be inspected by duly authorized state inspectors and will carry certificate of inspection. The grape deal is manned by a corps of highly trained inspectors and requests for inspection will receive prompt attention. A corps of men will also be located in Southern California to handle the vegetable shipments from the Los Angeles district.

All receivers desiring to take advantage of this service should make application through their shipper. All shippers should make application direct to the local office of the inspec-

tion service or to the state department of agriculture at Sacramento.

F. W. Read, for five years connected with the federal bureau of markets, has been appointed to take charge of the work. L. J. Weishaar, formerly inspector for the federal bureau of markets in Kansas City and Chicago, will take over the active supervision of the inspection work, will give it the same thorough attention and will train the inspectors in the same thorough manner as the federal inspectors are trained. H. E. Truax, standardization and grading expert for the federal government, has been assigned to California to assist by making a thorough investigation of proper grades and standards for California products. H. W. Samson, in charge of the grades and standards project for the federal bureau of markets, will make a trip to California during the month of September with a view to training the apple inspectors in the Watsonville district in the proper method of handling a shipping point inspection service. The inspection service announces requests for inspection have been made for 8,000 cars.

While the federal government has for years maintained a system of inspection at receiving markets, no adequate system of inspection has ever been undertaken at the shipping point, and in undertaking this work the state department of agriculture fully realizes that trained men with a commercial viewpoint are essential to the success of the plan. Receivers having no personal representative in California may now obtain an impartial inspection by a disinterested third party, which should prove of value in making purchases. Shippers desiring to sell f. o. b. California or f. o. h. California acceptance will be able to make wide use of the inspection service.

The big grape deal which is now in full swing will receive careful and thorough attention and all receivers of grapes may make use of this service on any cars they desire. Inspections will also be made on Stockton potatoes and onions, either in Stockton, San Francisco or Sacramento, and as far as facilities permit on any commodities shipped from the state.

Fumigation and Cover Crops

By Ernest Branton

FUMIGATORS are most active now in all citrus districts and men, tents, and even the old fashioned cyanide pots may be seen from every well travelled highway. After the scales are killed the orchardists will prepare for the sowing of winter cover crops. The greater part of this work will be done during the first half of September.

Out in the Whittier section, east of Los Angeles, where soils are heavy, none could be found among the orchardists who were not going to sow mellilotus and generally a light sowing only. C. L. Trueblood states that he gets a good crop in his young orchard with about seven pounds of seed to the acre. This is quite in contrast to those who sow 30 pounds. He says that mallows, filaree and foxtail so fill up the soil that he cannot plow it all under and last year had to haul some off the land and use for hedging in the stable. Each year he sows broadcast, harrows it lightly, opens furrows for irrigation and so leaves the soil until time for disking in spring.

A nearby walnut orchardist said that in 1918 he had little time and did not irrigate either just before sowing mellilotus or for some time after. The crop scarcely grew at all until in spring just when he should have liked to plow it under, so he deferred plowing until May, when he had a fair growth. In 1919 he irrigated first, prepared the soil well and again irrigated after sowing. Results were highly gratifying, the crop being early and of great size. He said the best way to treat mellilotus is to give it a good start early. If it does not get this hoost before cold weather comes its development is slow and disappointing, yielding its best a full month

later than it should be turned under.

A neighboring lemon grower had rather an odd tale to tell. With a heavy soil he needed humus. Finding that he could get for the hauling all the "cleanings" from a nearby barley feed mill, he hauled tons of it into his orchard. He says that among other things it contained enough mustard seed to sow the entire country, with assurance of a good stand. If every other species of weed was not in evidence it was because the mustard choked it out. Now when he sows a cover crop the mustard so overwhelms it that the attempt to grow mellilotus or other preferred crop is as rank a failure as the mustard crop is a success. An orange grove in heavy black soil was found to have scaly bark throughout, up in the trees to a height of 15 feet. Dead wood an inch in diameter was thickly shown in all parts of the trees, though foliage color was generally good. A new owner had just taken charge and the dead wood was being cut, while a "tree doctor" was up in the tops scraping every scaly spot found and painting it with an asphalt mixture. It is expected this treatment will restore trees to their former vigor and healthful appearance.

IN A HURRY

A college student once asked President Eliot of Harvard University if he could not take a shorter course than the one laid down in the prospectus of the institution. "That depends," replied the level headed president, "upon what you wish to make of yourself. When nature wants to make an oak she works away on the job a hundred years, but if she only wants to make a squash she needs only about six months."

Copyright 1920, by The Goodyear Tire & Rubber Co.

"The use of a truck on Goodyear Cord Tires has increased my land value by bringing my farm closer to town. Power machines, assisted by this pneumatic-tired truck, offset my labor shortage. The Goodyear Cords on my truck have traveled about 10,000 miles to date. Solids can't go into the soft fields; pneumatics go through easily—haul 450 crates to 40 by team. Hard to sell a second-hand truck on solids here."—Glenmore Green, Farmer, Fort Valley, Georgia

EXTENSIVE rural experience, like that related above, has confirmed the tendency of farm land prices to increase when Goodyear Cord Tires are used to cover long or difficult hauling routes.

Fertile acreages, ten or twenty-five miles from the nearest town, have become more profitable and hence more saleable due to improved transportation on these able and rugged pneumatics.

What formerly was a tedious and jarring haul by either team or motor truck, has become a brisk, smooth trip due to the grip, cushioning and spryness of the big Goodyear Cord Tires.

These virtues frequently enable short cuts to market, bring more markets within easy-hauling range and pave the way for the safe, punctual transit of perishables and shrinkables.

The huge strength of Goodyear Cord construction, developed with the manufacturing care that protects our good name, makes possible the utmost utility and economy of this type of pneumatic tire.

Detailed information, concerning the manifold advantages of pneumatic-tired trucks and general farm motorization, will be sent on request by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

Manufacture and Preservation of Cider

Cider has long been a most popular beverage. The demand for it during the fall months is seldom equaled by the supply. Certainly during seasons of high apple prices, like the present one, good cider is at a premium. It may be doubted, says V. R. Gardner of Missouri college of agriculture, if it is profitable to use for cider purposes fruit that can be placed upon the market as a first grade or even second grade product when these grades represent a value of over one dollar a bushel at the orchard; but in practically every orchard of good size there will be a portion of the crop that can and should be made into cider. This portion includes undersized, misshapen, mechanically bruised, scabby or spray injured but otherwise sound fruit. It is a mistake to think that low grade culls, wormy, underripe, partially decayed, or early windfall specimens will make good cider. The juice from such fruit may be pressed out, but it is suitable only for a low grade of vinegar. The quality of cider as a beverage, or for vinegar making, depends very largely upon the sugar content of the fruit juice, and this in turn is largely dependent upon degree of maturity of the fruit. Green, underripe fruit contains much starch but little sugar. Highest content is reached when the fruit is mature, when it is neither under nor overripe. The importance of proper maturity cannot be overemphasized if quality of fruit is an important consideration; for high sugar content is usually correlated not only with richness of flavor but with color and clearness as well. Likewise, it is difficult to overestimate the importance of cleanliness from the time the fruit is gathered and sorted for cider making until juice is pressed out, clarified, pasteurized and stored in containers. Dirt, dust and decaying organic matter of all kinds are laden with bacteria and yeasts that cause undesirable fermentations, cloudiness, sliminess, and deterioration in other ways.

Cider will keep sweet for a number of days, generally long enough to dispose of for beverage purposes to good advantage, if made under sanitary conditions and promptly stored in a cool place. The colder the storage room the better. It can be kept for weeks if at once placed in cold storage at a temperature of 30-32 degrees Fahrenheit. If desired for beverage purposes long after its manufacture in the fall, canning may be resorted to. It should be canned like any of the ordinary fruits, such as peaches or pears. Canning, however, imparts to cider a slightly "cooked" taste that is objectionable to many. A half cup of powdered ginger added to a barrel of fresh cider serves to check fermentation and keep it sweet for quite a while, especially when it is stored in a cool place. The ginger imparts some of its flavor to the cider, but this is not apt to be found objectionable.

Still another method of procedure is, immediately after being pressed out from the apple pulp, and before any fermentation sets in, to run the cider through an ordinary cream separator. This serves to remove particles of solid matter and gives a bright clear product. Then at once put in sterilized containers, such as bottles, cans, carboys, etc., and heat for one hour in a water bath at a temperature of 150 degrees Fahrenheit. This will sterilize the juice without producing a "cooked" taste and when hermetically sealed will keep for a long time. There are other methods of preservation, but they are more adapted to use in large by-product plants provided with equipment for clarifying, sterilizing, pasteurizing, bottling and refrigeration. The farmer who has only a few barrels of cider to dispose of can generally market it to best advantage in the fall shortly after it is made, or if he wishes to preserve it for his own use he can employ some of the simpler methods mentioned in this article.

Regulations for Packing Ripe Olives

For several years past in California a number of cases of botulism have occurred in persons who ate home canned fruits and vegetables, chiefly asparagus, corn, apricots and string beans. The reason that cases of this disease did not occur in persons who used commercially canned products is due to the fact that the intense heat to which most commercially canned products are subjected destroys the causative organism. Last year it was found that some packs of commercially canned ripe olives, not properly sterilized, were responsible for several cases of botulism in persons residing in Eastern states. The National Canners Association immediately provided a grant under which Dr. E. C. Dickson, Stanford University, Dr. Carl Meyer, University of California, and Major J. C. Geiger of the United States public health service started investigations to determine cause and prevention of botulinus poisoning. W. B. Cruess, assistant professor of zymology of the University of California, also carried on investigations from a commercial standpoint regarding the effects of various methods of sterilization of ripe olives against botulism.

These experts have now provided the California state board of health with data upon which regulations for the packing of ripe olives have been prepared. Accordingly, packers of ripe olives are now required to comply strictly with the food sanitation act in the packing, handling, cooking and other preparation of the product. They are also required to keep all holding solutions, holding tanks, separating trays, curing tanks and curing solutions, as well as the premises on which their operations are conducted, in a strictly sanitary manner, as provided by law. The board requires further that ripe olives shall be deemed adulterated, within the meaning of the California pure food act, unless they shall have been sterilized at a temperature of 240 degrees Fahrenheit for a period of not less than 40 minutes. The director of the bureau of foods and drugs is instructed to seize and quarantine all ripe olives that are not

produced in conformity with these regulations. Based upon the extensive investigations conducted by Drs. Dickson, Meyer, Geiger and Prof. Cruess, the California state board of health is convinced that all danger from botulinus poisoning due to ripe olives will be removed through the enforcement of these regulations.

DEPARTMENT ACTIVITIES

Out at Alhambra, Los Angeles County, where both state and federal governments have insectaries, experiment stations and laboratories, time works many changes. Messrs. Larsen and Simmons of the bureau of entomology have combined headquarters with Roy E. Campbell, specialist on investigations of insects on vegetables and truck farm crops. W. M. Davidson, formerly in the same building, investigating insect pests on fruit trees, has been called to Washington for instructions and will go to Virginia on insecticide investigations. D. G. Milbrath, pathologist, is in Washington for consultation and hopes to return with one or more assistants. These absentees and removals, with Mr. Woglum's going, make quite a change in Uncle Sam's forces at Alhambra.

ALTADENA AVOCADOS

On the site of the old West India Gardens, formerly a nursery for tropic and subtropical fruits, F. O. Popenoe has a very interesting collection of such plants formerly used as stock for budding, mainly of avocados. One new variety, the Atlixco, is believed to be confined to one tree here and one at J. T. Whedon's, Yorba Linda, where both are fruiting. Mr. Popenoe has 500 trees, consisting of 100 Fuerte, 50 Perfecto, 50 Grande, 50 Taft, the remainder of many varieties. With Mr. Popenoe the Cultivator man visited a beautiful young grove of Fuerte near San Gabriel, owned by W. F. Moomaw. There are 150 trees planted 24 feet apart, two years old, in splendid vigor.

Wise Men of East and West

THE business side of farming is coming more and more to the front. Formerly our state conventions and various county or section gatherings discussed questions of culture, questions of methods, how to do this or that for the crops, or how to do this or that for the purpose of killing certain pests. That custom has not been discontinued entirely, but many a grower today is saying "We can grow the crops, but who will sell them." California began a discussion of this farm business the first of all producers. At least it was one of the first to arrive at commercial methods, and these successful methods have been an inspiration for others of both East and West, for from Europe and our own Eastern

states delegates have come to learn of the wise men of the West, and from Australia and New Zealand they have come to the wise men of the East. Our last delegation came from the great wheat and corn belt of America. It was under the general leadership of the American Farm Bureau Federation. The delegation started under the direct leadership of President Howard of the federation. He came with the delegation as far as Denver, at which point cooperators in the marketing of wool gave and asked information as to marketing of that, one of the greatest products of the mountain states. President Howard then found it necessary to return. The delegation was met on their entrance to California and first given a view of cooperation as it affects

the producers about Riverside. Messrs. Wherrell, Valle, Fox and Neublung were members of the committee receiving and giving welcome and showing on their way the investigators. Additional glad handers from the Los Angeles chamber of commerce, the farm bureaus of Los Angeles and Orange Counties and all the cooperative organizations aided the visitors in securing information as to every angle of cooperative marketing. Complimentary luncheons or dinners were

fund of information, and we believe of inspiration, for the grain growers of the Middle West. California wishes them all kinds of success. The entire state is to be traversed after investigating Southern California conditions, visiting fat hog auctions in Kings County, learning as to raisin, peach, fig, dalry, prune and apricot cooperators. There was much disappointment in that President Howard of the American Farm Bureau Federation was un-

On the Heights of Orange County

The farm bureau marketing investigators were led in a merry chase by the Orange County committee, being taken over the skyline drive of Lemon Heights. The view from where the autos are standing is magnificent. Thousands of little farms and some great estates are lying at the foot of these hills. The view stretches on to the island of Catalina in the distance. The camera does not do justice to the wonders which were visible to the eyes of the visitors.

One of California's Finest Citrus Packing Houses

The packing house of the Placentia citrus growers. This building is wonderfully attractive in appearance and fitted with equipment more complete than any we have ever seen. The handling of fruit is almost automatic from the time the box is set on the carrier where the boy with bicycle is standing till the time it is carried out at opposite side of the building and loaded in freight car. The cost of this building and equipment is approximately \$120,000. The farm bureau marketing investigators were visiting this building at the time this photo was taken.

served at almost every stopping place.

The grain growers of the Middle West have a vastly more difficult problem than have the fruit growers of California. Take, for instance, the walnut or the citrus people. They are gathered together at a comparatively small section and are more at the mercy of unjust commercial practices than are the wheat growers. This necessity forces a getting together. The great distance from market is another factor calling for cooperative methods and the further fact that the products are more easily controlled or cornered by the trade also induces cooperation. In either case 10,000 or 15,000 growers make up the entire industry, while with wheat growers they are numbered almost by millions. But plainly the farm bureau movement has enabled a closer getting together and the few who visited California with open eyes are returning with a great

able to continue his trip this side of Denver. Other attendants assured California people that they would see that President Howard likewise would regret his not being able to observe California methods of cooperative marketing and enjoy California hospitality. Those who did come from the East were R. R. Bausman, county agent of White County, Indiana; J. G. Brown, president Indiana F. B. Federation; H. G. Beal, treasurer Ohio F. B. Federation; E. G. Nourse, professor agricultural economics, Ames, Iowa; H. Steen, Prairie Farmer, Chicago; Wm Eckhardt, business manager Illinois Agricultural Association; M. C. Phelps, Arizona F. B. Federation; C. F. Brown, president Arizona F. B.; Andres Kimball, president Arizona state board of agriculture; Dr. W. H. Walker, president California F. B.; J. A. Teagarden, chairman marketing committee California State F. B. Federation.

When Writing Advertisers Mention California Cultivator

THE FARMER AND WORLD TRADE

By E. W. Wilson

The author of this article and of others which will follow is E. W. Wilson, vice president of the Anglo & London Paris National Bank. He has made a special study of foreign trade problems and particularly of their relation to agriculture. All of these articles will be short and we trust of value in giving to Cultivator subscribers facts regarding trade relations.

THE American farmers should not pass lightly the statement made by the secretary of agriculture to the effect that their prosperity depends largely upon foreign markets. Something like one-fourth of the products of the farm find ultimate purchasers in the markets abroad. Sixty per cent of the cotton raised in this country is exported. In California alone the products from the prune orchard, the raisins from the vineyard, lumber from our forests, peaches, apricots and other fruits, canned and dried, are all exported in large amounts.

Widening Markets Stabilize Price

This fact is alone sufficient to warrant a campaign of education urging the study of international markets by all of our people. In this study of world markets it is necessary to become familiar with the various agencies that are brought into use in locating markets, in selling merchandise in foreign lands, in transporting and in financing these products.

All great world movements are preceded by campaigns of education. At the present time people located in the vicinity of export and import centers are interested in these market problems but until their interest extends back into the country and until the farmers who receive very large benefits thoroughly understand it, this country will not be engaged in international trade in either an intelligent or a substantial way. There is every reason why the cotton raiser of the South, whose cotton goes abroad; the corn producer of the central states, whose products are distributed throughout the world, and the raisin grower and prune producer of California, the price of whose products is largely controlled by the demand abroad, should be active advocates of international trade and fully informed on every angle that influences this trade.

To be effective in this educational work, the subject must be presented to those engaged in tilling the soil so that its relation to their profit account may be made apparent. The farmer does not differ from the man of the factory, the store or the accounting house. Like his fellow business man, he sees more readily and more clearly those things that yield him a profit. When he can reckon in dollars and cents the benefits he receives from foreign trade, he will at once be interested. This interest will be manifested in the sympathetic aid on the part of his congressman and other governmental agencies that he can influence.

Is the interest of those engaged in agriculture worth while? If it is, does it not become a problem of sufficient importance to enlist the aid and support of all who advocate a policy of helpfulness?

WATER POWER ACT FINDS FAVOR

Applications for more than one-half million horsepower have been filed with the U. S. forest service in connection with the water power bill signed by the president on June 11.

The increasing cost of fuel and the difficulties of its transportation have put a premium on water power, say forest service experts. It is expected that the legislation will mark the beginning of a new era in power development in the United States. Big developments are to be undertaken in the near future in the East, South and West.

The act applies to all power sites on public lands and reservations and on the navigable waters of the United States, including international boundary waters. Its administration is charged to a commission comprising the secretaries of war, interior and agriculture. Full details of the act, such as licenses, rates and service, may be had upon application to any of the departments named.

ARIZONA STATE FAIR

The Arizona state fair dates have been definitely set for November 8 to 13 inclusive. Preparations are being made for a worth while exhibit in all lines. Shirley Christy, secretary of the fair association, says: "It will be the special purpose of the commission this year to emphasize the vari-

Easy Now to Saw Logs and Cut Down Trees

Only one man, or even a boy, with the improved Ottawa Engine Log Saw can easily cut twenty-five to forty cords a day, and at a cost of less than 2c per cord. This machine, which outdoes all others, has a heavy, cross cut saw driven by a powerful especially designed 4 cycle gasoline engine. It's a fast money-maker for those using it, and does more than ten men could do, either cutting down trees, sawing logs, or buzzing branches while you rest. When not sawing, the engine can be used for other work requiring power.

Patent Applied for. Beware of Imitations

The entire machine is mounted on truck wheels to make it easy to move to the trees or logs, and from cut to cut on a log without stopping the engine. For moving on the road, the truck wheels are placed parallel with the skids and the rig hauled straight ahead. The wheels turn on a two-way spindle. You do not have to take them off, but can change direction of wheel travel by merely taking out a pin.

The Ottawa can be fitted for sawing down trees. It cuts level with surface of ground, thereby getting all the timber and leaving no stumps sticking up. An automatic friction clutch stops the saw in case of undue resistance. Two men can fall forty to fifty trees a day in ordinary timber.

The outfit is compact, simple, durable against a lifetime of hard wear, sells for a low price, cash or easy payments, guaranteed for reliable operation in the hands of every one who has trees to cut down and logs to work up.

Full information and low factory price to you can be had simply by addressing the Ottawa Mfg. Company, 2744 Wood St., Ottawa, Kansas.

Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDew or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double

sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6, 7 and 8.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order.

SAN FRANCISCO SULPHUR CO.
624 California Street, San Francisco, Cal.

We are equipped to make immediate shipments. Send for Price-list and Samples.

Ask us for prices for Carbon Bisulphide, the surest remedy for destroying ground squirrels.

ous exhibit departments in a way they have never before been emphasized. To this end we have made a very careful selection of department superintendents and can assure exhibitors that they will be tendered fullest cooperation, and that a proper interest will be taken in their displays."

SUMMERTIME MOTOR DANGERS

(Continued from page 269)

carefully for cuts and bruises. If time allows it is also a good plan to remove the tubes and dust the inside of the fabric with talc.

This plan of rearrangement applies only to trucks and passenger cars beginning the season with an entire set of new pneumatic tires. When tires of various ages and conditions of servitude are used, only observation and condition can dictate the way to greatest service. One thing is certain—the man who places a tire on a wheel and runs it there until it becomes useless is sacrificing real hard coin in the shape of mileage.

A common summer tire peril in California is the softening and melting of crude oil in imperfectly surfaced roads. Crude oil and rubber mix with disastrous results—as far as the rubber is concerned. A piece of waste moistened with kerosene and a few minutes of vigorous sponging will antidote tire decay from this source.

Right here it seems apropos to address a plea to truck and tractor owners for the protection of California's incomparable highway and roads system. Many short sighted persons are damaging public property and increasing their own taxes as well as the assessments of others by butchering expensive road surfaces with tractors and overloaded motor trucks during the hot part of the day.

In many cases this is unavoidable, yet considerable damage could be prevented if tractor operators would change fields in the early morning or late evening when possible and would, whenever opportunity offers, seek dirt roads in shifting about. Ranchers along the Rio Hondo in El Monte district are setting a good example by using the firm sand of the river bed as a tractor causeway during the rainless months.

Modern motor equipment will not carry one far afield if the battery fails to function, unless he is so fortunate as to be equipped with a magneto as well. On the contrary, one would probably remain far afield for some little time, at least until a service car could arrive, if his battery should become overheated beyond the safety point.

This trouble is particularly liable to occur when taking a long run on a hot day. If the car is used steadily and the generator keeps the battery cells well charged the battery should be inspected for overheating several times a day when touring in warm weather. If the connectors on top of the case feel hot to the touch all the lamps should be burned until relief is noted. If a dairy thermometer is at hand, take the temperature of the fluid in the cells. If the reading is around 100 degrees, switch on the lights at once. A temperature of 120 degrees will, in most instances, send the battery to the junk heap.

Although the external appearances of a piece of equipment may seem to count for but little, the preservation of color and finish is a factor to be reckoned with in re-sale value. Agriculturists who protect their automotive equipment carefully from rain often permit the sun to damage appearances to a greater extent than moisture is capable of doing.

If there is a shady spot handy for your truck or tractor, make use of the opportunity to treat these dumb work-fellows with the same decency you would accord a horse. Remember that while clothes do not make a man they reflect character and personality. Likewise, the condition of your equipment shouts abroad your habits and your attitude toward your property.

RANGE OF THE GIPSY MOTH EXTENDED

The gipsy moth has been discovered in west central Pennsylvania on trees from a New Jersey nursery. Shipments from this nursery have gone to 14 states, and there is a strong probability that the moth is widely scattered at this time, but the utmost efforts of federal and state officials will be centered on its extermination.

See How Essex Proved Economy

A Nation-Wide Demonstration No Motorist Can Overlook

Connecticut—With 12 cars over Mohawk Trail and Hoosick Mountains and 12 over a coast route—many owner driven—216 miles average distance per car, 18.7 miles per gallon were shown. One car with 35,000 miles service averaged 21.2 miles per gallon.

Nebraska—A Hastings, Neb., woman drove her Essex from Lincoln to Hastings, 109 miles, averaging 28 miles per gallon.

California—Four women drove from Los Angeles to San Francisco and return averaging 22.3 miles per gallon. A San Francisco Essex made the round trip, 846 miles, in 33

hours with 23 miles per gallon. Hood and radiator sealed. **San Antonio, Tex.**—In a 166 mile run to Austin and return Essex averaged 25.5 miles per gallon.

Sacramento, Calif.—Defeated 19 entries and took Tallac Cup for highest gasoline, oil and water mileage in Sacramento Dealers reliability run.

Baltimore, Md.—Essex sedan, on original tires with 15,000 miles service, traveled 221 miles over Maryland hills, averaging 23 miles per gallon.

Florida—On a measured gallon an

Essex covered 23 miles and without change or adjustment of any kind showed speed of 68 miles per hour.

49 Cars Average 18.9 Miles Per Gallon—Records cover every kind of test at a speed of from 5 to 72 miles per hour.

Los Angeles, Calif.—To San Francisco over 828 mile route of steep grades and frequently far from water supplies Essex which had previously gone 28,000 miles and under U. S. Marine observation made trip sealed in high gear with sealed hood and sealed radiator. Average 22.8 miles per gal. gasoline.

Also Broke World's Dirt Track Record---1261 Miles Made at Dallas, Texas, by a Car That Had Already Gone 12,000 Miles

From the mere standpoint of gasoline mileage, Essex in its nation-wide tests showed a performance worthy of cars which possess that advantage as their principal quality.

Records were kept on 49 cars. They averaged 18.9 miles to the gallon.

But bear in mind this was not done by taking advantage of every device possible to increase gasoline mileage. Under conditions of that sort, Essex showed as high as 37 miles to the gallon. However, men don't drive that way. How obviously unfair it would be, therefore, to offer such carefully economized fuel mileage tests as typical of all Essex cars.

In the Essex tests, conditions and performances adverse to gasoline economy obtained.

These cars were being driven at speeds from 5 to 72 miles per hour. They were reeling off

thousands of miles over all sorts of roads in inter-city runs that set new time marks. They were making new hill-climb, acceleration and endurance records.

Many were owner cars—owner driven. Women piloted some.

Some of the Essex cars used had already traveled upwards of 30,000 to 35,000 miles.

So you must not view Essex economy merely by its gasoline consumption. You must also consider its endurance and reliability.

If there were nothing more striking about the Essex than its gasoline mileage, it would be a worthy subject of our advertising. But important and impressive as that fact is, does not its other qualities take first rank in your consideration?

Essex Motors, Detroit, U.S.A.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

Anyone who has been at the state fair on "the big day" and has tried to negotiate the grandstand at the tragic moment in the afternoon is reminded of the sights, the sounds, and the smells by a look at the cover. This scene shows only about half of one of the grandstands. There is another, nearly back of where the camera stands, of equal capacity, occupied even as to standing or sitting room as is this.

It is worth a trip to the fair to see the crowd.

ORGY OF LYING

After those farm bureau delegates had visited a few sections in California and had been lunched and dined a few times, Prof. Nourse of Iowa referred to "an orgy of competitive lying in which California shone." We do not recall much of the context other than that the speaker finally admitted that there was much of truth in our lying. As usual, the Californians' stories were substantiated by credible witnesses, all of which added to the brightness with which Californians shone. The trouble is with Easterners it takes them a long time to arrive at a full realization of California's conditions and opportunities

Here's hoping that Prof. Nourse returns to California and qualifies to enter the competition.

PRES. ROEDING'S DREAM

Our readers may recall that on the cover of the Cultivator of July 3 there appeared a photo from the model of the California fair grounds. This model was made out of the head of George Roeding and some of the other members of the board of directors. In other words it was a dream and the dream is coming true. The dream has to do with exhibition buildings and equipment for displaying California's agriculture. It will take some years to complete the dream but the one \$300,000 horticultural building, now practically in the center of the fair grounds, is an earnest of the things that are to be in other parts of the grounds. Designs or even the details of these buildings are already worked out by the architect and year by year steps will be taken which will work toward one completer whole.

We recall well our first visit to the state fair. It was in the days when the "grounds" were close in, in fact in what is now one of the denser populated portions of the city of Sacramento. The horticultural building was separated from the fair grounds and in the Capitol Park. The center of this horticultural building, or rather pavilion, was covered with tan bark and the elite of California gathered in the evening to see six-in-hands,

nia's 117,000 farms should give stronger support, both financially and morally, to a movement which will mean far closer cooperation, and cooperation spells success.

FAIRS

This is agricultural fair season. Two of California's county fairs have already been held and their story appeared last week and will appear this week in the Cultivator columns. About the time this paper will be received by our readers the California state fair will be opened at Sacramento. President Roeding, Secretary Paine, the whole board of directors, the whole clerical and working force have been working day and night getting ready for this, the big agricultural event of the state. We wish it were possible for every reader of the Cultivator to attend this fair. We will have several of our staff on the ground to tell us later of livestock, of implements and machinery, trucks and tractors, horticulture and field crops, manufactures, educational matters, activities of the state department of agriculture, commissions, and other activities and appliances which will be there represented. But no matter how great the abilities of these writers, nor how many of photographs the Cultivator camera shall be able to secure, we will still be unable to visualize—we will still be unable to give the full lessons which may be secured by personal inspection or examination of

OPEN TO ALL AND NO STRINGS

The columns of the California Cultivator are absolutely free and open to any farmer on the Pacific Coast, whether a subscriber or not, for the answering of any question pertaining to any branch of farming. These questions will be answered absolutely free of cost. If you are a subscriber and your neighbor who is not has some perplexing question to solve, have him send it to California Cultivator, 115½ North Broadway, Los Angeles, and the question or questions will be answered. No one will be required to sign any agreement or subscribe for the paper.

Why contract for information service? The California Cultivator gives it without strings.

four-in-hands, tandems, coaches and saddlers. The enclosure between the grandstand and the track, out at the grounds, was filled with almost as many bookmaking stands as there were people. The path around and under the grandstand to a bar, somewhere near a hundred feet long, combined with the bookmaking stands to give an appearance like unto that at Tia Juana of today. Them wuz the days of the ponies—and for a high old time. Today is the day of agriculture.

FINANCE THE BUREAU

While the visit of the delegates from the Middle Western states was made in California in order to secure information as to marketing of farm products it resulted also in bringing to California people an inspiration to more vigorous action along farm bureau lines. They were live people and they spoke of real live doings. For instance, California has succeeded in raising its annual dues of the members of the farm bureau from \$1 to \$2. Probably in doing this a few members have been lost. Illinois has raised membership dues from \$10 to \$15, while Iowa considers the cause and accomplishments, likewise the needs of the future, worthy the fee of \$25. These are days when it costs money to finance any large movement which means advancement. Leaders cannot secure results unless backed by hearty support of membership and by use of sufficient capital. Califor-

animal, implement or product. An agricultural fair is one of the most educational functions of our state, county or district institutions.

There are sensational features and stunts of various degrees of attractiveness which will draw thousands of pleasure seekers. We hope the thousands of knowledge seekers will outnumber them.

OTHER FAIRS

The state fair monopolizes much of the Cultivator space this week. The state fair, however, is not the only fair, in fact there are a great number of these educational events held in California this year. These vary from a one day combination picnic and farm products event to a full week of a "regular" fair. The dates and places of these events are given in another column of this issue. One of the newer ones to enter the field is San Fernando Valley. A fair is combined with a public sale event which will attract attention to that section.

The Southern California fair will be held at Riverside. Riverside is no novice. She has had several years' experience, and last year's showing of livestock, agricultural products, implements, farm power, art products and manufactures showed her to be entirely up to the minute in fair management.

And Fresno, almost in the exact center of California's great territory, and also, in the center of that rich San Joaquin Valley, will show of her rais-

ins, her livestock, her peaches and figs, in fact of all her agriculture in a more generous way than ever.

San Diego farm bureau will use liberally of the beautiful Balboa Park, site of the 1915 exposition, in the exhibit of the agriculture of that county.

Ventura County is getting ready as is Tulare, both of which have rich resources which will be gathered and shown.

Los Angeles is to have two great exhibits. One of livestock which will be gathered from all portions of the state and even from the Middle West and the Mountain states. The tractor, truck and farm implement people hold later at Verdugo Park a great exhibit under the auspices of the national association.

Every one of these events have great educational possibilities. The Cultivator will bring the lesson so far as possible and yet urges its readers to get the lessons at first hand.

Besides, over the Colorado at Phoenix, plans are in the making for a great state fair which will represent the products of a great portion of the Southwest. Various other agricultural counties are also working for an exhibit of their wares.

STATE FAIR NOTES

One of the slogans of the state fair will be "More Power on the Farm." More than \$500,000 worth of "Power on the Farm" machinery will be displayed at the California State Fair, by the California Tractor and Implement Association. In 1915 the Pacific Coast states as a whole had about 3000 tractors. There were about 23,200 on June 1, 1920. The movement has been so recent that most of them are still in operation. Tractors are not yet being scrapped.

It is announced by Superintendent of Exhibits Kavanagh of the state fair that all boys entering calves in the classes for special prizes, or in open competition, must act as their own herdsmen during the period of the fair. "The fundamental reason for awarding these prizes is that the young men may become proficient in the actual care and feeding of the animals," says Kavanagh.

In livestock there are over 2000 entries.

The judges in horticultural classes will be Dr. J. C. Whitten; L. B. Scott, formerly with the U. S. department of agriculture and now with the California Bud Selection Association; H. J. Eustace, professor of horticulture, Michigan Agricultural College; J. B. Fox, and W. S. Killingsworth.

The kennel show is to be one of the features during the dates of September 8, 9 and 10.

The state department of agriculture will feature a laboratory during fair week in which will be illustrated some of the methods employed in official testing.

The art gallery promises some exceptionally fine showings of great artists.

Auto economy run is one feature which will begin and end at the state fair.

The poultry show promises better than any former exhibit.

Agricultural Clubs Day will be Saturday, September 4.

Kern County will exhibit Pima cotton.

Horticultural commissioners will have charge of several county exhibits.

California cattlemen will meet September 8 on the state fair grounds in the counties' exhibit hall at 10 o'clock. Governor Steptens has been invited to speak, as have Director Hecke of the state department of agriculture, Judge Shields, President Bixby, Dr. Iverson, Dean Van Norman, Prof. Baldwin and Secretary Wilson of the agricultural legislative committee.

Walnuts and Markets

ARLYLE THORPE, general manager of the California Walnut Growers Association, is now in the East making a trade survey and gathering data which will be of value in the disposal of the 25,000 tons of walnuts which California will soon be harvesting. Mr. Thorpe sounds a word of warning that greatest care must be used in marketing these nuts and, further, in so shaping our national affairs that these industries may be guarded from great loss because of present international trade conditions. For instance, exchange rates between this country and all European countries are greatly in favor of America, that is, the American dollar is pre-eminent while the unit of value in the European countries has depreciated to a half, a fourth or possibly a tenth of face value.

We have spoken of lemons being at a disadvantage because the American dollar is worth practically \$4 in Italian money, while even in France it is worth nearly \$3, and France ships many a walnut to us. Mr. Thorpe estimates that more than 50,000,000

pounds of European walnuts have been laid down in Eastern markets during the past nine months, which is a greater quantity than any previous importations in any 12 month period. Mr. Thorpe says:

"Owing to the terrific break in foreign exchange Europeans are shoving practically all their walnuts into our markets where the dollar reigns supreme. The advantage they gain when the returns are changed into their money affords them a good profit despite the fact that they are offering their walnuts here at less than the actual cost of producing California walnuts.

"Unless a reasonable protective tariff is placed upon such importations to offset Europe's ridiculously low cost of production and the advantage she gains by reason of her lower standard of living, the California walnut industry may suffer a long period of unprofitable production. We may be forced to face such conditions as are causing California lemon growers to suffer heavy losses at present. They are compelled to dispose of the highly standardized California lemon in competition with the low grade lemon from Southern Europe. If this condi-

tion continues for long it will probably result in the grubbing out or budding over of many valuable lemon groves in Southern California.

"This country will make a grave mistake if it fails to give its horticultural interests suitable protection against such competition. It is a fact that during the war the fruit growers of Southern California strained every nerve to produce bumper crops with which to feed the world in an emergency, and unless such industry is given proper encouragement those who are engaged in it will become discouraged and quit the business, making the country largely dependent upon Europe which, it has been fully demonstrated, is not in a position to supply any considerable amount of food to outsiders, and only resorts to the sale of citrus fruits and walnuts in this country because it knows America has the ready money to buy products which cannot be marketed elsewhere to advantage.

"The gathering of this year's crop of California walnuts will begin about two weeks later than usual. The harvest, it is believed, will be in full swing early in October. The crop will amount to 80 or 85 per cent of last year's production, which broke all records. There will be approximately 46,000,000 pounds of high grade nuts. They are of better size than for several years. The quality is better than

usual. The meats are filling out with nice, light, plump kernels.

"It is thought that the bulk walnut pack will bring the growers from \$10,000,000 to \$13,000,000 and that from \$1,000,000 to \$2,000,000 will be derived from the sale of shelled walnuts meats and charcoal which is made from the shells. Barring the remote possibility of a heat wave and untimely rains, the present crop will mature in fine shape.

"Owing to the erratic condition of the market since the arrival of European walnuts in large quantities, many independent walnut buyers and brokers in this country have retired from the field, and there has been a regular landslide of walnut growers to membership in all the old cooperative associations as well as the five new cooperative associations which have been organized this year and affiliated with the California Walnut Growers Association. New associations have been organized at Simi and Santa Ana, in Santa Clara and Contra Costa Counties, and in the San Fernando Valley.

"Each of these new organizations will operate its own packing house this fall. Several hundred thousand dollars have been spent in recent months to modernize all of the association packing houses with the latest equipment so they can handle this year's harvest as fast as the nuts can be delivered, and in that way get the crop to market promptly. The new walnut packing house at Puente, which cost between \$175,000 and \$200,000, is a good example of the modern association plant. More than 80 per cent of this year's walnut production will be handled by the associated growers.

"It is the opinion of association officials that the handling of so large a percentage of the production under one management makes it possible to transact business more economically, sell the product at reasonable prices and at the same time return a greater sum of money to the producers. Attention is called to the fact that the California Walnut Growers Association, which at the beginning of the year adopted a new selling plan that does not guarantee the price for an entire year, but sells the crop subject to market fluctuations from day to day, has again pioneered in a new field, since the federal trade commission only a few days ago published a report on recent investigations, in which practically all changes in the Walnut Association's selling plan were recommended to other shippers of food products.

"The association is advised that the fact that it took the initiative in this move which is recognized by the federal authorities is likely to result in similar plans being adopted and followed by packers of food products in general. The new policy has been given the hearty endorsement of the National Wholesale Grocers Association, as well as that of the various district associations."

CANNERS ENCOURAGING AGRICULTURE

The canners of the country have united in a National Canners Association, and as one feature of the new organization have formed a bureau through which a study of the problems of farmer and truck grower will be made. The work of the new bureau will be largely research and investigation. It is planned to work as much as possible in cooperation with state and federal agencies engaged with the same problems. In this connection the bureau will serve as a means of bringing to the attention of the scientific leaders of the country problems connected with the production of canners crops. It is recognized that work already performed by state and federal agencies has been of great value to the industry.

In the bureau of raw products research, however, there will be a sort of central clearing house where the results of all investigation and research carried on throughout the country can be brought together and used to the advantage of those various sections of the industry which can use it most profitably.

San Diego County citrus growers, who accompanied the party of farm bureau members which toured Southern California citrus groves recently, report interesting and instructive trip.

Why You Can't Overwork An E-B Plowing Outfit

NEVER mind how hard the ground, or how hot the day, an E-B plowing outfit goes right on turning land, as many hours of the day as you want to drive it. What makes a plowing outfit as dependable as this? No one feature, nor for that matter, a dozen. Only the longest experience, under the widest variety of farming conditions—and then a manufacturing organization big enough and far-sighted enough to utilize all the lessons of that experience.

Sixty-eight years of implement making have taught us what is necessary for dependable service. A manufacturing organization of vast extent builds this knowledge into E-B plowing outfits.

A Complete Line of Farm Machinery Manufactured and Guaranteed by One Company

How Much Power Do You Need?

Don't underestimate your power needs. Don't try to do heavy tractive work with inadequate power. Overloading causes 60% of all upkeep expense. Eliminate that 60%. Buy a "Caterpillar" 75 Tractor—a machine with plenty of power for pulling an 11½-foot land leveler, the biggest size ground drive harvesters, a subsoiler or deep tillage plows, absolutely without danger or fear of overloading.

Remember that the extra big power of the "75" entails little additional first cost or operating expense and no extra labor or maintenance cost. Every week in the year there are times when you'll wish you had that extra power. *Play safe on power*, as well as on service, on durability, on performance—make your choice a tractor of proved performance—the "Caterpillar" 75 Tractor.

"Caterpillar" 75 Tractor stands first in power—it has become the standard machine for deep plowing, subsoiling, chiseling, leveling and other heavy work.

It stands first in economy, using less fuel and oil than other tractors of considerably less horsepower.

It stands first in accomplishment—results behind the drawbar. It is geared right—on direct drive it handles a big width of plows at the proper plowing speed.

It stands first in accessibility—a more important advantage than most people realize, for in the course of a year it means a considerable saving of the time necessary for cleaning, oiling, adjusting, etc.

"Caterpillar" 75 Tractor works on any ground surface without power-loss due to slippage. It turns as short as the implements can follow. Its durability is proved by the fact that the first "75s" built, seven years ago, are still in successful service. It is backed by *real* factory service, that insures success and eliminates delays in the field. It is built better, especially since the adoption of rigid Government standards during the war, than any other tractor.

You can get immediate delivery of a "Caterpillar" 75 Tractor if you place your order without delay. Buy now and be equipped to do your work properly, economically, quickly.

Remember This—
"Caterpillar" 75 Tractor
Is by Far the
Most Powerful Tractor
on the Market Today

The "45"

The "45" is a big tractor in power and capacity for work—a small tractor in its ability to do the light power jobs economically and to work in orchards; small, irregular shaped fields, etc. There's a special low-built, shield-protected model for orchard work that every orchardist should investigate.

"Caterpillar" Disc Plows

The "Caterpillar" Disc Plow is adaptable to every kind and condition of plowing—extra deep plowing, soft land, Bermuda grass, side-hills—convertible into a moldboard plow if desired. The only four wheel plow built. The only plow that positively overcomes side draft. Plows any width without running the tractor on plowed ground. Besides all these features it has the strength and durability that eliminate breakdowns and delays in the field.

"Caterpillar" Land Levelers

Here is a tool that will do your leveling at minimum cost and in just the way you want it done. It's as simple as an anvil, as easy to handle as a wheelbarrow. It will pay a big dividend in your own work and is highly profitable equipment for contract work.

Get Your AVERY Now for Fall and Winter Work

Get your Avery Tractor NOW when it can give you the most valuable service in your fall and winter work. Avery owners use their machines the whole year around—winter as well as summer. Think of the belt work you could do with your own Avery on the job. Not only get your fall plowing, discing and seeding done on time, but fill your silo, saw wood, grind feed and do other jobs. The extra work you can get done with an Avery Tractor this fall and winter will help to pay for a big share of its cost. Now is the time to get it.

You can get an Avery Tractor outfit to exactly fit your size farm or the kind of power work you have to do. Avery Tractors in sizes from 8-16 to 40-80 H. P. are built with the famous Avery "Draft - Horse" Motors and "Direct - Drive" Transmissions. They have Renewable Cylinder Walls, Adjustable Crankshaft Bearings, Gasifiers which turn kerosene into gas and burn it all, and other features which enable Avery Tractors to give unusual service.

There are also two small sizes of Avery Tractors, 6-cylinder model "C" and 5-10 H. P. model "B." Ask for special circulars describing these machines or

Write for the Avery Catalog

Also learn about Avery Roller-Bearing Thrashers and Silo Fillers, Avery Motor Cultivators, Avery "Self - Lift" Plows, "Self - Adjusting" Tractor Disc Harrow and other Avery Tractor-operated machines.

A NEW WRINKLE IN PRUNES

By Ernest Branton

MORE than 600 prune orchardists gathered at the A. R. McClay Ranch five miles from San Jose on August 26 to witness a practical demonstration of an electric prune picker. This device works on the same principle as a Chinese endless chain bucket pump, except the "buckets" are canvas pockets on an endless canvas belt. The picker is light and easily handled by a ten year old child. The operating power is electricity, but as Mr. McClay is a mile or more from a feed wire the "juice" was furnished by a portable Delco light machine recently purchased for home and orchard use.

The writer asked at least 40 visitors as to their opinion of the merits of the picker and they were unanimous in the statement that in its present state it was not an improvement over hand picking so far as cost is con-

Prune Picker In Action

Ten year old girls operating a couple of the Hurd electric prune pickers. Lower picture shows more of detail of the cups on the carrier which takes each prune to the bag or bucket.

cerned. But not all were pessimistic over its future. Said one: "We made much fun of the first automobile, a little coughing, wheezing, shaky inefficient machine, but look at the latest. This picker needs improvement but the fundamental principle is a good one and should not be lost sight of. We need improved methods for harvesting prunes."

At present the machine picks up but one prune at a time and the operator has to touch the nose of the machine to each one. One could do it as quickly by hand if young and alert. It may, however, save many a back from aching, for the operator stands upright, the machine is light, and the prune is picked from the ground and elevated by electricity. From the upper end it drops through a canvas spout or guide into a bucket fastened by straps to the leg of the operator. While not a great success it may be the forerunner of a valuable labor saver.

Pear Growers:

Pear Blight has destroyed millions of dollars in property values, and is a standing menace to every pear orchard.

Scientists believe no district is PERMANENTLY immune — that sooner or later it is likely to appear in EVERY pear orchard, as conditions occur favorable to its development.

They are convinced—after 140 years' study — that ABSOLUTE PREVENTION of blight is not possible so long as we grow our present varieties, which belong to the blight-susceptible European species.

Some species of Asiatic pears are wonderfully resistant to blight. In the GREATEST SCIENTIFIC EXPERIMENT in blight-resistance ever conducted, Dr. F. C. Reimer, of the Oregon agricultural college, proved beyond question that the species *Usuriensis* (first discovered growing along the Usuri river in eastern Manchuria) was MORE RESISTANT TO BLIGHT than any other known.

Scientific investigators agree that the MOST PRACTICAL SOLUTION of the blight problem is to plant our orchards to trees whose roots, trunk, and main-limb crotches shall consist of a species practically blight proof, budding or grafting the branches with our commercial varieties.

Seedlings of cultivated types of *pyrus Usuriensis* are ideal for this purpose, being extremely vigorous, forming a well-branched, round-headed tree, and making good union with our commercial varieties. When budded or grafted in the branches, BLIGHT DANGER IS ELIMINATED below the point of union.

Such trees will double the value of pear orchards; blight control will be simplified; and the great expense and loss incidental to blight infection in the roots, trunk, and crotches, will be saved. We are so sure of this that we agree to REFUND THE PURCHASE PRICE of any such tree if killed by blight within ten years. This is LIFE INSURANCE for your orchard—something no nurseryman ever offered before.

Many of the leaders in California pear growing are planting our seedlings in orchard rows — husky, "stocky" trees, 3 to 6 feet high—and will top-work them next season to Bartlett, etc. This practice will effect a substantial saving over the price of similar trees nursery grown, and has the sanction of the best authorities. We follow this method in our own orchard and will plant ten thousand seedlings in orchard rows next spring.

Unfortunately, owing to frequent failure of the Chinese pear crop from frost, the seed supply is irregular; and we do not know when we can again offer seedlings when this season's supply is exhausted. For this reason the man who cares enough for his pear orchard to wish to make it one of the best, and who wishes the GREATEST MEASURE OF BLIGHT-PROTECTION that scientific men have devised after 140 years' study of this disease, will need no urging on our part to prompt him to at once make sure that his order is booked before our limited supply is sold.

The price: \$40.00 per 100, straight; less than 100, 50c per tree; no orders accepted for less than 10.

Considering all essential points—affinity for the commercial varieties, vigor, shapeliness, habit of growth, etc.—we believe *Usuriensis* seedlings are incomparably superior to any other pear stocks now in use, and that their use in connection with top-working as recommended constitutes the most important advance in American horticultural methods for more than a century, so far as pear growing is concerned.

Loma Rica Nursery

Pear Specialists

A. L. Wisker, Mgr. Grass Valley, Cal.

NOTE.—All pear men, whether planting this season or not, who are interested in the subject and who will send their address, will be sent free a copy of a bulletin on blight-resistant stocks which we shall publish this fall. We still have a small stock of pears in usual varieties on Jap root, and a few apples; sold on all other stock.

HYDROCYANIC ACID GAS GENERATOR

James W. Van Meter of New York, inventor of a chlorocyanic gas process, has been in California conducting a series of tests in tree fumigation. The apparatus used consists of a retort containing sodium cyanide mixture in one chamber underneath which is a capillary moisture and chlorine diffuser. Chlorine gas under pressure from cylinder enters retort at base and becomes charged with moisture in passing through diffuser. The intense heat developed by the chemical reaction of the moist chlorine and sodium cyanide mixture rapidly liberates the cyanogen from the latter in the form of chlorocyanic gas. Mr. Van Meter asserts that this manner of generating the gas lessens danger of injury to humans for there is no handling in the field of the liquid or

New Method of Daylight Fumigation

Inventor Van Meter standing behind the tank of liquid chlorine with small generator on ground underneath tripod. One feature making for safety in the use of this appliance is the smoke or cloud of gas which gives warning and lessens danger to humans.

other chemicals. The illustration shows the compactness of the apparatus with its automatic register of amount of gas used. The inventor adds:

"If chlorocyanic gas in tree fumigation be used with an excess of chlorine, the chlorine by its gravity will remain at the base of the tree, killing all insects that may have fallen and at the same time destroying all detrimental vegetation around the base.

"For underground fumigation and animal extermination chlorocyanic gas is used with an excess of chlorine. The chlorine by its gravity acts as the distributing agent or medium carrying with it to the lowest depth the deadly cyanogen."

This process, due to Mr. Van Meter's ability as a manufacturing chemist, has been given thorough test by the Argentine Republic in destroying many agricultural pests, and its success there has induced the Justinian Caire Company to introduce it to the Pacific Coast, though it is not at present on the market.

NATIONAL TRACTOR SHOW

Recognition of the National Tractor and Implement Show to be held September 20 to 26 at Verdugo Woodlands, Glendale, has been received from many official sources. Several days ago the commercial board of Los Angeles placed itself on record as solidly behind the show, making one more influential body of men to boost for the first agricultural exhibition of national scope to be held on the Pacific Coast. The show will be held under the immediate auspices of the Tractor and Implement Dealers Association of Southern California, and has also the endorsement of the California Tractor and Implement Association of San Francisco, the Portland Tractor and Implement Association and the Northwest Tractor and Power Farming Association. It is sanctioned by the National Implement and Vehicle Association, the big parent organization of the prominent manufacturers

of implements and vehicles throughout the United States.

The big feature of unusual interest is the bringing together of all the well known makes and models of modern farm machinery, exhibited to best advantage, giving the prospective purchaser opportunity to compare at close range the various makes. The show will be in every sense a practical business show for busy farmers. There is every reason why the National Tractor and Implement Show of the West should prove to be the huge success that is anticipated. In the past tractor shows of great success have been held in Kansas City under the active direction of Guy H. Hall, the man who is at the helm in the Western show and who has been very actively on the ground for several weeks.

The many changing conditions in agriculture and the manufacture of equipment have definitely confirmed the need for such exhibitions. This need has increased steadily with the rise of new angles in scientific agriculture and the increasing demand for better and more versatile and adapt-

able equipment. The National Tractor and Implement Show of the West will be a monster exhibition which no farmer or implement man can afford to miss.

ORANGE COUNTY FAIR

One of the interesting exhibitions of Southern California's farm produce will be the Orange County fair to be held at Huntington Beach October 7-9. Orange County is famous for her diversified production, raising nearly everything under the sun, and the 1920 fair will undoubtedly show excellent samples of the staples as well as the rare in fruits and vegetables. Walnuts, oranges (Valencias), lemons, apples and other fruits will be shown, along with all the other county products, oil, sugar beets, avocados, beans, persimmons, potatoes, etc. The women will have a chance to show their canning, preserving and baking art. The poultry department will be unusually large, and one of the four large tents will be devoted to auto, truck, tractor and accessories displays.

D. W. McDannald, Orange County's

publicity man at the Los Angeles chamber of commerce, who arranged the county's exhibit at the Riverside fair last year, will assist in procuring and placing exhibits for the fair at Huntington Beach.—Wayne Goble.

PHYLLOXERA SURVEY

R. L. Nougaret, viticulturist with the state department of agriculture, is making a survey of vineyards of Fresno County. The survey consists in determining as to which areas are infested with phylloxera. Later a bulletin will be issued, showing by means of maps the correlation which exists between phylloxera infestation and different types of soil.

The acting secretary of agriculture has signed the pink bollworm of cotton quarantine, applicable to Louisiana and Texas. It is effective August 1. The operation of the quarantine is restricted to areas known to be infested or suspected of possible infestation, but this restriction is conditioned upon enforcement by the states concerned of certain necessary control measures.

Alfalfa Bulletin

Dr. W. P. Kelley's investigations in alkali waters and alkali soils is briefly summarized in Circular No. 219 of the agricultural experiment station, college of agriculture, Berkeley. This is from the address delivered before the annual conference of farm advisers last March. The summary of the bulletin is:

Drainage, especially if it be accompanied by flooding, is a reasonably successful means of removing white alkali from soils. Other things being equal, the degree of success will depend upon the readiness with which the water penetrates into and percolates through the soil mass.

If large amounts of black alkali occur ordinary drainage will probably not restore the land to a state where crops will succeed unless the black alkali first be neutralized in the soil mass. As yet we have not found an economical means of neutralizing large amounts of black alkali, especially where it occurs in the subsoil. Consequently we are not ready to make definite recommendations concerning this point. In other words, ordinary drainage, even when accompanied by flooding, cannot be relied upon to remove black alkali. This should not be interpreted to mean,

however, that we do not believe in drainage as an important step in the reclamation of white alkali land where the water table is high, or as a means of lowering the water table.

Lands containing only comparatively small amounts of black alkali, especially if the black alkali occurs mainly in the first foot of the soil, can probably be successfully reclaimed by drainage, provided an application of gypsum also be made. However, unless an application of gypsum be made, or some other agent producing similar effects, the probabilities of success with such soils are not assuring.

With such soils as occur on the Kearney ranch and probably with loams and clays generally, we believe it desirable, in fact frequently necessary, to apply some such material as gypsum before flooding, even though black alkali be practically absent. This is for the reason that a very poor physical condition is likely to be produced as a result of the leaching. The soil may become highly colloidal and deflocculated, with the resulting loss of tilth and the production of unfavorable condition for the growth of crops generally. Gypsum will tend to flocculate the soil. In

some cases it may even be necessary to make an application of manure or some other organic material following the flooding as a means of building up the soil.

Drainage, as a means of preventing the accumulation of alkali in the first

place, is advisable wherever the water table is rising. Artificial drainage, if properly planned and installed, will largely prevent the further spread of alkali.

Tile drains, if properly planned and installed, undoubtedly afford a successful means of lowering the water table.

Motor Trucks Are Time Savers

By N. C. Wilson

IN hauling materials to and from farms trucks save from one-half to two-thirds of the time required for horses and wagons to do the same work, according to the California Tractor and Implement Association.

About one-fourth of the time farmers have return loads for their trucks.

Horses are still used by the majority of the farmers in the United States, for some road hauling. About one-fourth of the men use their trucks to do some custom hauling.

The roads on which three-fourths of the trucks travel are all or part dirt. During about eight weeks of the year these roads are in such a poor condition owing to mud and snow that trucks cannot be used.

Since purchasing trucks about one-fourth of the farmers have changed their markets for either all or part of their produce. Where the average distance to the old market was seven miles, it is usually 20 miles to the new market.

According to findings of the U. S. department of agriculture, it is estimated that on the average trucks travel 3820 miles per year and are used during 173 days each year.

Depreciation is the greatest expense in connection with the operation of a truck, during the six and a half or seven years it is used.

Most of the owners of trucks larger than one ton prefer solid tires. The owners of one-half and three-fourths ton trucks usually prefer pneumatic tires. Owners of one ton trucks are about evenly divided in their preference.

When the report was being made two-thirds of the owners stated that they had not lost any appreciable time during the year on account of motor and tire trouble, breakage, etc. About one truck out of 30 had been out of commission ten days or more.

The average cost per mile for the operation of the one-half ton trucks was about 8 cents; of the three-fourths ton trucks, 13 cents; of the one ton about 12 cents; of the one and one-fourth ton, about 19 cents; and of the two ton, about 20 cents.

Valuing the driver's time at 50 cents an hour, the average cost of hauling crops was about 50 cents per ton mile with the half ton trucks, 34 cents with the three-fourths ton, 26 cents with the one ton, 24 cents with the one and one-fourth ton and one and half ton trucks, and 18 cents with the two ton trucks.

Four-fifths of the farmers using trucks estimate that they decrease the expenses for hired help. This decrease amounts on the average to \$324 per year.

On more than half of the farms of the 205 truck owners, whose farms contain more than 120 crop acres, there are tractors. Farms of corresponding size, where only trucks are owned, keep only slightly more work stock than is kept on the farms where both trucks and tractors are used.

BARLEY DISEASE IN COLORADO

Reports received by the Colorado agricultural college indicate that a serious disease of barley is becoming very prevalent in that state.

This disease is known as barley stripe and is caused by a fungus which lives over the winter on the seed. The plants may be affected at any stage of their growth from the young seedling to the almost mature plant. Affected leaves show yellowish to straw colored longitudinal stripes. The stems are also usually affected. The tissues in the stripe soon die, frequently resulting in the lengthwise splitting of the plants. Later the stripes commonly have brown margins. At or just following heading time entire affected plants may die, and following a heavy dew may become dark ashy gray from the abundance of spores produced over the surface. Often as high as 25 per cent of the plants in a field may be killed by this disease.

There is no remedy for this disease after the seeds have been planted, but experiments have shown that the disease may be largely prevented by treating the seed with formaldehyde solution of one pint to 40 gallons. The seed should be soaked in this solution for two hours and then allowed to dry. The seed should be planted as soon as sufficiently dry to pass through the drill.

Delivering full Power from Your Fordson

The supreme duty of the tractor belt for your Fordson is to deliver in the greatest degree the *full* power of the tractor motor to the belt machine.

A considerable wastage of power through slippage, often leads the Fordson owner to imagine his tractor is not developing its rated horse-power. But the Little Giant tractor belt, because it eliminates all this wastage, has been specially designed for the Fordson.

First, it is designed to maintain a clinging grip on the pulley, because the slip-proof belt not only prevents loss of power through slippage, but also the serious wear to the belt that slipping causes.

Second, it is built to withstand the effects of rain, snow, heat, cold and the abuse that every farm tractor belt must meet.

It is an endless canvas belt, made of four folds of a single piece of highest grade, heaviest weight canvas duck, stitched as a belt has never been stitched before, and specially treated to give increased toughness and wearability. Double stitching at the edges, an exclusive feature of this belt, eliminates edge wear.

Your Fordson dealer has a stock of Little Giant belts in three lengths—50 ft., 75 ft. and 100 ft. If you are buying a Fordson, get a Little Giant belt at the same time—if you are now a Fordson owner, insure your tractor's maximum performance on the belt by using a Little Giant.

MOLINE

The Universal Tractor

3-2 Plow
Capacity

The Moline is unique in the tractor field—made so by our patent protection.

It is the correct farm power unit, doing all belt and field work, including cultivation, with one man.

Engineering and manufacturing development of the Moline Tractor and Moline Tractor Plows enable us to announce a 3-2 Plow for use with the Moline Tractor.

3 plows for ordinary conditions which prevail in most sections of the country.

2 plows for extreme conditions and unfavorable seasons.

An average saving of 4.7 horses per farm, and a total average saving of \$1,408.16 per year, is reported by yearly Moline tractor performance records received from owners to date. We will be glad to give anyone interested the opportunity to personally inspect these records.

If desired you can use the "drag behind" or horse drawn implements you now have with the Moline Tractor the same as with other types of tractors.

GOMBAULT'S CAUSTIC BALSAM

THE STANDARD REMEDY
HUMAN and VETERINARY

It is generally true that an external remedy that is good for the animal is also good for the human body, and Gombault's Caustic Balsam is no exception to this rule. The many testimonials received from physicians and veterinarians are convincing proof of its merits. Rheumatism, Backache, Neuralgia, Sprains, Strains, Lumbago, Sore Throat, Stiff Joints, in fact any ailment requiring an external application can be treated with absolute safety and the beneficial results produced are all that could be desired.

Soothing and Healing--A Perfect Antiseptic

As a veterinary remedy its curative qualities have been acknowledged for many years in cases of Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Spavin, Ringbone and other bony tumors. A trial will convince anyone that here is a remedy without an equal. Write for any information desired. \$1.75 per bottle at druggists or sent by parcel post on receipt of price.

The Fair That Came Back

LAST week the agricultural and livestock interests of Sonoma County, led by J. Francis O'Connor, president, and H. J. Waters, secretary of the Sonoma County Fair Association, set a stiff pace for other county fairs to follow. This was the first fair held in that county in five years and the vigor with which the comeback was staged resulted in a decidedly creditable showing in all departments.

The success of the event demonstrates what can be accomplished by well directed effort and, further, it was proof positive that "where there is a will, there is a way." Really the story back of the fair is as well worth the telling as the story of the show itself.

Years ago the Sonoma County fair was rated one of the best in California. That was in the days when folks went to the fair to see the races. The management of the old fair built almost a model plant. One of the best combination mile and half mile tracks was constructed; permanent buildings were erected and the entire grounds were beautified with cypress plantings. Good horses came and good races were staged. Finally interest dwindled in the racing game and after 1916 the fair was abandoned.

During the last four years there has been a marked growth in the number of pure bred breeding establishments in and around Santa Rosa. One of the leading men in the development of the pure bred business of the community has been J. Francis O'Connor. O'Connor early set about encouraging the youngsters of the community to become members of pig clubs and made it possible for all who might be interested to secure one or more pure bred pigs. Because of his enthusiasm other breeders put their shoulders to the wheel and worked for a better class of Sonoma County livestock. It was to be expected that such general enthusiasm would end with a demand for an annual fair where could be shown in a practical way the accumulated accomplishments of the local breeders.

A fair was needed. When the matter was taken up with those who should be interested the proposition met with little encouragement. The fair spirit was dead. Now O'Connor happens to be the type of man who glories in doing the things that "can't be done." He knew they had the plant to use; he knew that there was a quickened interest in better agriculture and livestock and he knew that a fair could be held if the right men could be interested. No time was lost in locating those men, and good fortune guided their selection of H. J. Waters as secretary. O'Connor and Waters were the team.

The next big problem was to finance the fair. It was financed on a three year basis, with a third of the amount pledged callable each year. With the plant provided and a plan of financing in operation the next big thing was to develop public sentiment to the point where considerable money could be counted on from the advance sale of season tickets. To put across the sale of tickets the management hit on the plan of placing the sale in the hands of children of the community with several prizes as rewards. The two leading prizes offered were Shetland ponies, and the fact that over \$10,000 worth of tickets were sold before the gates opened is evidence that the plan worked.

Another source of income was from the concessions. Effort was made to sell all the concession space available. Aside from "The Valley," the term applied to the midway, over 120 commercial firms were sold sufficient space to leave a net profit of \$3500 to the fair association after paying for the exhibit tents.

The fair management then went after livestock exhibitors. They entertained no plan to confine the exhibitors to the local community—the fair was open to the world and that fact was made plain. The fact that the fair came just before the state fair at Sacramento materially aided the management in attracting a number of the best herds and flocks in this state.

The fair opened on time with all details arranged and for eight days it proceeded with a smoothness that

would do credit to many of the older established fairs and shows. Every one in the county came once or twice; every one helped in whatever way they could and every one had a good time, was satisfied and went home happy.

Each day was provided with a fine racing card, rodeo stunts, aeroplane flying and automobile racing. Each evening of the week was given over to a night horse show. This last named feature proved an exceptionally attractive event and included the leading stables of this state that were induced to stop over at Santa Rosa on their way to the state fair at Sacramento.

Practically all the farm bureaus of the county took active part in the fair and were represented by splendid exhibits. The Annapolis center won first place, Cinnabar second and Occidental third. Other districts represented were: Bennett Valley, Bodega Valley Ford, Porter Creek, Kenwood, Rincon, Olivet and Kellogg.

The horticultural and agricultural exhibits were mostly included in the showings made by the various centers. During the week a dahlia show was held.

The livestock show was easily the feature of the fair. Every available stall was crowded with the best of the county. Nearly all the important breeds were represented with more or less strength, and in the stalls and pens were many exhibits that will be seen at Sacramento.

CATTLE

The showing of dairy cattle was especially creditable. Holsteins led in point of numbers and Guernseys and Ayrshires followed closely. Only a few Jerseys were on exhibit. A feature of the dairy division was the splendid exhibit of Milking Shorthorns.

The Shorthorns were declared by the judge, Roy A. Cook of Iowa, who is secretary of the Milking Shorthorn Association, to be the equal in quality of any that he had seen this year. The class for aged cows was especially strong.

The awards follow:

Milking Shorthorns

Aged bulls—1, John Lynch Ranch, Petaluma, on Oxford Duke 2d.

Senior yearling—1, Thomas Harrison, Santa Rosa, on Count Tickford.

Junior yearling—1, Lynch, on Frantic Royal Type; 2, H. H. Doane, Rincon Valley, on Santa Rosa Type.

Senior calf—1, Harrison, on Santa Rosa Pioneer; 2, William Bond, Newark, on Golden Type.

Junior calf—1, Harrison, on Santa Rosa Victor; 2, Harrison, on Frantic Pioneer.

Senior champion Lynch, on Oxford Duke 2nd; junior and grand champion, Harrison, on Count Tickford.

Aged cow—1, 2 and 3, Harrison, on Floretta Clay, Naomi 2d and Bess Borough Curlew.

Two years old and under three—1, 2 and 3, Harrison on Vocalist, Welfare Belle and Welfare Naomi.

Senior yearling—1, Harrison, on Santa Rosa Queen; 2, Harrison, on Helarite; 3, Bond, on Cumberland Goldie.

Junior yearling—1, R. Heckley, Santa Rosa, on Frantic Maid; 2, G. W. Heckley, Santa Rosa, on Cumberland Jewel.

Senior calf—1 and 2, Harrison, on Dolores Lee and Diana Lee 2nd.

Junior calf—1 and 2, R. Heckley, on Frantic Belle and Rosa Lee.

Senior and grand champion, Harrison on Floretta Clay; junior champion, Harrison on Santa Rosa Queen.

Calf herd—1, Harrison; get of sire—1, Harrison; produce of dam—1, Harrison; 2, Bond; 3, G. W. Heckley.

Holstein-Frisian

Aged bull—1, J. W. Scudder, Escalon, on Model Domino Glista; 2, W. P. McAlpine, Santa Rosa, on unnamed.

Two year old bull—1, Mrs. E. M. Holje, Calistoga, on King Morco Alcartra 17th.

Senior yearling bull—1, Holje, on Holje Alcartra Aralla Segis.

Junior yearling bull—1, George A. Smith, Corcoran, on Korndyke Pontiac Valdessa; 2, Scudder, on Pontiac Segis Abbecker; 3, Smith, on Korndyke Colantha Pontiac.

Senior bull calf—1, 2 and 3, Smith, on Prince Hengerveld Butter Boy, Admiral De Kol Pontiac and Count Korndyke Rag Apple.

Junior bull calf—1, Holje, on unnamed; 2, Smith, on King Netherland Segis; 3, Scudder, on Commodore Stockton.

Senior and grand champion, Scudder, on Model Domino Glista; reserve senior champion, Holje, on King Morco Alcartra 17th; junior champion and reserve grand champion, Smith, on Korndyke Pontiac Valdessa; reserve junior champion, Holje, on Holje Alcartra Aralla Segis.

Aged cow—1, Scudder, on Riverview Pontiac Korndyke.

Two year old cow—1, Scudder, on Manteca Pontiac.

Senior yearling heifer—1, Scudder, on Manteca Honolulu Baby De Kol.

Junior yearling heifer—1, Holje, on

Golden Glen Jerseys

60 Registered Females in Herd

At our Golden Glen Stock Farm headquarters we are building up a herd of well bred high-testing Jerseys under ideal ranch conditions.

Twelve cows now on official test; all cows to go on test at freshening time.

Visitors welcome always. See herd at Riverside, October 13-19.

Geo. W. Thomas & Sons

Arlington, Cal.

*Simplex Silos
Are Scientifically Correct*

SAN FRANCISCO.—Tilly Alcartra, the wonder cow belonging to A. W. Morris & Sons, Woodland, California, had luncheon at the Palace Hotel. Tilly's regular diet consists of ensilage cut by a Papec Ensilage Cutter.

In order to properly feed their valuable stock A. W. Morris & Sons required the highest quality of ensilage — cut exactly at the right time. They needed an ensilage cutter—one that was efficient, capable and dependable.

So they investigated, found out about ensilage cutters, compared one make with another, and finally chose a Papec.

The solid semi-steel frame of the Papec—the low up-keep — the minimum power upon which it operates—its cutting capacity, 3 to 10 ton per hour—the six fans on the cutting wheel which prevent clogging in the pipe—these were some of the reasons why A. W. Morris & Sons selected a Papec.

We do not, however, ask you to accept their judgment. Find out about the Papec. Compare it with other ensilage cutters. Really make this fair test, and decide for yourself.

Not a night without Not an hour without **DELCO-LIGHT**

Farm life in this country is bright and independent as never before. Electricity for every farm has struck off the shackles of drudgery.

DELCO-LIGHT is acknowledged as the most helpful single factor in establishing better living conditions in rural homes. It takes the darkness out of night-time—fills every hour with power.

So DELCO-LIGHT through its widespread distribution of economical and dependable light and power, has become a national farm institution.

More than 100,000 farmer users of DELCO-LIGHT to-day enjoy the advantages of an individually-owned and mechanically complete electric light and power plant.

Three thousand DELCO-LIGHT plants are installed on the Pacific Coast alone. They are furnishing a constant and economical light and power supply to their delighted owners.

Why not put a DELCO-LIGHT plant in YOUR home this fall? Let us prove to you how it will pay for itself in safety from fire hazards—in essential conveniences—in labor saved.

You owe it to yourself to study the message proclaimed by more than 100,000 satisfied users of DELCO-LIGHT. "YOU, too,"—so the message runs—"should enjoy the advantages of DELCO-LIGHT."

As they have proved for themselves, so can you—before you buy—demonstrate that DELCO-LIGHT operates best on kerosene at a cost of a few cents a day—and kerosene is the cheapest fuel on the market.

You, too, can watch any member of your household pull the starting lever on the air-cooled engine and see real service begin. Because of its fool-proof features, DELCO-LIGHT will continue its dependable service for a life time.

DELCO-LIGHT is an invaluable helper in both man's and woman's work. Besides it fills the farmhouse and outbuildings at all times with brilliant but cheaply-produced light.

There's no knocking off of chores because of darkness if your farm is DELCO-LIGHTED. High wages for farm help drag less heavily on DELCO-LIGHT owners. The hired man works cheerfully and longer under DELCO-LIGHT.

There's a Satisfied User Near You

DELCO-LIGHT plants are made in sizes to meet your every need. Whatever the light and power requirements of your house and outbuildings, there's a DELCO-LIGHT unit of just the right size to deliver most economical and dependable service.

Rose; 2, O'Connor, on Dorothea's Broadie of Castlevlew.
 Senior heifer calf—1, O'Connor, on Princess Patricia of Castlevlew.
 Junior heifer calf—1 and 2, Humphrey, on Escalon Marjorie and Escalon Golden Anne.
 Senior and grand champion, Humphrey, on Escalon Evangeline; junior and reserve grand champion, Humphrey, on Escalon Lassie; reserve junior champion, Humphrey, on Escalon Daisy.
 Aged herd—1, Humphrey; breeder's young herd—1, Humphrey; calf herd—1, Humphrey; get of sire—1, Humphrey; produce of dam—1, Humphrey.

Jerseys

Senior yearling bull—1, Maj. C. L. Tilden, Cazcerdero, on Sans Aloï Golden Fox.
 Two year old bull—1, M. A. Luce, Santa Rosa, on Quiglenook Loss King.
 Senior bull calf—1, Mathias Rogina, Santa Rosa, on Dairy Maid's Prince; 2, E. C. Rand, Santa Rosa, on Gordon of Brae Brawn.
 Senior and grand champion, Luce, on Quiglenook Loss King; junior and reserve grand champion, Tilden, on Sans Aloï Golden Fox; reserve junior champion, Rogina, on Dairy Maid's Prince.

Ayrshires

All Ayrshire awards went to the Steybrac herd owned by E. B. McFarland, San Mateo.

Professor C. W. Rubel of the University of California judged the dairy cattle classes.

While the showing of the beef breeds was not so extensive as had been expected there was nevertheless an attractive display. The William Bond herd of Shorthorns, on their way to Sacramento, walked off with the principal winnings. Chas. Rule of Duncan's Mills, had the only exhibit

of Herefords. Senator B. F. Rush of Suisun rated the beef classes.

SWINE

The local Berkshire breeders were out in force and had by far the largest exhibit in the swine division. Two of the leading herds of the state, those of A. B. Humphrey of Escalon and J. Francis O'Connor of Santa Rosa measured strength and divided honors. These established breeders did not have clear sailing in all classes as they were forced to meet a number of new breeders. Especial interest centered in the junior yearling sow class which was won by an entry owned by Mrs. J. G. Throckmorton of Sebastopol with an entry that she secured at a recent Berkshire sale.

The awards follow:

Aged boar—1, F. J. Kindle, Santa Rosa, on Castlevlew Baron; 2, C. W. Schwartz, Calistoga, on unnamed; 3, W. P. Hinshaw, Petaluma, on Hinshaw Rookwood.
 Senior yearling boar—1, J. Francis O'Connor, Santa Rosa, on Enhancer; 2, A. B. Humphrey, Escalon, on Escalon Type.
 Junior yearling boar—1, Humphrey, on Escalon Big Joe.
 Senior boar pig—1 and 2, Humphrey, on May's Superb and Escalon Model Leader; 3, J. G. Throckmorton, Sebastopol, on Goldridge Duke.
 Junior boar pig—1, Humphrey, on Grape Wild Champion; 2, O'Connor, on Castlevlew Achiever; 3, Charles Walten-spiel, Santa Rosa.
 Senior and grand champion, O'Connor on Enhancer; reserve senior and grand champion, Humphrey on Escalon Big Joe; junior champion, Humphrey on May's

Superb; reserve junior champion, Humphrey on Grape Wild Champion.

Aged sow—1, Humphrey, on Grape-wild Rose; 2, Throckmorton, on Princess May 11th; 3, Kindle, on Castlevlew Lustre 2nd.

Senior yearling sow—1, Humphrey, on Grapewild Rose.

Junior yearling sow—1, Mrs. J. G. Throckmorton, on Castlevlew Rival Lady; 2, Humphrey, on Grapewild Rose 13th; 3, Logan Bishop, Santa Rosa, on Leader's Rival Lady.

Senior sow pig—1, Humphrey, on Escalon Belle 5th; 2, Throckmorton, on Lustre Girl 6th; 3, O'Connor, on Castlevlew Achiever.

Junior sow pig—1, O'Connor, on Achiever Rival Duchess; 2 and 2, Humphrey, on Grapewild Rose 21st and Grapewild Rose 19th.

Senior and grand champion, Humphrey on Grapewild Rose 6th; reserve senior and reserve grand champion, Humphrey on Grapewild Rose; junior champion, Humphrey on Escalon Belle; reserve junior champion, O'Connor on Achiever Rival Duchess.

Aged herd—1, Humphrey; 2, Kindle; under year herd—1, Humphrey; 2, Throckmorton; 3, O'Connor.

Get of sire—1, Humphrey; 2, Throckmorton; 3, O'Connor.

Produce of sow—1, Humphrey; 2, Throckmorton; 3, O'Connor.

Pen of barrows—1, Humphrey.

Sow and litter—1, E. Grant Hillis, Sebastopol; 2, Stanley Carrothers; 3, Marvin Johnson.

Harvey Berglund had things his own way in the older Duroc-Jersey swine classes, but in the younger stuff Leo Schoningh, Desmond Praltzel and Carleton Coffey, all of Petaluma Pig Club, ran in some pigs that came out with their share of the awards, Coffey coming out with the junior championship.

Junior yearling boar—1, Harvey Berglund, Dixon.

Senior boar pig—1, Berglund.

Junior boar pig—1, Leo Schoningh, Petaluma; 2, Desmond Praltzel, Petaluma.

Senior and grand champion, Berglund; junior and reserve grand champion, Berglund.

Aged sow—1, Berglund.

Senior yearling sow—1, Schoningh, on El Dorado Maid; 2, Praltzel, on Mark's Crimson Wonder.

Junior yearling sow—1, Berglund, on Western Lady 5th.

Senior sow pig—1, Carlton Coffey, Petaluma, on Defender Gold Model.

Junior sow pig—1, Schoningh; 2, Praltzel.

Senior and grand champion, Berglund on Western Lady 5th; junior champion, Coffey on Defender Gold Model; reserve grand champion, Schoningh.

Aged herd—1, Berglund; under year herd—1, Schoningh; 2, Praltzel; get of sire—1, Schoningh; 2, Praltzel.

The Poland China hogs brought out two show herds with Marshall & Son of Sebastopol getting the bulk of the awards.

Aged Boar—1, Marshall & Son, Sebastopol, on Mouws Special 7th; 2, Henry Rued, Jr., Sebastopol, on Alexander.

Junior yearling boar—1, Marshall on Headlight; 2, Rued on Rued's King. Senior boar pig—1, Marshall.

Junior boar pig—1 and 2, Marshall.

Senior and grand champion, Marshall on Headlight; reserve grand champion, Marshall on Mouws Special 7th; junior champion, Marshall.

Aged sows—1, Rued on Nancy; 2, Marshall on Anna King; 3, Rued on Queen.

Senior yearling sows—1, 2 and 3, Marshall, on Dolly, Polly and Betty.

Junior yearling sows—1, 2 and 3, Marshall on Repeaters Giantess, A. B. and D.

Senior sow pig—1 and 2, Marshall on Unnamed; Glenn Winkler, Sebastopol, on Big Knox Lady.

Junior sow pig—1, 2 and 3, Marshall.

Senior and grand champion, Marshall on Repeaters Giantess A; junior and reserve grand champion, Marshall.

Aged herd—1 and 2, Marshall; under year herd—1 and 2, Marshall; Get of Sire—1 and 2, Marshall; Produce of Dam—1 and 2, Marshall; Barrow—1, Marshall.

Dr. J. J. Summerfield of Santa Rosa was the only exhibitor of Tamworth swine.

The really remarkable feature of the swine division was the exhibit made by members of the various pig clubs of Sonoma County. No less than 18 boys and girls had entries.

J. I. Thompson of Davis, formerly with the University of California, placed the swine awards.

SHEEP

While there were no competing flocks in the various breeds of sheep, there was enough competition in each class to make Judge Thompson roll up his sleeves and go to work, as each exhibitor brought along several head for each class.

The feature of the sheep show was the Shropshire exhibit of the Butte City Ranch of Butte City, Glenn County.

Corriedales

All awards to W. H. and L. L. Crane, Santa Rosa.

Hampshires

All awards to Henry Rued, Jr., Healdsburg.

Grades

All awards to Rued.

Rosamaines Rancho

Owned by A. J. & F. W. Stalder

Riverside, California

Mammoth Dispersal Sale

October 19 - 20 - 21, 1920

Owing to the ill health of the managing owner, Mr. A. J. Stalder, Rosamaines Rancho will itself be sold at public auction, and the splendid herd of registered Holsteins dispersed, the sale also including all of the other livestock and equipment on the ranch.

AT 9 A. M. TUESDAY, OCTOBER 19—Rosamaines Rancho will be sold. The land will be sold in two parcels, the first containing 235 acres and including all of the buildings. This is unquestionably one of the very foremost breeding plants in California, adapted either to beef or dairy cattle. The soil is of first quality, it is abundantly watered, splendidly located, and the improvements alone cost over \$200 per acre at normal costs. They could not be duplicated today for less than \$80,000 to \$90,000. All of the land adjoining Rosamaines Rancho on the west and north has already been leased for oil development, and wells are now being drilled within two miles of the property. Offers of cash lease or royalty have been offered for Rosamaines Rancho for oil, but the owners have decided to sell the property unhampered by lease, allowing the new owner to make his own oil lease if he wishes. This property will be sold on the following terms: One-third cash, balance in six equal annual payments, interest at seven per cent, payable semi-annually, two per cent discount for cash on deferred payments.

The balance of the ranch, consisting of 397½ acres adjoining on the north, all farming land, will then be sold on the following terms: One-half cash, balance in four equal annual payments, interest seven per cent, payable semi-annually, two per cent discount for cash on deferred payments.

Following the sale of the ranch, the same day, we will sell

50 REGISTERED DUROC JERSEY HOGS
 18 REGISTERED PERCHERON STALLIONS AND MARES
 1800 WHITE LEGHORN HENS AND PULLETS
 A SMALL HERD OF GRADE DAIRY COWS AND HEIFERS
 ALL OF THE IMPLEMENTS AND EQUIPMENT
 A NUMBER OF GRADE HORSES

On Wednesday and Thursday, October 20-21

the Entire Herd of

150 Registered Holsteins

will be sold, and this is one of the finest herds ever offered for public appraisalment in the west.

If you want to own some of the most consistently bred and developed registered Holsteins in California, watch carefully for the announcements concerning this herd in following issues. There will be in the sale a wonderful list of daughters of KING PONTIAC NETHERLAND SEGIS 3D, who now has 27 A. R. O. daughters with records up to 29.91 lbs. butter in 7 days for a senior 3 year old; nine daughters of SIR SKYLARK ORMSBY HENGERVELD, including the

famous twice 34 lb. cow GERBEN ABBEKERK MAID; and more than 60 of these choice young females are in calf to SIR ORMSBY SKYLARK RAUWERD, a 34 lb. son of Sir Ormsby Skylark.

KING PONTIAC NETHERLAND SEGIS 3D and SIR ORMSBY SKYLARK RAUWERD will both be sold, and they are both good enough to go into any herd of high class registered Holsteins anywhere.

Watch the announcements in following issues and write for catalog now.

Management

California Breeders Sales and Pedigree Company
 C. L. Hughes, Sales Manager, Sacramento, California.

Let the line AC, in the above figure, represent the initial cost of a silo. Let each division, d, e, f, etc., in the lower line represent the saving between silage and dry feed for a given unit of time. If, through inferior construction, the silo becomes useless before the lower line equals the upper line, there is an actual loss instead of a saving.

A Fact About Silos

Notice the above diagram. It proves that saving begins only when the difference between the cost of silage and dry feed totals the cost of the silo.

The Ideal Green Feed Silo is made of California Redwood, a material of which the Encyclopedia Americana says: "It resists decay . . . it resists fire . . . It will last as long as 40 years."

The tongue and groove staves, and heavy refrigerator doors with a three point contact on all four sides, keep the Ideal absolutely air-tight.

The steel hoops, placed where pressure is the greatest, add strength, stability, and prevent warping.

In short, the Ideal Green Feed Silo is built for permanence—for years of service after it has paid for itself.

If you are buying a silo in order to save money, an investigation of the Ideal will be to your advantage. Mail the coupon today.

The Fairs and Shows

By Frank D. Tomson

THE season of fairs and agricultural shows is at hand. The displays of products of the soil in most sections of the United States this year will be more elaborate than usual, for it has been an abundant crop year on the whole. Improved mechanical devices for farm purposes suggest a further advance in farm methods.

No display will be more important and none more closely studied than the livestock display presenting the better types of the pure bred standard. At no time in the development of agriculture has improved livestock had a more vital relation to the business of agriculture than in this year 1920. There seems no difference of opinion as regards the shortage of the beef supply, a condition that is certain to become very acute in the near future. But owing to the cost of production there is no longer a sufficient margin of profit to the grower to warrant the continuance of production of the inferior sorts of whatever breed. The solution of the situation is the adoption of the best available standards. The use of the pure bred sire never was so imperative as now, but this alone will not fully suffice. Every farm upon which livestock is grown should be the home of pure breeds, not because they are mere pure breeds, but because they adhere to the standard which we recognize as the pure bred type. The investment need not be a large one at the outset, but the laying of the foundation is essential and the accumulation of the progeny on the farm until finally the pure bred standard is the only standard known on the farm.

The future holds no suggestion of a return to former conditions. The movement is the other way and it will require livestock of the responsive types to make a sufficiently profitable return to those who own or operate the land. There is nothing complicated about the growing of pure bred livestock. It needs average intelli-

gence and energy and judgment enough to provide good care.

A Nebraska farmer marketed a load of steers recently at Omaha for \$273.65 per head. They carried a large percentage of pure Shorthorn blood, yet they were raised as any practical beef producer raises his steers. These steers had quality enough to command the top of the market and having the top price of the market, 16¼ cents per pound, they had the advantage also of weighing 1,684 pounds. Another Nebraska man marketed at Chicago a number of yearling steers that brought \$185.61 per head because they combined the quality and weight which represent the pure bred standard. It happens that these yearlings weighed 1,076 pounds and sold for 17¼ cents per pound, which was the high price of the year at the Chicago market.

How can any man growing inferior steers under the existing cost of production hope to compete with these men who have the good judgment to employ pure bred sires of the right type and females of at least near pure bred? There are very many instances where other growers make sales quite as profitable as these two indicated. There seems never to be a lack of competition if the offering is good enough.

This country maintains millions of cows, both beef and dairy cows, that actually fail to pay for their keep. In view of this one as rather impressed upon reading that 134 cows in Canada, of the same breed as these Nebraska steers just referred to, made milk records last year ranging from 7,000 to 17,723 pounds each. These are farmers' cows producing beef calves, and made their records under ordinary practical conditions, the kind that prevail or at least can be easily provided on almost every farm.

Beef and milk are the sources of revenue from cattle growing and we must get back to cattle growing on the farms to a much greater extent than for the past dozen years, for there

are certain to be attractive profits if the right kinds are maintained. The amount of the profit will be governed by the kind.

What I have said in regard to cattle growing applies with more or less equal force to hog raising, sheep raising, etc., and so I suggest that every farmer, whether he be a tenant or land owner, whether his range is limited to a small area or embraces many thousands of acres, make a close study of the livestock exhibits at these fairs and shows. Let him talk with the exhibitors and find out how they conduct their affairs back on the farms or the ranches and ascertain how these types which are displayed are produced. The various breed associations are offering extensive prizes to encourage these displays, but the winning of the prizes is entirely incidental. The impress which these exhibits make upon the observer is of much larger importance. These fairs and shows are useful agencies. They furnish a convenient place for the student whether he be a farm hand, a tenant or a land owner, to make comparisons and study the results which these experienced breeders and exhibitors obtain and learn the methods employed in bringing about results. It isn't a "fancy stock" business, this growing of pure breeds. On the other hand, it is the short cut to early and permanent profits.

Every man identified with the business of farming is concerned with the adoption of the best and most efficient means of bringing about improvement. The better types of livestock are provided now so extensively as to make them available for the use of farmers everywhere. He may make his selections in accordance with his preference—but the sooner the better.

Gas may form in a silo at the time of filling and for a week or so afterwards. This gas is heavier than air and so will settle in the silo. As soon as filling the silo is started the falling silage will stir up enough air currents to drive out the gas. A good way to determine if there is gas in a silo is to lower a lantern. If it goes out it will not be safe to go into the silo.

NEW RECORD OF VALUATION ON A GUERNSEY COW

Charles L. Hill and Son of Rosendale, Wisconsin, have sold a one-third interest in Cherub's Prince for \$11,000 to F. G. Rueping of Fond du Lac, Wisconsin, and have made a gift of a one-third interest to W. W. Marsh of Waterloo, Iowa. The price paid for the one-third interest by Mr. Rueping indicates a larger valuation on a Guernsey sire than has ever before been established.

Cherub's Prince 41543 is a three year old son of Imp. Hayes Cherub, grand champion at the National Dairy Show in 1913 and 1914, and never beaten in America except in 1916, when he surrendered the grand championship honors at the National Dairy Show to his own son, Ladysmith's Cherub. He is the sire of eight Advanced Register daughters.

SPEAKING OF MULES

In referring to the fact that preliminary census figures indicate a marked increase in the number of mules in Southern states, Wayne Dinsmore of the Horse Association of America takes occasion to pay his respects to the mule after the following fashion:

"The mule is the only fool proof motive power unit. They can go out singly or in pairs, fours or sixes, and after a full day's work return home all right whether the driver does or not. In these days of irresponsible labor that is a big factor. Then, too, a driver cannot overheat a mule. When he gets too warm he slows up to a gait befitting the weather, and not even the fluent vocabulary of an ex-cavalryman will persuade him to greater speed. Brought in at night, it is sufficient to pull off the harness and turn this long eared believer in "safety first" into a big dusty barn lot with food and water. He will roll until he is groomed to his own satisfaction and will not drink nor eat till cooled down enough to make it safe to do so. No matter how much grain is accessible, he will stop eating when he has enough.

"Long live the mule (he does it anyway)—the only fool proof motor, the quick money for the farm producer, the hardy exponent of safety first!"

**Let Us
Tell You
Why**

**You Should
Use
ECONOMY STOCK
Powder**

FOR: HOGS—CATTLE—SHEEP—HORSES

BECAUSE
it acts directly upon the affected parts.
it expels all worms.
it aids digestion.
it suppresses fever in the stomach.
it cools the blood.
it loosens the bowels.
it sweetens the stomach.
it aids mastication.
By feeding the powder in connection with grain, the animal will extract 10 to 20 per cent more of the nutritious qualities.

In our compound are Poke Root, Blood Root, Sulphur and other ingredients which act upon the kidneys, liver, spleen and blood; a filterer of charcoal to absorb the impurities of the digestive tract; Worm Seed Meal in sufficient quantity to destroy all worms and the four sodas which excite the secretion necessary to healthy digestion, sweeten the contents of the stomach and bowels and remove all impurities from the tract; claims which have been verified time and again by the testimony of our customers, which testimony is based upon their experience with and the benefits derived from the use of our goods.

For the Prevention of

ANTHRAX

Of all livestock diseases, anthrax is one of the most fatal.

For the preventive and curative treatment of anthrax we offer

ANTHRAXOIDS

(Spore Vaccine)

For immunizing cattle, horses, sheep and mules.

Anthraxoids are Anthrax Spore Vaccine in pill form. Each Anthraxoid is a dose ready to be injected under the skin of the animal.

Antianthrax Serum

A serum to be used when animals show symptoms of anthrax.

Anthraxoids-Antianthrax Serum

(Simultaneous Treatment)

Double vaccination with serum and vaccine. Used when anthrax is established or suspected to be in a herd.

Write for free booklet on the Prevention of Anthrax.

TOUCHING THE HIGH SPOTS

Tuberculosis is transmissible, loathsome and deadly.

A dirty milk pail is dangerous to health.

The legitimate way to water milk is to provide plenty of clean water for the cow to drink.

The fly is a filthy scavenger, always carrying germs.

Dairy cows are more profitable if given proper care and attention.

A minute quantity of contaminated warm milk will produce millions of germs.

Milk cooled to 50 degrees Fahrenheit or below and kept at that temperature retards the growth of bacteria.

Polluted water on a dairy may kill numbers of people.

Flies in the milk strainer look unsightly and contaminate the milk.

A milker dressed in dirty clothes has no reasonable argument to the contrary when you tell him he is insubstantial.

When the inspector finds chickens in your milking barn don't make it too strong when you tell him it's an accident. He may not express his thoughts to you, but nevertheless he will be inclined to think that chickens have a tendency to "come home to roost."

THE ECONOMIC IMPORTANCE OF TUBERCULOSIS

The wide distribution of tuberculosis among our animal population causes serious losses annually. Just what these losses total in dollars and cents is hard to give in exact figures, since there is such a wide range in reliable statistics.

When the dairy herd becomes infected, which is the case nine times out of ten, there eventually is a reduction in the milk supply; and again its presence in the herd may lead to cases of abortion and not uncommonly many cows finally die of the disease.

Pure bred stock also come in for their share of the disaster when tuberculosis makes its appearance among them. The breeding of such stock represents the lifelong efforts of breeders for several generations. Through this continued scientific breeding such stock reach a valuation of thousands of dollars and, since there are but a few animals in such a herd, the loss of one by death from tuberculosis or by interference of reproductive organs from the same cause diminishes or completely destroys the prospects for the future of those engaged in this field of animal husbandry.

LET THE SHEEP DESTROY SOME OF THE WEEDS

Did you ever stop to consider what a band of sheep is worth as a weed exterminator? In the first place, the band is worth as much in the destruction of weeds as a man with a team and cultivator or weeder through the season.

Secondly, there is a big difference in cultivating weeds out or mowing them and sheeping them off. Cultivating or mowing is an expensive method for which you get nothing but a little added humus to the soil, whereas the sheep turn your weeds into marketable sheep manure deposited on the fields.

It has been remarked that a small band of sheep adds a thousand dollars to the average appearance of the ranch in five years time from the standpoint of weedless fields. However, in the long run it is more than it appears. It is an actual source of steady income.

DISPOSING OF DEAD ANIMALS

If possible roll the carcass upon a few old poles laid parallel to each other on the ground, or pile some wood blocks, brush or old lumber around it. Completely cover the whole with a liberal quantity of damp stable manure, moist stack bottoms or similar material. If the dead body is that of a horse or a cow a large load is required. Then pour a gallon of coal oil on the side of the pile from which the wind is blowing and apply a match. The use of oil is not entirely necessary, but serves to get the fire well started. When this is done no further effort is required, but after a few days all that remains is a small ash heap.

Breeders Attention

The Premier Fair Event for
the 1920 Season Will Be

The Fresno District Fair

Held September 27---October 2

From the standpoint of attendance this fair will assure your getting before more people than in any other event in the state. Not alone that, but you will be placed before the kind of people who are educated and believe in purebred stock, and have demonstrated their willingness to buy what is good.

During this fair Mr. Fred C. Gatewood will have complete charge of this department. He has arranged for better accommodations and better equipment.

Stock Auction

On the last two days of the fair there will be a stock auction of purebreds under the direction of F. J. Griffin. All pedigreed stock may be entered for sale.

The Big Attractions

We will get the crowds through high class amusements. "Days of the Old West," a five-day event, featuring Tom Mix and hundreds of cowmen. On the last day the dedication of our new quarter-million-dollar speedway with twelve of the fastest national drivers in a 200-mile classic.

Please Remember

There are many fairs, but it is the ones with the big attendances, and the ones in communities that believe in the pure breeds that count. Don't miss the Fresno District Fair. Write for premium list and entry blanks.

FRESNO DISTRICT FAIR

Berylwood Holsteins

A genuine Berylwood bargain may be seen in our young herd bull prospect, whose high-record ancestry and fine individuality are fit claims to distinction. The dam of this young bull is Queen Saddle Vale Veeman Karlay, our high-record three-year-old daughter of King Saddle Vale 27th, Sire of calf is King Segis Pauline Alcartra—six nearest dams averaging 30.32 lbs.

The record of 30.11 lbs. butter from 539 lbs. milk in 7 days made by dam of this youngster was made under handicap conditions.

The calf is nearly white in color, and he is priced to interest an appreciative buyer.

the marketing problems of the small producer. All of the large packers have been asked to send their buyers

As we go to press C. L. Hughes, California Breeders Sales and Pedigree Company, wires: "Toyon Farm Association will sell 150 registered Holsteins at Sacramento November 10 and 11. Offering contains approximately 100 cows, 30 heifers and 20 bulls, all federal tuberculin tested and females bred to the noted Toyon herd sires Sir Pietertje Ormsby Mercedes 43rd, Sir Pietertje Ormsby Canary and Sir Aaggie Mead.

The essential points of a good dairy cow are indications of constitutional vigor, food capacity, development of the nervous system, good blood circulation, and the ability to produce milk abundantly.

Constitution—Well distended nostrils and good heart girth due to breadth and depth of chest are the best indications of that quality of health and vigor commonly referred to as constitution.

Food capacity—Great length from shoulder to hip bones, together with great width and depth of barrel, indicates well developed digestive organs, which enable the cow to consume and digest large quantities of food.

Nervous system, or nervous temperament—A good dairy cow is active and intelligent. Large, bright eyes, set rather far apart, a broad, well dishd face and a spare and angular form are good indications of nervous temperament.

Blood circulation—A good circulatory system is necessary to carry the digested food from the abdominal region to the udder. The milk veins should be large, tortuous, and branching, entering as many large wells as possible.

Producing ability—The digested food is converted into milk only after

reaching the udder. A large udder that is soft and pliable but not flabby when empty, and well developed forward and attached rather high behind, and teats of medium size and squarely placed are the best indications of the cow's producing ability.

The Wonderful Attractions of British Columbia

Few countries possess all the conditions for happy, prosperous living as does British Columbia. The varieties of climate and soil offer inducements for almost every branch of agriculture. Whether in the warm interior valleys, the rich grazing table lands or the fruitful lowlands of the coast or Vancouver Island, the advantages offered for

Dairying, Fruit Growing and Stock Raising

are such as must appeal to those who wish to improve their circumstances and at the same time live in a country of delightful climate, magnificent scenery, varied resources, progressive people and abundance of opportunity for development. British Columbia—the playground of America—is already famous for the production of its orchards, fields and dairies. Now is the time to

Learn about this wonderful Province and share in its possibilities. Its industrial life—mining, lumbering, fishing, manufacturing, transportation—assures a ready market at good prices for all the farmer can produce. Schools, churches, railways, roads, telephones, all the conveniences of an old land await you in this new Province of Opportunity and Success. Partnership Adjustment Sale

45 Registered Holsteins

Allana Farm, Dixon, Cal.

Thursday, September 23, 1920

To adjust an existing partnership between J. P. and W. W. Phillips, the entire high class herd of registered Holsteins at Allana Farm will be sold at public auction, excepting only one heifer and a few calves.

An outstanding attraction in this offering is SIR PIETERTJE KORNDYKE ORMSBY, the first son of the world famous sire Sir Pietertje Ormsby Mercedes ever offered at public sale in the west. Besides being sired by the greatest sire of yearly producers and show ring winners ever developed in any breed, SIR PIETERTJE KORNDYKE ORMSBY is out of a good record daughter of Sir Korndyke Hengerveld De Kol, second dam a half sister to Pietertje Maid Ormsby. He is 4 years old, a sure breeder, right in every way. The calves he has sired stamp him as a sire of great worth. Here is your opportunity to head your herd with one of the bulls most difficult to secure today—a son of the great "Sir Piet."

The Females

are mostly of Ormsby breeding, and afford an excellent selection of young typey individuals, some with good short and long time records, and others now on yearly test.

A 26 POUND COW, with a good yearly record, and bred to Sir Pietertje Korndyke Ormsby.

A DAUGHTER of the above cow by a full brother to Pietertje Maid Ormsby.

A 20 POUND 4 YEAR OLD with a good yearly record and heavy with calf to Sir Pietertje Korndyke Ormsby.

A BEAUTIFUL 21 POUND 3 YEAR OLD that has 470 lbs. butter from 12724.7 lbs. milk to her credit in 197 days. Bred to Sir Pietertje Korndyke Ormsby.

A DAUGHTER OF COLANTHA SIR PONTIAC AAGGIE out of a 26 lb. daughter of a 28 lb. cow.

SEVERAL DAUGHTERS OF SIR PIETERTJE KORNDYKE ORMSBY out of well bred dams.

REMEMBER that there are a number of yearly record cows and heifers, besides others now on yearly test, and daughters of yearly record dams.

A Choice Lot of Young Bulls

This sale is a real opportunity for dairymen to secure some richly bred young bulls of correct type, with several good enough to attract the owners of registered herds.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

Bull Tops Bray Sale at \$3,300

The complete dispersal of the W. M. Bray herd of Holsteins in a sale held at Sacramento, August 26 proved a bargain day for the comparatively small crowd of buyers who attended. The sale had been watched with considerable interest owing to the high quality of the offering and the fact that the sale included the bull, Colony Zarilda Newman. This bull is a son of the famous cow, Zarilda Clothilde 3rd De Kol with 33,153 pounds of milk to her credit, and a grandson of the equally famous cow, Margie Newman. Only one other cow in the world, Tilly Alcartra, has produced more milk in a year than the dam of this bull, and there are only four bulls of service age in the world from dams that have produced 33,000 pounds of milk a year. Because of those facts the sale of the bull was the cause of wide speculation. He was purchased by James McGilivray of Sacramento for \$3300 after a bidding contest with a representative of the McCloud River Lumber Company. At that figure he becomes the third highest priced Holstein bull ever sold at public auction in this state, and represents a most unusual value.

While the general average of the sale, \$355, was considered ultra conservative, it was due largely to the fact that the sale consisted for the most part of young things and of heifers that have not yet been tested.

In addition to the purchase of the top bull, McGilivray was the heaviest buyer of females, securing nine head. The top female was the four year old cow, Netherland Baker Mercedes 2d, that has a record of 15.21 pounds butter at 16 months—said to have been a world's record when made. She fell to the bid of Gotschall and Magruder, Ripon, for \$1025. Chas. W. Anderson of Burbank secured a real bargain when he selected the 31.6 pound Lady Cornucopia Mercedes. Owen Duffy, representing the Napa state hospital, selected nine head and Geo. C. Kreutzer made several buys for the Durham State Land Colony Livestock Association. Dr. Geo. A. Spencer of Sacramento made a number of attractive selections.

The sale was under the management of C. L. Hughes of the California Breeders' Sales and Pedigree Company, Sacramento. Ben A. Rhoades was the auctioneer.

A complete list of the sales follow:

- 1, Colony Zarilda Newman, March, 1915; J. S. McGilivray, Sacramento, \$3,300.
- 2, Calif. son of Donnybrook Pontiac Posch, out of Cornelia Blossom of Donnybrook, Napa State Hospital, \$100.
- 3, Son of Donnybrook Blossom Pontiac, out of Mercedes Blossom of Donnybrook, George Robinson, Sacramento, \$30.
- 2, Lady Cornucopia Mercedes, Mar., 1913, 31.6 pounds; Charles W. Anderson, Burbank, \$810.

- 3, Lella Newman Sadie Vale, May, 1920; J. S. McGilivray, \$400.
- 4, Lockwillow Zarilda Queen Corben, November, 1918; J. S. McGilivray, \$585.
- 5, Lockwillow Zarilda Beets, June, 1919; J. S. McGilivray, \$485.
- 6, Clara Mechthilde Newman, July, 1919; J. S. McGilivray, \$475.
- 7, Netherland Baker Mercedes 2nd, February, 1916, 15.21 pounds; Gotschall & Magruder, \$1,025.
- 8, Gladys Mechthilde Newman, December, 1916; L. Tuttle, Dixon, \$135.

Livestock News Notes

That grade cows are not bringing the good prices of a year ago was clearly evident at the auction sale held at the old Whitten ranch southwest of Porterville, Wednesday, August 25. Half a hundred Holstein cows were offered, but bidding was slow and the figures at which the animals were knocked down were quite low in the opinion of most stockmen. One thing was quite noticeable, most ranchers are looking for purebred characteristics even in the most inferior grade animals and bid accordingly. They are gradually refusing anything but the best and want something to bring up the quality of their herds. The cows sold were mostly pasture bred and carried incomplete records of milk production, which of course had its influence on the buyers. One good cow went for \$180, a price far in excess of the average, which was about what they would weigh out for beef. The individuals in which the white predominated seemed to be favorites. A group of short yearlings brought a fairly good price.

At the recent farm bureau auction sale of fat hogs held at Dixon the top price was \$15.30. About 200 hogs were sold.

H. C. Witherow of Greenwood Farm, Live Oak, reports the following sales from his herd of Duroc-Jerseys:

A fall boar to Gomez and Watson, Marysville; a fall boar to H. E. Berg, Marysville; spring boars to G. M. Sparks, Ingomar; John Borghman, East Nicolaus; John Kincaid, Bakersfield. Most of the boars mentioned are the get of Johnson's Defender Jr.

The annual Ogden Livestock Show will be held at Ogden Union Stock Yards January 6, 7 and 8.

Six carloads of wool have been shipped from Solano County through the state wool pool.

E. H. Hughes, formerly with the Missouri college of agriculture, has arrived at the university farm, Davis, to enter upon his new work with the division of animal husbandry. Hughes is regarded as an exceptionally strong man in animal husbandry work.

Professor R. F. Miller of the University of California has announced the appointment of C. E. Howell on the staff of the animal husbandry division. Howell, who is a graduate of the University of Missouri, has been engaged in livestock work in the state of Washington for the last few years.

Alex. D. McCarty, Modesto, has been very busy lately remodeling his hog plant at Riverina Farms. He has added a large number of individual

alfalfa lots with all modern conveniences for hog comfort and will soon be as well equipped as any breeder in the state. The McCarty herd under the careful management of Herdsman Curtis will be prepared to give strong competition at Sacramento, especially in the Poland sow classes.

Dr. L. J. Anderson, the newly appointed field secretary of the California Duroc-Jersey Association, is very busy getting his new work in hand. By way of a starter he has arranged for a consignment sale consisting of 25 sows and five boars to be held at Dixon some time in December. The stock to be selected from the herds in the Dixon district. Dr. Anderson is also organizing several pig clubs in various parts of the state.

The Las Posos Land Company sale of 500 grade Holsteins at Corcoran, August 18 to 19, is reported as one of the highly successful sales of the season. All cattle, 100 feeder hogs, and ranch equipment were cleaned up at very satisfactory figures, with Rhodes & Rhodes, salesmen.

J. L. Dunlop, breeder of big type Poland Chinas at Pomona, plans an exhibit at the Los Angeles and Riverside shows. His line bred boar Longfellow Timm, should be a strong contender for honors in the junior yearling class.

A daughter of Great Wonder I Am has just been purchased for the J. C. Craig Ranch at Owensmouth. This young sow comes from a leading Iowa herd and is bred to Pathmaster, said to be the largest boar for age in Iowa. His sire is Valley Col., champion of Illinois, dam, Queen of Pathfinders, the world champion. Craig has also secured a daughter of Pathfinder's Victory, littermate to Queen of Pathfinders. She is bred to High Top Orion, grand champion senior boar pig of Iowa, 1919, and a son of 1918 world's champion.

WHAT MAKES 100 POUNDS OF MILK?

A two year study of the cost of milk production undertaken cooperatively by the United States dairy division and Purdue University, on a number of dairy farms in northwestern Indiana, has resulted in figures on the requirements for producing 100 pounds of milk in winter and in summer. To give permanent value to the results these requirements were determined in pounds of feed, hours of labor, etc., and by substituting present costs and values for the various items a farmer can determine very closely what it is costing him to produce 100 pounds of milk at the present time.

In the summer months the requirements for 100 pounds of milk were as follows: Concentrates, 20 pounds; dry roughage, 27.4 pounds; silage and other succulent roughage, 60.1 pounds; hauling and grinding concentrates, \$0.014; pasture, 0.04 acre; human labor, 2.2 hours; horse labor, 0.2 hour; overhead and other costs, \$0.393.

In the winter months the requirements for production were: Concentrates, 38.6 pounds; dry roughage, 66.8 pounds; silage and other succulent roughage, 147.6 pounds; hauling and grinding concentrates, \$0.03; bedding, 20.3 pounds; human labor, 2.5 hours; horse labor, 0.3 hour; overhead and other costs, \$0.385.

It has been generally believed that the cost of producing milk was considerably higher in winter than in summer; and while this holds true as far as the gross cost is concerned, the figures obtained in this investigation show that the net cost of producing 100 pounds of milk from November to April was only 1.8 per cent higher than the cost from May to October, inclusive, and that the total cost varied only slightly from month to month within each of these seasons. This small difference between net costs of production during winter and summer is largely due to the greater credit allowed for manure during the winter season.

The price received for the milk, however, fluctuated sharply from month to month.

This Month in the Flower
Garden

NORTHERN CALIFORNIA

By A. R. Gould

MANY of our best flowers are
now blooming, the stately
Campanula pyramidalis
with blue and white flowers,
Michaelmas daisies, Helen-
iums, helianthus, zinnias, tithonia and
the fall show of roses. Berried shrubs
such as berberis, cotoneasters and
crataegus will be soon at their best,
and many trees and shrubs will beau-
tify the garden with their autumn
tints. This is the month also to think
of bulbs for the spring display as it
will be in order to prepare the ground
for some of the earlier flowering sub-
jects such as freesias, crocus, snow-
drops, ixias, narcissus, daffodils, etc.
Manure and deeply trench these beds
if you would have best results. Keep
a careful watch for aphids or green
fly on the roses and spray with ni-
cotine sulphate, and for mildew use
sulphur. Some shrubs will probably
need spraying also for scale insects.
Lime and sulphur or a kerosene emul-
sion wash are usually effective.

Early Bulbs

Freesias, those very fragrant flow-
ers in pure white, yellow and now or-
ange and lavender shades, should be
planted this month either in groups
or along the garden paths. They de-
light in a rich soil. When buying
secure only the best large size flow-
ering bulbs. Recently a new type has
been introduced, Freesia Ragoneri
hybrids which will flower from seed
sown the first year. Plant the bulbs
three inches apart.

Subjects for Winter

The following should be sown at
once for a winter display: Snapdrag-
ons in various shades, tall and medi-
um height; stocks, Ten Week; pan-
sies; violas; calendula; alyssum sax-
atile and Aubretia; also Primula poly-
anthus, P. veris and P. malacoides.
Sow these in boxes or on a semi-
shaded border. Later transplant.

Winter Flowering Sweet Peas

Seed of the best winter flowering
varieties should be sown now, and of
these we recommend: Early Snow-
flake, Orchid Red, Heather Bell, Song
Bird, Spring Maid, Early Warbler
and Early Peace. They thrive best
in deeply manured trenches.

Dahlias

Feeding with liquid manure twice
weekly will improve these and give a
longer flowering period. Cultivate this
plot frequently and spray or dust with
lead arsenate if the four lined bug or
other leaf eating insects are trouble-
some. Any of the best varieties of
which seed may be secured should be
selected and saved as frequently some
very interesting types may be raised
from such seed. Continue to disbud
to the main or terminal bud.

Chrysanthemums

The Queen of Autumn is now show-
ing buds. In fact, some of the early
flowering single varieties are in
bloom. The large flowered Japanese
reflexed and incurved need some skill
to grow as the right bud must be
taken and grown on to get the large
flowers. Many growers however are
now devoting their space to the new
singles, and pompoms of which there
are some beautiful types, and the
quilled singles are excellent. Fre-
quent applications of liquid manure
should be given now and overhead
spraying late in the evening until the
flower buds burst. Aphids usually are
very troublesome at this stage and
should be destroyed with nicotine
spray.

Charming Dianthus

The dianthus family has given us
some wonderful subjects, but one of
the best of recent years is Dianthus
deltoides rosea, a beautiful pink peren-
nial which flowers for several months
during the summer, looks happy
among the rocks in the rock garden,
or even in massed effect in flower
beds or along the border it is very
useful. It is easily raised from seed
sown now on a well prepared border
and grows about six inches high. It
will flower from seed in less than a
year. Interplant this for a fine border
effect with lobelia and you will have
a wonderful combination.

Lawns

Apply an artificial fertilizer such as
dried blood and well water in.

THE FLOWER GARDEN IN SOUTH-
ERN ARIZONA IN SEPTEMBER

By M. E. Bemis

LIFE is short at best and un-
less one gets some of the
pleasure which comes with
more beautiful surround-
ings he has lost something
which cannot be retrieved. Psychol-
ogists claim that those whose eyes
rest upon the things of nature which
are most pleasant are themselves bet-
ter natured, approach the tasks of the
daily routine with less fatigue, and
are better able to cope with the prob-
lems that confront them. In other
words, their surroundings help to har-
monize them with the great law of
nature which is for the promotion of
the good and the beautiful. It is a
great relief in traveling through the
country to find, as we frequently do,
some bare and otherwise unattractive
shack which is being used for a home,
beautified by vines and surrounded by
small plants and flowers. These things
of nature add more charm to the habi-
tation and go farther to make it a real
home than paint or the highest type of
architecture.

The flowers which may be planted
in September in Southern Arizona are
the ageratum, mignonette, freesia
bulbs, phlox, nasturtiums, pansies,
sweet alyssum, hollyhocks, zinnias
and Christmas flowering sweet peas.
Ageratum is a hardy annual, easy
of culture and popular for beds or bor-
ders.

Mignonette is also a hardy annual
and grows from six to 12 inches high.
Seed sown in the fall will bloom early
in the spring.

Phlox Drumondii are favorites for

FAGEOL
WALKING
TRACTOR

The range of performance of the Fageol tractor
is ever widening. Grain lands are now exten-
sively worked with them. Farmers find that,
with several of these small tractors aggregating
the same total power as one large machine, they
require fewer high-priced mechanics, lose less
operating time, get better net results.

For a fleet of, say twelve Fageols, using one
mechanic, one good driver and ten common labor-
ers, at least 90 per cent of the outfit will be
constantly at work.

Exclusive Fageol Features
Increase their operating range
Reduce their operating cost

See your local dealer immediately. He has a
new plan that will make delivery when you want
it certain.

A Woman Who Works With Her Head

By Jean A. Koethen

THE prevailing masculine idea that a woman uses her heels when she ought to use her head may be true of the woman whose pathway from range to sink is worn deep with the daily grind, but it does not apply to the poultrywoman. To make any sort of success with poultry a woman must use her head—so says Mrs. E. Decker of San Gabriel, and she ought to know. To care for nearly 2,000 hens and pullets, besides hatching and selling many thousand chicks each spring, with only a little help on the cleaning and some other heavy jobs, is a man size task, and any woman who accomplishes it must use her head.

"I find I must save myself on the heaviest work," said Mrs. Decker, "for the head is not clear when the back is tired, and one must think one's way through." In every part of her big plant she has carried out this plan, and it is astonishing, when you come to think of it, in how many ways steps can be saved in the care of poultry.

There are her self feeding bins, for instance, one in each house. These need only to be filled every two weeks or so and the mash shaken down occasionally so that it is always within reach of her birds. Then a particularly interesting device is a sort of wire pocket under the droppings board, in which greens are fed. This pocket is two or more feet from top to bottom and so arranged that it catches every bit of air that is circulating and is kept fresh for a long time. The hens peck through the wire but cannot drag the cut alfalfa onto the ground.

How her big brooder house, which will hold 1,200 chicks, could be so arranged that extra pullets could be kept in it late into the summer was a puzzle which kept Mrs. Decker thinking for some time. Finally she hit on the plan of building a long wooden awning over each of the two east windows. In warm weather, and even in rainy weather, if the chicks are not very young the windows can be removed. The awning keeps out the morning sun, admits air and adds much to the availability of the house.

The door of the feed room opens on the south and catches the sun all day. How to save carrying feed out through the heat was another problem which was finally solved by building several chutes which carry grain and mash out into the shed room where the big clover cutter stands. On a shelf above the chutes stand half a dozen pails on each of which a big black number is plainly painted. "I could never make the boys I hired now and then understand where a given pail of feed was to go," said Mrs. Decker. They invariably took the right pail to the wrong house. Finally I painted a number on the door of each house and the same number on a pail. Now when boys carry the pails they don't have to remember; they just make the numbers match."

In the incubator cellar is a compact set of cooling shelves and a table that folds up against the wall. Three thousand chicks can be hatched here at once, and 1,200 of them can be brooded around the big brooder stove. "One can probably save more chicks if they are kept in smaller flocks," admits Mrs. Decker, "but I prefer the large flock because the labor is less." To make sure that the chicks are abundantly warm at bedtime more heat is turned on just as they are ready to sleep. This overcomes the chilly feeling that keeps them from settling down quickly, and as soon as they are settled down for the night the temperature is lowered again. The chicks are taken from the brooder house at six weeks of age and put in colony houses where they are warmed at night by kerosene lamps if necessary. A little heat is all that is required and the lamps answer the same purpose as the more expensive portable hovers.

A Convenient House

The laying house is of a type used by several San Gabriel poultrymen and differs from the conventional design in that the front is boarded up two-thirds of the way to the eaves. A wide door in the side and another at the

end with ventilators under the droppings boards and also above them under the eaves supply any lack of air from the closing of so much of the front. The closing of the space under the eaves, which is advocated by so many writers and lecturers, Mrs. Decker has not found necessary. The door at the end of the house is divided in the middle, making it possible to admit more air without a floor draft.

Mrs. Decker came to San Gabriel three and a half years ago, alone and anxious to make a living by outdoor work. Her work with poultry has been unexpectedly successful, and she has built up not only a big poultry plant but a cozy home with garden, fruit trees and all that makes country life worth while.

POULTRY, RABBITS AND PIGEONS AT LOS ANGELES LIVESTOCK SHOW

Premium lists offering attractive awards in the poultry, rabbit and pigeon show in connection with the Los Angeles Livestock Show, October 2 to 10, are bringing dozens of letters reserving display space. "We have every assurance of a large attendance and a most successful show," says E. I. Hammond of Riverside, who has been appointed manager of the poultry, pigeon and rabbit displays. "We earnestly hope all fanciers will unite with us in presenting a show second to none in the West. This year we expect displays of 1750 poultry, 500 pigeons and 500 rabbits. Buildings are being specially constructed to house this show." Entries close September 15.

Poultry classes are arranged for every breed named in the American Standard of Perfection for Poultry. All premiums are open to the competition of the world except club prizes and specials. Poultry and rabbits draw cash prizes of \$2 to \$1; exhibition pens of poultry draw \$5, \$3, \$2.

Special and Sweepstakes Poultry Prizes

Best display, any one variety, single exhibitor, \$20; second best, \$10; best display by novice, \$5; best display in American class, \$10; Mediterranean class, \$10; Asiatic class, \$10. Best display Bantams, \$10; waterfowl, \$10; turkeys, \$10. Groups of Polish, Hamburg, French, Game and Continental classes, \$10. For largest exhibit by any one exhibitor, \$20.

"RED TOP" STEEL FENCE POSTS

America's Foremost Fence Post

The "Red Top" Steel Fence Posts have earned the right to be known as the world's foremost fence post.

Millions of these permanent steel fence posts have been installed on Government property, along the right-of-ways of leading railroads and on thousands of America's best farms.

The "Red Top" has answered the every requirement of the three general classes of post users. It has given continuous satisfactory service under most adverse conditions and in each case it has made good.

Natural enough that today it is recognized as the world's standard fence post.

Know this superior steel fence post. Identify it by the "RED TOP."

"Red Top" Fence Posts drive like a stake—Anchor like a rock—No concrete used for line posts.

Commercial Poultry Classes

Best displays, \$10 to \$1; best layers, \$5 to \$3.

Special and Sweepstakes Rabbit Prizes

Best display by one exhibitor, \$20; second best, \$10; best display by novice, \$5; by school boy, \$2.50; covies, \$3 to \$2.

Special and Sweepstake Pigeon Prizes

Best display fancy pigeons, \$10; utility pigeons, \$10; pigeons, open to exhibitors outside Southern California, \$5; largest display racing homers, \$5; best bird among 15 varieties, \$5; largest exhibit in pigeon department, \$10.

Los Angeles County school junior poultry clubs are expected to enter 200 specimens in the poultry, rabbit and pigeon displays.

Poultry Queries

Conducted by J. A. Koethen

Cholera Perhaps

Our black Minorca hens seem to get helpless in the legs and can only travel about by beating their wings on the ground. Their bowels are very loose. In a few days they die. In some cases the comb turns very dark and becomes limp and they just mope around till they drop and die.—J. B. P., Lodi.

The symptoms suggest fowl cholera, which manifests itself in so many different ways that it is impossible to diagnose it without a bacterial examination. The only treatment that secured results with the cases treated by Dr. Beach of the poultry division last winter was a thorough cleaning up of the premises, with isolation of the sick birds and the use of bichloride of mercury (1-5000) in the drinking water. Bichloride is more effective than permanganate of potash, Dr. Beach believes, because it does not lose its strength in water, as permanganate does. Make sure that all food given is sweet and clean, without a trace of mold, feed a good balanced ration, as recommended in the answer to Longvale subscriber, with an abundance of green feed and, above all things, see that yards and houses are clean. September is a splendid time for a good old fashioned housecleaning in preparation for the heavy work of the winter.

Milk for Layers

What is the best way to feed milk to laying hens?—Subscriber.

Poultrymen agree, I think, that milk is most satisfactorily fed sour and mixed with ground grain into a moist mash which is fed once a day. If it is set before them in pans it is rather mussy and is believed by some to encourage intestinal worms. Mixing it with the ground grain induces the birds to eat more mash, which is one of the things we are working for.

Intestinal Worms

My young Leghorn pullets and some of my hens are infested with intestinal worms which are often several inches long. The intestines are knotted up and seem so diseased we hardly think the birds fit for food. How can they be cured?—Subscriber, Turlock.

The tobacco treatment recommended by the poultry division of the college of agriculture at Berkeley is the easiest and seems to give satisfaction. A pound of tobacco dust is mixed with 50 pounds of the mash, which is kept before the hens constantly, and the hens eat as freely as they will of this for three weeks. Then they are given the mash without the tobacco for three weeks, when, if all symptoms of worms have not disappeared, another three weeks course of treatment is given. If you do not care to use tobacco you might try oil of turpentine which is given in doses of 10 to 15 drops, mixed with an equal quantity of olive oil. This is followed in two hours with two to three teaspoons of castor oil.

The Allis-Chalmers 18-30

A Farm Tractor for Heavy Work

THE Allis-Chalmers 18-30 is a sturdy, well built tractor that is admirably adapted to the grueling work of the average California farm.

It is built complete in the great Allis-Chalmers plant—just as all of their other machinery for the past 65 years has been built.

This 18-30 has many special features—removable cylinder sleeves—frameless construction—front axle flexibility—over sized radiator—etc. The Motor and other units are built for this tractor—not any tractor.

In this 18-30 every detail of construction has been worked out to deliver uninterrupted service, continuously and at a low operating cost.

Write at once for full information—and name of nearest dealer.

varieties 85@1.25 per lug. Crabapples, lug, 75@1.25.

Bananas: lb., 10½@11.

Cantaloupes and Melons: Cantaloupes—Market steady, supplies heavy, quality and condition wide range. Local: Tiptop and Paul Rose, pink meats, standard crates, best 75@1.25. Watermelons, lb., 1@1½.

Grapes: Muscats, Malagas and Hamburg, 6@8; Tokays, 12@14.

Nectarines: Lb., 7@8.

Peaches: Local, best, lug, 2.00@2.40.

Plums: Lb., 7@10.

Pears: Bartlett's, best, lb., local, 5@6; Northern, 8@10.

CITRUS FRUITS

Grapefruit: California, per box, market pack, 3.00@3.25; special packed brands, 3.75@4.00.

Lemons: Market dull, wide range in prices. Local stock: Packed, 3.00@3.50; loose, 1.25@1.75; lug, mostly 75.

Oranges: Supplies moderate, market strong. Valencias: Packed special brands, 126's, 150's and 176's, 7.75@8.50. Local packed, second grade, 4.00@4.75; packing house culls, 1.25@1.75 per box.

HONEY

U. S. bureau of markets: Demand moderate. Cars f. o. b. usual terms. White orange, 19@20; light amber alfalfa, 15½@17½; Hawaiian light amber, 14½; beeswax, 40@43.

Hamilton & Menderson: There is almost an entire lack of demand for honey. Prices to producers:

White sage and white orange, nominal, 18; light amber sage, 15; light amber alfalfa, 13½; Nevada fancy white, 15; Hawaiian honey, 12@14, according to the grade. Wax, 38@40.

A. I. Root, August 4: The honey market is very quiet, with a tendency toward lower prices. Prices to producers: Extracted amber, 15; light amber, 16@17; white, 18½@19. Beeswax, 40 cash, 42 trade. There is practically no comb honey offering.

GRAIN AND FEEDS

Grain Exch. prices bld August 31:

Barley: Carlots, on track 2.27½@2.30.

Bran: Kansas, 54.50@55.50.

Milo: Eastern bulk, 2.91½@3.00.

Corn: blk. No. 2 Yellow, 3.20@3.25.

President Stow of the Golita Lima Bean Growers Association estimates the Lima bean crop in Santa Barbara County at about 50 per cent of normal. Horticultural Commissioner Kellogg thinks it will not be over 35.

Canned fruit freight rate, formerly 90½ cents per hundred pounds, since August 26 is \$1.20½. This means an increase of about \$80 per car.

"The Legend of the Tules" is an especially striking pageant to be staged at the Tulare County Livestock and Agricultural Show.

A NEW APHIS DESTROYER

A Cultivator subscriber at Escondido, J. G. French, sends a suggestion regarding aphis control which certainly indicates a simple, cheap and possibly effective process. Anyway, it is worth trying. We will be glad to hear from subscribers who test it out. Give it a thorough trial. Mr. French writes:

"The following is from an English paper, Home Chat, published in London, which I have always found reliable. It is certainly a simple remedy for aphis and nicer to handle than nicotine sulphate, etc. I have not had occasion to try it myself":

"I recently heard that a seed firm offered a prize of ten shillings for the best gardening hint, and one ounce of ground alum dissolved in a gallon of water as a remedy for green fly was the recipe that not only won the prize but the contributor was sent 30 shillings instead of ten, the hint proved so valuable."

Condition of Lima beans is estimated at 51 per cent of normal by reporters of the California development board.

San Bernardino County is making carload shipments of grapes. Shippers are anxiously watching the car situation.

Fifteen Years of Tractor Progress

Fifteen years ago the Harvester Company set its resources and its unrivaled farm engineering and field knowledge to work at solving the farm-power problem. For fifteen years it has been placing practical tractors on the farms of the world.

One result of this long period of development and accomplishment is the International 8-16 Kerosene Tractor which has all the refinements and perfections of these progressive years of endeavor. In the factors of durability, economy, reserve power, comfort, ease of control and general satisfaction this tractor is recognized as the standard by which others are judged.

The International 8-16 Kerosene Tractor is particularly popular here in

California because of its adaptability to orchard service as well as general farm operation. Its compactness, light weight and flexibility of control make it easy to handle among trees and the fact that all moving parts are enclosed or amply shielded prevents injury to low-hanging branches. Its three speeds—1¾, 2½, and 4 miles an hour—meet the requirements for cultivation, pulling a power sprayer, road work and general farm service. A most advantageously located pulley provides power for all forms of belt work.

Another factor: prompt after-sale service is always available through International dealers everywhere and the Harvester Branch Houses at Los Angeles and San Francisco. This means much to the tractor owner.

May we send you literature descriptive of the INTERNATIONAL 8-16 KEROSENE TRACTOR?

A Gopher Trap That Never Fails

Now we know that when we advertise the Chubbuck Double Catch Gopher Trap as one that never fails we are making a strong claim.

But Read What the Farmers Say

I have used the Double Catch Trap with success. It never fails to catch and hold the animals.—Wm. Brown, Santa Ana, Calif.

I have tried all kinds of traps but never found one that did the work equal to this trap, as it NEVER fails.—Elbert Olney, San Francisco, Calif.

EASILY AND QUICKLY SET

The Chubbuck Trap has been O. K. for us. We got 17 gophers in three weeks. Five gophers in three hours from one hole was the best we made.—W. Hartley, Ferndale, California.

The moment I saw the Double Catch Gopher Trap I knew the problem of getting the gopher was solved, for as many times as I have set the trap that many times have I caught a gopher.—Edward Reynolds, Lathrop, California.

Every Set a Gopher Less Catches Large or Small Rodents I secured one of your new Double Catch Traps and in seven days I caught 21 gophers. I got the 21 gophers in the week without missing a single shot. I then bought two more traps and was not very long ridding my forty acres of the pest.—John H. Thomson, Lathrop, California.

Call on your dealer or send direct to us. Price \$1.00 post paid. Money returned, if not satisfied. Spring steel wire is hard to find. We are trying to keep ahead of the demand. Order now.

E. J. Chubbuck Company, Dept. A.
731 Market St. San Francisco, Cal.

The New "KNAPP" Tractor Disc Plow

The only tractor disc on the market with an ADJUSTABLE "A" HITCH, which enables the operator to throw the plow to either side, and always pull from the center of the tractor. No side draft. Furrow wheel automatically adjusts itself and is held straight ahead at all times—regardless of the plow position. Has Knapp Power Lift, extra wide clearance, and many other advantages. Built in 2-, 3-, and 4-disc for all types of light tractors. Write for details.

ARIZONA FLOWER GARDEN

(Continued from page 299)

borders. They blossom early in the spring from seed planted early in the fall.

Nasturtiums are a particular favorite of flower lovers in Southern Arizona. They grow readily and should be grown even more than they are, although somewhat tender. If protected from the north they will grow and blossom during the latter part of the winter; unless protected they may be killed by heavy frost. Both tall and dwarf varieties are grown here considerably.

Pansies are one of the old fashioned flowers that never really grow old. There are many varieties and they may be planted in beds where they are to bloom or, following a somewhat popular plan, they may be first planted in paper drinking cups where germination may be aided by control methods such as shading, water, etc. Then they may be readily transplanted, cup and all.

Hollyhocks are another old fashioned flower not grown as much as they should be. If planted in the fall they will bloom the following year.

Zinnias are old fashioned, but an

otherwise unattractive spot may be made beautiful by sowing a few packages of mixed zinnias. They will be cut down by frost but if sown early in September will make some very attractive blossoms before the heavy frost that kills them.

September is the month for planting the Christmas flowering sweet pea. This is one of the best flowers known and very popular. These Christmas flowering varieties are almost equal to the Spencers. There are a number of varieties, of which the Early Blanche Ferry, Mrs. Alex Wallace, Mrs. C. H. Totty, Mrs. F. J. Dolanskey, La Marquise and Christmas White are the best known.

Iris are readily grown in Southern Arizona. They grow with little attention and are worthy of more extensive cultivation. They may be planted in the fall from August to October, and after once planted may be left undisturbed. The Spanish and English varieties do best in sandy soil with good exposure. These usually flower in May and June. The Syria and Palestine varieties blossom in February. Probably the most popular varieties for the Southwest are the Spanish Iris, English Iris, Iris filifolia and Iris reticulata.

This Month in the Vegetable Garden

Southern California

By D. F. Reichard

SEPTEMBER is a heavy planting month in Southern California. It is during August and September that the acres and acres of vegetables are planted for winter shipments to Eastern markets.

The drying days of the past two months have taken most of the moisture out of the ground so that it will be necessary to thoroughly soak it before planting. A good method is to turn on a large sprinkler and let the water run for about one hour at each setting, or if it is long rows you are working with, run furrows close together and let the water run slowly through these. In a couple of days ground wet in either manner will be ready to work. Pulverize it to a depth of ten or 12 inches and level the plot off, then make broad shallow furrows far enough apart to leave a ridge wide enough to sow seeds in single or double rows as the individual planter prefers. A couple of days before plant-

ing let the water run slowly through the furrows. This will put the moisture near the surface at the ridges where the seed are to be planted. Sow the seed and in a few days irrigate again, after which as soon as the ground is dry enough cultivate lightly so as to not disturb the freshly sown seeds.

The plantings this month run more to the hardy vegetables. It is too late to put in squashes, cucumbers and melons, and only in warm sections can corn and beans be planted in the early part of the month.

Sow seed of Crosby's and Early Egyptian beets, Swiss chard, endive, Goliath kohlrabi, New York and Cos lettuce, Bermuda onions for setting out later, parsley, parsnips, prickly seeded spinach, Oxheart carrots and early turnips. Start seed beds of cabbage, cauliflower and kale for setting Laxtonian peas for December use.

Better start cleaning up stuff that is past in preparation for manuring and getting the ground in shape for next season's garden.

Northern California

By A. R. Gould

ACTIVE preparations for winter cropping should be the chief aim this month. Clear off all old plots, trench under the refuse, using lime in the soil, and be fairly liberal with manure. Dig deeply when trenching and remove any diseased portion of the crop such as potatoes or tomatoes which would carry fungus spores over to another season's crop. Continue to store root crops for the winter, digging potatoes when the tops have become yellow. Many useful crops may be grown throughout the winter and a well cropped garden will beat the high cost of living.

Lettuce

We advised sowing Los Angeles and May King varieties last month. These will now be ready for thinning out and quite a number of plants may be used for transplanting. However, this should be done either early in the morning or late in the evening, never during the heat of the day, and it is always a wise plan to first irrigate the trench. Successional sowings of lettuce may be made. White Paris Cos or Romain are excellent.

Carrots

Thin out those sown last month to five or six inches apart in the rows. A sowing of Danver's half long may still be made on a rightly prepared soil. Apply soot and wood ashes to the plots, raking well in.

Leeks

These will require liberal applications of liquid manure to produce large well developed stems, and burlap or thick paper should be wrapped around to blanch them. This is a very hardy crop and should certainly be more largely grown.

Celery

This crop will now be nearing maturity and will require blanching to make the stems white and crisp. The same method as advised above for leeks may be used, and being a heavy feeder it will be necessary to water with liquid manure two or three times a week. Sometimes this crop is attacked by mite or red spider, when it should be sprayed with liquid sulphur.

Parsnips

Another sowing of this valuable root crop may be made as it is very hardy and grows better in cooler weather. Sow the variety Hollow Crown in rows two feet apart in soil well prepared with manure. Parsnips have great food value and should be in every garden.

Tomatoes

Remove some of the heavy foliage if the fruits are slow at ripening. Some fruits just turning color may be ripened off the plant by placing in a well lighted room. Remove any

diseased fruits from the plot and bury with quick lime.

Kale

Plants of these may still be put out, spaced a distance of two feet apart in well manured soil. This makes a fine hardy winter crop. Poultrymen should plant extensively.

Beans

Collect dry shell beans as they become ripe and store for winter. Sow the winter bean Broad Windsor in rows two to three feet apart. Cultivate deeply before sowing.

Brussels Sprouts

These may still be planted out, 18 to 20 inches apart in rows two feet apart. Irrigate the rows well before planting.

Cabbage

Sow Savoy and Autumn King for winter use on the seed bed.

Beets

Sow Improved Blood Turnip on well prepared soil. Sow in rows 18 inches apart. Matured roots of this crop may also be dug and stored for late fall use.

Onions

The main crop such as Australian Brown Prizetaker, etc., should be ready to harvest this month. Tie them together by the tops and hang up in a dry shed for winter.

Parsley

Thin out to six inches apart the variety Moss Curled sown last month. A sowing may still be made for winter use.

Swiss Chard

Those who require a cut-and-grow-again vegetable should try this as it is an excellent long standing beet which is grown for the tops used for cooking as spinach. Sow Giant Lucullus in rows 18 inches apart.

Strawberries

Many young plants, or runners, may be removed from the parent plant this month and planted in the new plot, which should have been well prepared with manure.

Raspberries

At the end of this month the canes may be dug up and divided for replanting the new plot of the earlier fruiting varieties, but St. Regis must not be disturbed until late in the year as it is a late fruiting continuous cropper. Raspberries are a very profitable crop to grow and are now being extensively cultivated. New plots should be deeply dug and well manured whilst existing plots should be renovated and well rotted manure applied.

Southern Arizona

By M. E. Bemis

ALL garden work really begins in September. The things which may be planted in September are beans, beets, cabbage, cauliflower, kohlbart, kale, lettuce, onion seed, onion sets, peas, radishes, spinach and turnips.

Fortunate is the gardener who has made his preparations for the fall garden throughout the summer. For best results the land should have had a good coating of stable manure and been plowed under. Seed bearing weeds should have been kept down. Assuming that all this has been done, the fall gardener has little to do excepting to plow the land again and work it up with harrows, disk, drag and whatever may be necessary to put land into first class shape, and first class shape for a garden means that it must be approaching the "ash heap" condition.

Beans may be planted in the vicinity of the Salt River Valley up to September 15, in Yuma Valley a little later, and this would also apply to the Imperial Valley of California. Varieties best adapted have been mentioned before but a repetition may do no harm: In pole beans these are the Kentucky Wonder, Kentucky Wonder Wax, Broad Windsor and White Seeded Kentucky Wonder; bush varieties, Stringless Green Pod, Black Wax and

Note the extreme simplicity and accessibility of the Hardie Junior pump. It is the smoothest and easiest running pump of its kind made. Connected to the engine with positive chain drive running on cut sprockets, it receives all the power from the engine.

Spraying Economy and Speed for the Small Grower

Here's a power sprayer—THE HARDIE JUNIOR—that is guaranteed to supply two lines of hose and maintain a pressure of 200 pounds yet selling at a price so low as to make hand spraying thoroughly unprofitable.

The Junior has a full 1½ horsepower engine equipped with magneto. The Hardie Junior pump is a marvel of simplicity—the rocking cylinder does away with the sliding cross arm, the most troublesome part of any power pump. It has bronze bearings, cut gears, brass ball valves and all the operating equipment is fully curtained and cabbed. The tank has a capacity of 150 gallons and is equipped with rotary propeller agitator.

This Hardie machine is of the same high quality in workmanship and materials as the larger Hardie Sprayers—differing only in capacity and price.

See this low priced, high quality, Hardie Junior Sprayer. It does the work quickly, thoroughly and economically—an ideal sprayer for the small grower.

Hardie Sprayers are made in different sizes and capacities to fit every spraying need.

For growers who need greater capacity and pressure, there is the famous Hardie Triplex Sprayer and other models.

HARDIE MANUFACTURING COMPANY

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property. Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now. Write today, stating location of land and number of acres.

California Cultivator
Costs \$1 per Year

Improved Golden Wax; Lima beans, Burpee's Bush and the large.

In the gardens that are to be hand cultivated beans may be planted two feet apart, farther apart if horses are to be used for cultivation, and they should be covered one to two inches deep. One pound seed is supposed to plant a row 80 feet long. Beans planted under favorable conditions and cultivated and irrigated as they should be will mature in six to eight weeks. This ordinarily will give ample time for beans planted up to September 15.

Beets, if hand cultivated, may be planted as close together as 12 inches, but for field culture or where a horse is to be used, 18 to 24 inches apart. These may be planted any time and should do well. Frequent cultivation is the secret of good beet culture, inducing rapid growth, which prevents the woody condition so common to beets which have little attention. Nine to ten weeks should be sufficient to mature beets for the table. Varieties best adapted are the Eclipse, Crosby's Egyptian, Extra Early Egyptian, Early Blood Turnip, Detroit Dark Red and Long Blood. Swiss chard is a variety of beet which produces top rather than root. In fact, it is grown for the top and very largely fed to poultry. Several poultry men have found this to be the ideal winter green feed and its use should be encouraged. As it is a variety of beet it should be cultivated in the same manner as beets and the sooner a few rows are started the quicker it will be ready for the chickens and will perhaps be a help in producing winter eggs so much desired.

It is a little late to start cabbage from seed, and the fall gardener would do better to buy his cabbage plants. September 1 is a little early to set these out and the September work in cabbage culture should be in getting the land where they are to grow in the right sort of condition to put them out early in October.

Kale and kohlrabi should be planted also.

September lettuce is one of the common garden or truck crops which have been grown with conspicuous success in the Salt River Valley of Arizona. The most important thing in lettuce growing is to have the ground fertile. In fact, it is very nearly useless to plant lettuce unless the ground has been made rich and mellow. Early in September is probably the best time to plant. Three-quarters of a pound of seed is required to plant one acre. Probably the most successful method is planting in double rows on each side of a ridge, 24 to 30 inches apart. Some growers prefer to have the rows run east and west and in planting earlier there are some who prefer to plant only on one side of the ridge and this the north side. This gives a little protection from the sun. Seed should be planted quite shallow in moist soil, although many find it advisable to irrigate until germination is complete, and if a stand is not secured, replant. Lettuce growers experience more trouble with grasshoppers and cotton caterpillars than anything else. Poison bran mash is the best protection from damage from grasshoppers, and arsenate of lead in a spray for protection against the cotton caterpillar. A better method is to dig a trench or shallow ditch with perpendicular sides on the side from which the caterpillars seem to come. This will serve as a trap and they may be killed by dragging a block over them through the trench or in some similar manner. Bran mash is made as follows: 20 pounds bran, 1 pound Paris green, ½ gallon molasses and 3 to 5 lemons chopped in a food chopper. This mixture should be scattered broadcast over the ground under the lettuce as early in the morning as possible, so that the hoppers when they begin feeding at daylight get the poison before it dries up.

The New York Market has proven the best lettuce for this section. Arizona Wonderful is similar to New York Market and considered somewhat superior by those who have given it a trial.

Onions, like lettuce, require a heavily fertilized soil. October 1 is about early enough for planting in a field where they are to grow. Those who prefer to transplant may plant in beds September 10 to 25. It is claimed that one man can transplant an acre

in four days. Onion seed are difficult to germinate in hot weather, hence if planted in beds in hot weather they must be shaded and it is not much use to plant them until the nights are cool.

The early variety of garden peas should be planted in September, the later varieties next month. One pound of peas should plant 80 feet of row. American Wonder, Early Alaska and Gradus are among the favorite early varieties.

Radishes, like beets, may be planted any time from now on. An ounce of seed will plant 100 feet of row. They grow rapidly and several varieties mature quickly. The Early Scarlet Globe, Early Scarlet Turnip and Early Long Scarlet are good varieties in this section. The Long White Icicle also has its friends.

Spinach is another easily grown vegetable and one that seems to be readily adaptable to Southwestern irrigation conditions. This may be sown in succession every two weeks if one desires. One ounce of seed will be sufficient for 100 feet of drill. The Prickly Seeded Winter has proven the most popular.

Turnips are a standby that should be more generally grown and should have a place in the small garden. An ounce of seed is sufficient for 75 feet of row. The Purple Top Strap Leaf is one of the most popular. Snowball is good. Purple Yellow Rutabaga is also good.

As easily grown as vegetables are in the winter season in Southern Arizona, it is rather strange that more farmers do not avail themselves of the opportunity which they have of supplying the table with fresh vegetables throughout the winter and spring months. It is not altogether a question of money saved or money made; it is more the satisfaction of having fresh grown vegetables without the inconvenience of getting those which are shipped in. Health conditions, too, are improved by a heavier vegetable diet.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Road Over Private Land

Two parties are joint owners of a ranch property. One of them leased a ranch to a party who now claims to have right of way across the ranch. Other parties seem also to desire such right of way. The owners are willing that they have the right to travel over the ranch but wish to avoid the possibility of this right at any time becoming vested. What shall they do?—Subscriber, San Bernardino.

A person who is a tenant does not as such tenant ever acquire any adverse right, title or interest in or to the property during the period of his tenancy, no matter how long it may be. The mere placing of a sign "Private Road" is not necessarily sufficient to avoid the possibility of a vesting of a right of way. The best method, and that usually followed, is to fence the land or place a gate across the right of way and bar the entrance thereto at least once a year. This is sufficient to publicly show that no right of way is granted.

Will and Deed

A husband dies, leaving a will in favor of his wife, stating that she is to take care of the minor children. He also made a deed of the property in her favor, which has not yet been recorded, and he authorized her to draw money from the bank. Will it be necessary to have the will probated or could the deed alone be recorded?—Subscriber, Woodlake.

For practical purposes it may be that the recording of the deed would be sufficient, as the wife and children are undoubtedly the only heirs and the only parties concerned. The rights of the children are cut off by the will mentioning them and giving all of the property to the wife.

Goat Not Paid For

In January I sold a goat. The purchaser paid \$5 and was to get it the latter part of January and pay the remainder. The purchaser has not paid up. Would she still have a claim on the goat, or would I have a right to sell it to someone else?—Subscriber, Woodlake.

If a buyer of personal property does not pay for it according to the contract and it remains in the possession of the seller after payment is due, the seller may rescind the sale or may enforce his lien for the price. If the buyer does not give notice as to time, place and manner of delivery within a reasonable time his right thereto is waived. In the instance stated your method would be to enforce your lien upon the property for the balance of the price, and in that respect you should give actual notice to the purchaser that the goat will be sold for the balance of the payment due at a certain stated time.

Water Right

I have depended for 30 years on the water of a creek flowing through my property for watering stock and have used the waters of this creek for irrigating purposes since 1897. This season my neighbors above, whose property corners on the stream, have built a dam sufficiently large to divert all of the water of the stream and the creek bed has been dry since the 22nd of July. Have they any right to do this and would I have ground for a damage suit against them?—Subscriber, Ballard.

It would seem from your statement of facts that you have acquired an unquestionable prescriptive right to so much of the water of this creek as you have placed to beneficial use for the watering of stock and irrigation, and that this right arises by actual appropriation as well as under your riparian rights in the stream and would therefore be superior to the rights of those holding lands above you on the stream to the extent to which you have placed the water to

General Motors Trucks

ON HIS 200 acre farm, near Hooper, Nebraska, H. S. Schultz is operating this GMC 1½ Ton Truck with profit and satisfaction.

In general work about the farm it is paying its way; it is saving time between the farm and Hooper or other neighboring points; hauling hay, grain, and other farm products.

Fitted with the stake body, it makes quick trips to market with live stock, delivering its load in prime condition, with practically no shrinkage.

Regardless of weather this truck is always on the job; in bad

weather the driver is protected by the all-weather cab; the pneumatic tires give the best traction on all roads.

Mr. Schultz bought this GMC Truck because it would render him the best service over a long period of time. He has looked further than the mere first cost.

He knew that cheap trucks have no place on the farm, where the most is demanded in service, and the ability to get there and back. He knew that in the General Motors Truck factory quality comes first. He knew he couldn't get more out of the truck than the factory put in.

Ask the dealer in your neighborhood to tell you more about GMC Trucks—why they give the greatest satisfaction on farms all over the country—or write to the factory for our book (C), "Motor Trucks On the Farm."

beneficial use. This being the case, you would undoubtedly have a right to enjoin the maintenance of the dam and recover such damages as have been caused to your crops and stock by reason of being deprived of the water. Under your statement of the facts, I can see no shadow of right which these parties may have to erect this dam, especially in view of the fact that under the act establishing the water commission it is expressly provided that all waters flowing in any channel, except those which have been applied to useful and beneficial purposes, are public waters of the state of California, subject to appropriation in accordance with the provisions of the act. These provisions require that the party desiring to appropriate such water shall make application to the water commission for a permit stating the facts in reference to the details of his proposition, diversion and purposes to which the water will be placed. Such permits are effective to the time for which water is placed to a beneficial use. It would probably be the quickest and least expensive action to make application to the water commission to ascertain the rights to the water in this stream. Upon the filing of this petition by you the water commission will thereupon ascertain the rights, take testimony and make a thorough investigation. After this investigation the water commission makes findings of facts, which

may be filed in the superior court and upon which action may be maintained therein. This, of course, is irrespective of your rights to bring an action for the damages if, upon careful investigation of the facts concerning any appropriations of the water by your entrance, such may be found advisable.

Excessive Fee

I broke my wrist and a physician to whom I went for treatment refused to give such treatment unless I sign an agreement releasing him from any responsibility for injury, stating that this was necessary in the absence of an X-ray picture of the wrist. The agreement was signed and I offered to pay for the services, but the physician suggested that that be delayed until the wrist got well. I never returned for further treatment until the wrist was completely well. The physician then charged me \$50, which I paid. Is it lawful for a physician to collect such a fee after demanding such a release?—Subscriber, Del Mar.

At the present time a skilled and careful physician in case of fractures in the joints, particularly such as the wrist, where there are a number of small bones, very prudently would require an X-ray to be made or otherwise he will be entirely in the dark in making treatment. He was within his rights in requesting the signing of the agreement stated. The matter of his bill is dependent upon so many factors, such as the skill of the physician, the character of the injury and other things, that it is difficult to say that it is exorbitant. In any event, if you desired to contest the bill you should have refused to pay it.

Broken Agreement

Under a will various parcels of real property are left to four children. Some of the property is incumbered. Another piece has a homestead on it. The father surviving agrees with the children with respect to a partition, and under the agreement the children make their deed to the father, who then refuses to carry out his part of the agreement. All of the agreements were made in the presence of an attorney and notary public. Is there action for fraud?—Subscriber, White Road.

You would undoubtedly have an action for the rescission of the conveyance to the father on his failure to carry out the terms of the agreement, but as to the particulars of such action you should consult a local attorney and lay all of the facts in detail before him.

License for Butchering

Is there any law prohibiting a man from purchasing beef, butchering and selling it to his neighbors outside of the city limits? Would it be necessary to have such meat inspected when it is not inspected at the meat market?—Subscriber, Escondido.

The state law requires every person slaughtering cattle as a business to do so in a designated slaughter house and first procure from the cattle protection board a license to carry on such business, and he shall execute a bond to the state of California in the sum of \$1,000. Such licensee must pay in advance an annual fee regulated by the number of cattle slaughtered per month, thus: slaughtering ten head per month pay \$1 per annum; from ten to 50 head per month, \$10 per annum. He also is required to make regular reports to the board concerning the cattle slaughtered, the owners and marks and brands thereof. However, the act provides that nothing therein shall be construed to prohibit an owner of ranch land or one located on a definite property as tenant or purchaser under contract from slaughtering cattle in small numbers on said premises for his own consumption, nor shall such rancher be construed as prohibited from selling or giving away a portion thereof, and it shall not be necessary for him to take out the license. Unless there is some city or county ordinance with respect to the inspection of meats, it will be unnecessary for such person to have such meats inspected, although under other acts he may do so if he so desires.

NATIONAL TRACTOR & IMPLEMENT SHOW OF THE WEST

Verdugo Woodlands

(GLENDALE)

Los Angeles, September 20 to 26

A Great Business Show You Cannot Afford to Miss

Displays of the latest, most improved tractors, trucks, implements and power farming machinery of all kinds. Many interesting and valuable accessories. Entertaining features for visitors.

More than 300,000 square feet of exhibits, including 30 or more improved tractors never before exhibited. It will be the first show of national scope ever held on the Pacific Coast. Thousands of visitors are expected.

The National Tractor and Implement Show of the West will be the great market place for buyers of modern power farming equipment. Make your plans now to be there. Enjoy the big show and the unequalled recreational advantages of Los Angeles and vicinity—combine pleasure with business.

EVERYBODY'S LONESOME

Way down deep within their hearts
Everybody's lonesome.
Far within their secret parts
Everybody's lonesome.
Makes no difference how they smile,
How they live or what their style;
Once in every little while
Everybody's lonesome.

People first in big affairs—
Even they are lonesome;
Maybe like to put on airs,
Just the same they're lonesome.
Men for whom existence blends
Every good; who gain all ends,
Still reach out their hand for friends;
Everybody's lonesome.

Women, silk-clad, jeweled fine,
Yes, they too are lonesome;
When their gems the brightest shine
They are just as lonesome;
Some must serve and some command,
All still seek with groping hand
Love and friends who understand;
Everybody's lonesome.

Though your gift of friendship small,

Everybody's lonesome.
It may answer someone's call,
Someone who is lonesome;
Give, and give with might and main,
Give your hands, and join the chain,
And your gift will be your gain.
Sometime, when you're lonesome.
—Exchange.

THE LAST RESORT

By Rowland Thomas in Youth's Companion

STANDING on the concrete walk that rings the Waldron swimming pool, Bob Moray gazed down into the water. This open air, salt water pool, 50 feet wide, a hundred feet long, four feet deep at one end and eight feet at the other, is the chief attraction of Waldron's Mammoth Bathing Pavilions at Kingsbury Beach on the Jersey coast.

Not a hundred steps east of Waldron's there is another outdoor salt water swimming pool, which is 3,000 miles wide and 10,000 miles long—the Atlantic Ocean.

When you stand on Waldron's walk, just where Bob stood that Friday morning in August, and find yourself looking up and down ten or 12 miles of fair, smooth sand fringed with half a dozen ribbons of white breakers, this swimming pool seems like another case of carrying coals to Newcastle. All summer long thousands of bathers brighten the beach with gay flecks of color, and there is room for countless thousands more. At first sight Mr. Waldron's attempt to compete with the Atlantic Ocean seems hopeless.

Nevertheless, there are many people who find all their aquatic pleasure in the pool and who never even wet their feet in the ocean. The reason is simple. The surf at Kingsbury Beach looks soft and creamy from a distance, but it has a boisterous scend to it and a famous undertow. For weak and timid bathers and for novices the pool, with its quiet, warmish water and its immaculate lining of white tile, is far more pleasant.

The porcelain lining of the pool is the pride of big Mr. Waldron's heart. To keep it shining he goes to no little trouble and expense. Twice each week he has his pool emptied, scrubbed and filled again.

It holds 225,000 gallons—an impressive amount of water—but the process of emptying and filling it is fairly rapid, for the pump that fills the pool discharges 500 gallons every minute, and the big iron pipe that drains it into the sea, 200 feet away below low water mark, is 15 inches in diameter. For scrubbing there are six men armed with wire brooms and swabs of coir. Yet with all that it is an all day job—12 hours—to clean the pool and fill it up again.

This Friday was to be such a Gargantuan scrubbing day. The valve in the drainpipe had been open for some time, and the level of the water had already subsided a foot.

It was Bob's second season as one of the attendants at the pool. He was 18 years old, not very large, but strong and lithe, deep through the chest and brown as the traditional berry. All summer long salt water was drying on his skin through the sunlit hours, and his clothing was a bathing suit. Except that the chest of the jersey bore no magic letters, that suit was a replica of those worn by the life guards who stroll the beach in muscular majesty. It might have given an observant person a clue to Bob's ambition. He scrubbed Waldron's pool, fetched buckets of fresh water for sandy footed occupants of dressing rooms, wrung out soggy bathing suits, not because he liked it, but because he knew that it was a first step along the road of his ambition.

Bob wished to be a life guard. He was a natural swimmer, and incessant practice had perfected him in the art. He had speed, strength, endurance, fearlessness. He knew that he should make a good life guard. In his mind's eye he could already see himself the hero of marvelous feats of rescue. All he needed was a chance.

But that was the hardest of all things to get. The life guard service at Kingsbury is a close corporation. Its membership is made up of young college men—athletes of note—who manage in that way to earn money

At Apple Picking Time The Auto-Wheel Coaster

It's no trick at all to haul four or five bushels of apples in the Auto-Wheel Coaster

Pile them on and see how easy it is to carry them to the storehouse. The job will be finished before you know it. The roller bearings make the handling easy. Even if you load 1,000 pounds on the Auto-Wheel it rides smooth.

Every minute saved in the field gives you that much more time for play. And you'll find the Auto-Wheel just right for play. You can coast, have races and do odd jobs. You can earn all the spending money you need.

Then, you can enter some of our prize contests. We hold them regularly—and offer prizes that all fellows are anxious to win. Send for our magazine "The Auto-Wheel Spokesman." We'll send it to you for six months FREE. Just send us the names of three coaster dealers in your town, telling which handle the coaster wagons with the name "Auto-Wheel" on sides.

Can you move your finger up and down 10-times in a second?

THE trained pianist can do this. So can the Manualo. It moves its little air fingers that operate the keys as fast as any pianist. That is one reason why the Manualo enables you to play as beautifully as a talented performer and gives you the genuine satisfaction of playing a musical instrument.

Baldwin Manualo

The Player-Piano that is all but human

You should know all about these wonderful air fingers and the many other exclusive features of Manualo design. Our books give you complete information on player-pianos and pianos. They explain clearly why one player-piano is more satisfactory than another—why some pianos retain their tone quality while others deteriorate.

Send for these books and you will know how to select a piano or player-piano

during their long vacations. When undergraduate days are over they bequeath their places to others of their kind. In the chain of succession, for two summers, no links had broken or been missing, and Bob had had to bide his time and hope for better days.

He was thinking of all that as he stood on the walk at the deep end of the pool. He was alone and in a way on guard, although the watch he kept was perfunctory. Everyone at Kingsbury Park knew that Waldron's pool was closed on Tuesdays and Fridays. To make assurance doubly sure, on those days ropes were stretched across the two runways that led up from the beach, and on each rope was hung a sign that proclaimed in large black letters, "No passing. Danger! Pool being cleaned." But wishing to take every possible precaution, Mr. Waldron always had one attendant on duty as a watchman until the pool was empty. He had a wholesome respect for the forces that he put in play when he opened the valve in that 15 inch pipe and set 225,000 gallons of water free to find its level.

He knew that he was releasing a dead weight of two million pounds from all immediate control. He knew that the water rushed through the drain at the rate of 1,800 feet a minute—faster than a man can run. He knew that there was a tremendous suction at the mouth of the pipe in the deep end of the pool. A swimmer caught in such a current would be in sorry plight. Although Mr. Waldron was not imaginative, he could picture it in terms of tragedies and damage suits. So he hung up his signs and put his man on guard.

Even Bob Moray guessed something of it as he watched the water. The morning was windless and the pool was very still. At first sight only a few ripples seemed to mar the perfect mirror. But as he looked closer, it became apparent that the whole body of water was alive with silent but relentless motion. Thousands of hair lines

veined its surface and its depths. All of those lines radiated from a common center—a point directly above the black mouth of the drainpipe. No whirlpool had formed yet—only those crawling, creeping veins showed the tremendous force that was at work. The very placidity of the water fascinated you—and made you shudder.

As Bob stood looking down into the water, a sudden stir across the pool—a light patter of steps and a gay "Good morning!"—roused him. He glanced up with a start. On the opposite rim of the pool stood a scarlet sprite of a girl. Bob knew her. It was madcap Margery Deane, 16 years old, pet of the more permanent residents at the park. She was poised for a dive.

Instantly Bob shouted, "Keep back! The suction will catch you if you go in there now!"

She laughed carelessly. "You can pull me out of it!" she cried, and the next moment, to Bob's horror, she was in the water.

Her dive was clean and long. She rose, shook the water dog fashion from her eyes, and struck out.

Her first few strokes were easy and quite ineffective. Surprise replaced the laughter on her face, and the surprise quickly changed to worry. "I can't seem to swim!" she said, looking up at Bob. "Something's dragging at me."

Bob knew only too well what it was that was dragging at her. He did not hesitate. Glancing up the length of the walk, he saw that it was empty. The scrubbers, with their swabs and brushes, would not come until the pool was empty. He shouted lustily in the hope of attracting help, and as he shouted he plunged. Almost at once he rose beside the girl.

Fortunately, Margery was a good swimmer. She kept her head and listened comprehendingly to Bob's commands.

"Hands on my hips!" he ordered. "Breathe when you can, and roll with me. The trudge's the only thing that can dig us out of this."

With the girl trailing half submerged at arm's length from his hips, Bob began the fight. The trudge, for a master of it, is probably the most powerful of all strokes. Bob swam it well always—but never before as he did then. Into the roll, the tremendous heaving catch of arms and shoulders, the incisive scissors kick, went every ounce of energy in his body.

But from the first stroke he was helpless. Plunge ahead as he would the suction pulled him back. As for help's coming from outside, he realized that even if any of the workers had heard his cry they would arrive too late to aid him. Faster than they could run, that current was sweeping him and Margery back and down.

For an instant a hideous picture flashed before his mind. He could already feel himself and the girl dragged under—could feel the agony as they were pinned across the mouth of the pipe—wrenched, mangled, twisted until slowly their bodies were sucked in.

Sucked in! With that, Bob's brain cleared for action. So far he had been fighting only with his muscles.

Once, the summer before, as Bob had stood on the walk waiting for the pool to drain, a problem had presented itself to him and he had whiled away half an hour in trying to solve it. Suppose, the problem ran, you are in the pool now. The suction gets you, and the water has fallen so far that there are no handholds for you on the gutters, even if you could swim to them. And there is no one round to help you. How would you save yourself?

Bob had turned that problem over in his mind for almost 30 minutes before he could see any solution. And that solution had been preposterous—so mock heroic that it had made him grin, so absurd that in another half hour he had forgotten it along with the problem. So far as he knew, he had not thought of it since.

But now, all at once, it flashed back upon him. It was the same problem, complicated by the fact that now there were two persons in the pool. The solution no longer seemed preposterous. It seemed hideous. Instead of making Bob grin it sent a shiver of dread through him. But—it was a solution. Was there another?

His strength was going. He glanced up once more. No help was in sight. The water seemed to be dragging at him even harder than before. The

Renew the Power of your Engines for next Season

After a season's hard work most gas engines need new piston rings. They wear out just like any other moving part.

Worn or imperfect piston rings not only waste fuel by allowing it to leak past them—but waste power, which is more important. The gas that leaks past poor piston rings can never be power.

Examine your piston rings now. If you need new ones—buy McQuay-Norris LEAK-PROOF Piston Rings—which have increased gas engine power, saved fuel and oil and decreased carbon for ten years.

Your dealer has these genuine, time-tested rings or can get you proper sizes promptly from his jobber's complete stock. Made in every size and over-size for every make and model of gas engine.

Write for this Booklet

which explains why worn or imperfectly designed piston rings waste power and money. Address Dept. AB

boy's jaw set with grim resolution. "Margery!" he gasped. "You've got to do just what I say! It's our only chance. When I sink under you and grab your ankles, let yourself go limp. Stay limp and put your arms straight up over your head. Whatever you do, don't struggle."

He looked down through the water. Below and a little behind him gaped the dark mouth of the drainpipe. Fear

be fine. So many recipes call for a large quantity. I had so many failures until I used this that I thought perhaps it might help someone else.

Put little cucumbers in weak brine over night. In morning drain and then pour scalding hot water over them and drain again.

To one quart can use 1½ pints of vinegar (not too strong), ½ cup or more sugar, 1 rounding tablespoon

Markets on Pages 302-303

and desperation filled him. What he was asking his body to do was almost more than flesh could submit to. That pipe was only fifteen inches across and it stretched away for 200 feet. But what other chance was there?

With an inarticulate prayer, Bob let his feet drop. He shot down instantly. As he swept by Margery's body he seized her ankles in a vise like grip. Then darkness closed about them both—darkness and roaring and the insistent tugging of a frightful force.

Seven seconds after Bob's feet were sucked into the drainpipe of Waldron's pool he and Margery were floating in the surf; several exceedingly startled bathers were collecting their scattered wits sufficiently to go to their aid. Bob could see very watery daylight, and swam feebly. The girl had fainted.

It was an experience that neither of them is likely to forget—Bob for several reasons. One of them is this: when next summer comes the magic letters that proclaim him a life guard are to adorn his jersey. The people of Kingsbury Park, residents and visitors, seem to regard him as a very dependable young man. Bob himself says modestly that he merely did the only thing there was to do.

HINTS FROM HOUSEKEEPERS

Sweet Corn Salad

15 ears sweet corn, 1 head cabbage cut fine, 4 green peppers, 1½ cups sugar, 1 tablespoon salt, 2 tablespoons mustard seed, 2 quarts vinegar. Cook corn and cabbage separate, then mix well, heat and seal in jars.—La Verne.

To Dry Sweet Corn

Have a kettle of boiling water and put corn (on the cob) in the water and let remain three minutes, take out and dip in cold water. Then cut corn off the cob and spread in the sun to dry.

Dill Pickles

Put cucumbers in brine made of 4 quarts water and 1 quart salt. Let stand 24 hours, weight to keep in brine. Remove from brine. Put in crock one layer of dill on bottom, then layer of pickles. When half full another layer of dill and then pickles and layer of dill on top. Cover with a brine made of 1 quart vinegar, 1 quart salt and 4 quarts water. Boil together five minutes; let cool and pour over pickles. Cover with grape leaves or beet tops.—Housekeeper, La Verne.

Baking Pie Crust

To prevent pie crust from shrinking away from the edges of the pie tin when browning before custard or fresh fruit is put into it, the dough should be placed over the top of an inverted pie tin. Perforate the dough six or eight times with a fork before placing in oven to prevent the forming of blisters. When crust is brown enough carefully remove it from the tin, place inside and fill.—F. K., Los Angeles.

Panama Cream Filling

Another recipe for Panama Cream filling is as follows: 1 cup pulverized sugar, butter size of a large walnut (or more if desired). Mix together until creamy. Add water (or milk if preferred), a few drops at a time, until thin enough to spread easily over cookies. Add ½ teaspoon vanilla extract. If mocha flavor is desired two teaspoons cocoa may be creamed with the sugar and butter and hot coffee used in place of the water or milk.—F. K.

Crisp Cucumber Pickles

This is a recipe for small cucumber pickles that I use, and they prove to

mustard, 1 tablespoon mixed spices. Heat, add pickles and when scalding hot can and seal. The mustard keeps them crisp. You can mix your spices if you wish.

The pickles never fail to be good, made with this recipe.—Mrs. J. F. C.

TIME TO PASS THE APPLES

"It was while eating apples," said Mr. Hilbert, former M. P. in Canada, "that Eve discovered that she needed clothing. As far as I can see it is nearly time to pass the apples again."

CUSHMAN

Light Weight Farm Motors

Weigh only 40 to 60 pounds per horsepower, about one-third as much as ordinary farm engines, yet are more powerful, more durable, more economical.

We get increased power without increased weight because of an improved design, better material, higher grade mechanics, accurate balancing and improvements in carburetion, ignition and lubrication.

4 to 20 H.P.

Because of their light weight, and also because they can be run at various speeds, Cushman Motors are known as All-Purpose Engines. They not only do all stationary jobs, even more satisfactorily than ordinary engines, but they may be attached as power drive to such machines as harvesters, hay presses, corn binders and pickers, potato diggers, etc.

8 H.P. Double Cylinder

Cushman Motors are equipped with an accurate Throttling Governor, Carburetor, Friction Clutch Pulley and Water Circulating Pump, without extra charge. (310)

Mitchell

Extra Room and Comfort in each New Mitchell Model

New body design gives roominess

You can judge car comfort largely by whether they are roomy or crowded. For this decides whether there is a generous or skimpy policy behind the car.

Mitchell models typify Mitchell policies. They are extra roomy, extra comfortable. The Mitchell Touring Car seats six instead of five. The Road-

ster seats *three* instead of two. The Sedan seats *six* instead of five. The Coupe seats *four* instead of three.

This is due to designing and building our own bodies. We can afford to put in extras because we do not have to pay profits to outside builders. You get that money.

Make a thorough examination

Generous proportioning is evident throughout all New Mitchells, in the chassis as well as in the body. Ask a Mitchell dealer to point them out. You can never know the real worth of this car until you examine it and contrast it with other cars of the same price or more.

Where can you find a car offering so much at these prices: *six* passenger Touring Car, \$1750; *six* passenger Sedan, \$2,900; *four* passenger Coupe, \$2,800; *three* passenger Roadster, \$1750. F. o. b. Racine, Wis.

Before you decide upon your car, just make a comparison.

Revised Dosage Schedule for Use of Liquid Hydrocyanic Acid Gas

ARE scale pests becoming resistant to fumigation gas? Formerly the citrus grower fumigated his orchard every two or three years; today he finds it necessary to fumigate each year and in addition is finding lower "kill" than formerly. This "resistance" seems to be more

for large trees remained almost the same as in the original schedule prepared for use with gas generated by the pot or machine method. The past season's experience with liquid hydrocyanic acid of uniformly high purity has shown that the tendency of gas generated by the atomizing process to

(DISTANCE OVER IN FEET)

manifest with black scale and today the grower is asserting that the worst pest in California is the black scale.

In his investigations Professor Woglum has found a slightly heavier dosage necessary for the larger trees. Hence this new schedule where liquid hydrocyanic acid of 95-98 per cent purity is used. Professor Woglum says:

"A tentative dosage schedule for liquid hydrocyanic acid in orchard fumigation was prepared by the United States department of agriculture in 1918 and has since experienced two seasons use. In this schedule the dosages

remain most concentrated toward the bottom of the trees necessitates a material increase in the dosages for large trees over those given in the former schedule.

"To meet this need a revised schedule for liquid hydrocyanic acid 95 to 98 per cent pure has been prepared and is presented herewith. It has been developed in cooperation with Mr. Rounds and Professor Quayle and made to conform with the experience of the expert fumigators of Southern California. Its universal adoption during the present season is strongly recommended."

Firestone

EXTRAVAGANCE has gone by the board. Thrift is in the air. Men are buying where the value is.

The Firestone thrifty 3½ is leading the small-tire field today. Because it is built on real thrift methods from start to finish.

Firestone experts on the spot in the raw material markets of the world are able to get first choice of quality at quantity purchase prices.

Firestone men have worked out the way to produce this tire by concentrated methods—no waste material, no waste motion, no waste space.

And Firestone volume output, through thousands of dealers, permits selling at a close margin. The user gets the benefit. Try this Firestone thrifty 3½.

California Cultivator

Vol. LV, No. 11

Los Angeles, September 11, 1920

One Dollar Yearly

THIS is one great fair. I mean the sixty-first California State Fair, in full swing this minute—this whole week—in the "Heart of California."

The livestock men say "The equal in pure breeds was never brought together on the Coast." Royce, Hughes, the Bennetts are on the job for the California Cultivator and will tell about it next week.

Farm power, tractors, trucks, implements, farm appliances make up a wonderful exhibit. "Wonderful" is somewhat of a bromide and thrown in

As Usual--The Best Ever

By C. B. Messenger

at all times in describing everything, from corn remedies to Yosemite. However, it still applies in its true sense to this exhibit. Not in the same degree as when applied to Yosemite's wonders, but when one walks some 500 feet down one of the aisles of the monster tent and then turns and looks back he wonders at the work of the

inventor, at the promise of mechanics, of gas, of electricity to help feed a hungry world.

One old fellow—New Englander, I think—reached the other end as I did. He turned and gazed over his specs and ejaculated, "Well, by gosh!" I don't know what "by gosh" means, but it is effective.

It's also a washing machine fair. There are washing machines here which will take hold of soiled duds and suds and pat and punch and pummel and twist and untwist and souse and wring and iron—all electrically—while Bridget is at the movies and Mother rocks the baby and Daddy's gone a-huntin'. If any doubt as to these details, ask the agent.

The university, the experiment station, land settlement, the farm bureau—all here. In the farm bureau tent are a couple of home made evaporators.

(Continued on Page 339.)

Orange Orchards at Porterville

By Ernest Braunton

THE Porterville section of Tulare County has some good slogans. The secretary of the chamber of commerce, H. L. Morrison, brags about "A valley city with a mountain air;" the orchardists' claim is, "The home of the early orange." The truth of both slogans is apparent to the observant visitor, and if he lingers a few days or more he may be impressed with a third, "The Valley of Content."

This section is noted for its variety of subtropical fruits, but the writer was on the trail of oranges so rode

destroyed no injury from mice has been experienced. The Robinson grove was in prime condition and is being treated under the direction of Dr. Bonquet, county pathologist. The heavy pruning, so disastrous to many orchards, has not been practiced, and the trees are apparently in as good condition as any in the Porterville section. The 18 year old Marshall orchard was tramped through from end to end. This orchard has received six copious irrigations each

plenty of nitrogen is present at any depth but unavailable because of the nearly air tight plow sole preventing nitrification below.

Dr. Bonquet believes in very deep dry plowing in the fall to allow entrance of air and water and this practice will also keep sticky soils open and warm, so the trees will function early in spring. Do not plow deep in spring or you shock the tree just when it wishes to grow and needs all its vigor. If plowing is done in fall the tree has ample time to recover before it should function in spring. The irrigations given are also too in-

150 pounds of sulphuric acid to the acre mingle with the water and use the same amount in a second irrigation. This treatment would keep the soil open so it would not again become sticky for at least two years. It would also liberate all carbonates, converting them to sulphates, and work many lesser benefits.

The writer has seen no orange growing section where orchard practices vary so widely as here. As examples illustrating this and showing the necessity of varying methods of treatment two young orchards may be cited. The trees from both came from the same nurseryman and of the same stock. Both started out well but the trees grew much unlike under

Overhead Irrigation on Robert Baird's Winterhaven Ranch

Mr. Baird has many acres of the ranch covered with perforated pipe. The installation on about 50 acres cost \$10,000.

out to the Baird orchard where a portion is under the overhead Skinner system of watering, one of two thus equipped, the other being the Overholtzer grove near Covina, Los Angeles County. The writer had visited this orchard eleven years before and was impressed with the steady, stable growth made during the intervening years. The soil is very black, heavy, and rich. The Wilson grove, owned by a Los Angeles man, was being sprayed for red spider, more as a preventive measure, though some "spider" was present. It is evident that more attention should be paid to the general control of this pest for the most infested tree the writer saw was a large walnut in one corner of an orange orchard and it had not been treated for spider.

One orchardist was much troubled with mice, due, evidently, to dry mulch about the trees and over the orchard generally. Where the mulches have been turned under and grass and weeds along the orchard boundaries

year but on account of the heaviness of the soil the owner does not believe the water penetrates deeply enough and is now experimenting with deep furrows down the middle of the spaces and will trench a few trees with shovels to learn if benefit is to be derived from deep stirring.

Soil Practices

On the 18th of August the writer attended a soil lecture and demonstration by Dr. Bonquet, pathologist for Tulare County, in the orchard of Robert Baird, but two miles from Porterville. Here the soil is black, heavy and inclined to be "sticky" when moist. From frequent disking and tramping there is a firm plowsole five or six inches below the surface and about the same number of inches thick. Below that the soil is softer and more yielding. The moisture content is uniform throughout. From the rank growth of weeds it is evident that the soil is rich in plant food in the few surface inches at least and heavy in nitrogen. It is believed

frequent and soil gets too dry at times. Now is the time when the trees are doing the main work for next year's crop.

Dr. Bonquet would subsoil 14 inches deep in one furrow midway between the trees and run a big single shovel through to clean out the ditch. He would then plow two furrows on each side to fill this ditch and irrigate through the last furrows. This would fill a large and deep mass of soil with water, following aeration. At the sandbox or some equally good place for incorporation he would let

similar treatment. According to accepted standards and illustrations in recent bulletins one orchard was quite ideal. In the other nearly all trees were of poor types. This could not have been true as both lots were of same stock. The soils were radically different and it is a puzzling question as to what treatment should be given when results of similar care cause such a variance in growth and condition. The writer did not see the groves in question but the facts here recorded were related by a Porterville orchardist.

Discussing Humus and Soil Treatment

This photo was taken early in July with the Cultivator camera and shows one method of soil treatment followed by Robert Baird of Winterhaven Ranch, Porterville. Mr. Baird is the taller man in white shirt. At his right stands Dr. Bonquet; next him, C. Frank Rossire. Mr. Rossire Jr. is also listening in. Mr. Baird has consistently followed in this particular plot the practice of encouraging growth of natural weeds and grasses during the winter. This ground is disked lightly but there is no attempt to plow under the heavy growth.

The hot weather of the last month has been just what the rice fields needed.

The state board of health is prosecuting its campaign for stamping out malaria.

Some 300 acres of pickling cucumbers are grown in the Corning section of Tehama County.

The California Bean Growers Association held its annual meeting at San Francisco August 26.

President Walker of the State Farm Bureau Federation makes address at Humboldt County fair.

Rice men are planning early stoppage of rice irrigation so as to aid irrigation on the lower river.

Chicken culling demonstrations have been held by the Butte County farm bureau on many farms in the county.

The Durham colony in Butte County held community fair August 28 and 29. Stock exhibits were made the feature.

Airplanes are being built near Gridley in Butte County for a proposed San Francisco-Portland passenger service.

The Glenn County farm bureau lumber mill has already produced 600,000 feet of lumber for the use of bureau members.

The Glenn County Duroc-Jersey Swine Breeders Association will build an advertising booth and rest room at the Orland fair grounds.

Many plans are being made for a comprehensive means of irrigation which will care for the needs of the upper Sacramento Valley.

Livestock auctions are to be held by the Farm Bureau Marketing Association in Willows, Orland, and Red Bluff the first week in September.

The Native Sons held an anti-Japanese meeting at San Francisco September 2 at which representatives were present from many state bodies.

Towns in Contra Costa County have been put on water rations because of shortage of irrigation water. Martinez especially has been reduced by at least 100,000 gallons daily.

The first shipment of 1920 almonds from the Chico district was on August 20 and was shipped through the Almond Growers Exchange. The crop will be but little more than 60 per cent of normal.

Central California

Turlock is still shipping Thompson Seedless.

Fresno County's assessment valuation is \$153,232,484.

Some figs have been injured by the recent untimely rains.

Northern Kern County is harvesting \$75,000 worth of cotton.

Western Fresno County reports Emperor grapes showing mildew.

Kern County Cotton Festival scheduled at Bakersfield, October 16.

Prof. J. E. Coit is investigating as to split figs, the cause and remedy.

Dr. Bonquet of Tulare County is planning lecture tour in the South.

San Jose's retail milk price is now 9 and 15 cents for pints and quarts.

Lodi, San Joaquin County, bricklayers are demanding \$16 per eight hour day.

Merced County has shipped out as high as 18 carloads of packed peaches a day.

Apple growers in the hills back of Visalia have been selling apples at \$90 per ton.

San Joaquin Valley cotton growers are discussing cooperative ginning and marketing.

Modesto fig growers made a tour of fig orchards and packing houses of Fresno recently.

The Miller & Lux Company has increased its capitalization from \$12,000,000 to \$15,000,000.

California Peach Growers, Inc., started shipments on the present season's crop August 24.

San Jose Grange is appealing to its members to take interest in primaries and all political movements.

Merced County poison barley squirrel campaign resulted in the use of nearly 25 tons of poisoned barley.

Monterey canners have agreed to pay women a minimum of 40 cents per hour and laborers four cents per case.

Mountain sections of Stanislaus, Tuolumne and Calaveras Counties are appealing for help in fighting forest fires.

The Citrus Association packing house at Lindsay has been remodeled and equipped so that it will be able to ship out fruit much more rapidly.

Santa Cruz and Monterey Counties have been discussing matter of growing beans and have concluded that they cannot compete with the Oriental grower.

Chowchilla dairymen recently met and discussed San Joaquin Valley Milk Producers Association. They are in favor of merging the dairy business of the San Joaquin Valley.

Kern County farm center meetings: Delano, September 13; Old River, 14; Wasco, 15; Rio Bravo, 16; Edison-Fairfax, 17; Mountain View, 20; Pond, 22; Inyo-Kern, 23; Rosedale, 24.

California farm bureau sold last year in excess of \$3,000,000 worth of products through its marketing bureau and perhaps another \$10,000,000 through other pools and associations.

The Hanford fat hog auction was attended one day last week by representatives of the farm bureaus of the Middle West, who represented many states from California as far east as Ohio.

Southern California

Escondido schools open September 13.

San Diego County fair is offering \$5,000 in cash premiums.

Early dates are coming into the market from Coachella Valley.

Brawley is appealing for the holding of an Imperial Valley fair.

Anaheim will exhibit at Orange County fair at Huntington Beach.

Cotton picking is the main business on hand in the Palo Verde Valley.

Thermal's cotton gin recently installed will be ready for the new crop.

Fire recently destroyed gin at Calexico and cotton to the value of \$20,000.

Garden Grove will make exhibit at Orange County fair at Huntington Beach.

Blythe will have next year a new cantaloupe packing house built by a Japanese firm.

Imperial Valley is appealing for relief from the manipulation of cotton prices by gamblers.

Escondido is sending out carload shipments of grapes; also making heavy shipments of hay.

An effort is being made to secure 10,000 Mexicans to cross the line and aid in the cotton harvest.

Fallbrook, San Diego County, has sorghum mill which is now reducing sap of the sweet sorghum.

Imperial Valley Vegetable and Melon Growers are pushing the formation of their marketing association.

Orange County sugar beet workers are striking for higher wages. This is preventing rapid harvesting.

One Los Angeles County grower of Turkish tobacco estimates that he will produce about 800 pounds to the acre.

Imperial and Coachella Valleys were recently visited by a thunder shower which did slight damage to hay and grain.

There is a general movement throughout the state to reduce the damage done by overloaded trucks to highways.

Yermo in the Victor Valley has been trying out cotton and finds it produces exceptionally well of high quality fiber.

Orange County harbor commission is now working with the \$500,000 fund in deepening the Santa Ana River channel and building jetties.

Horticultural commissioners of various counties of the south are in trouble because of inspectors resigning to accept more lucrative jobs.

Perris Valley's cotton planting experiment has proved only moderately successful, this largely because of inexperience of the growers. The work will be continued another year.

The appeal made by citrus growers to the interstate commerce commission for reduction in freight and refrigeration rates was denied as to freight rate but granted as to refrigeration charges.

The Claremont Citrus Association in annual meeting elected W. O. Fritz, president; C. D. Baker vice president; R. K. Pitzer, L. E. Sheets, and F. R. Willey, directors; Fred C. Jacobs, secretary and manager. Its total business during the past year was \$452,714 paid to growers. It shipped 367 cars.

The Coast and General

Wyoming reports ranges good to excellent and livestock fine.

Montana reports frost in the last week of August which nipped tender vegetation.

Navajo Indians may be brought down from the northern reservation in Arizona to pick cotton this season.

According to the report of the weather bureau at Phoenix, the number of hours of sunshine during the month of August was 367 out of a possible 414, or almost 90 per cent.

Two hundred cotton growers of the south side of the Salt River Valley, Arizona, at a recent meeting in Mesa, have set the rate for picking cotton for the present season at four cents a pound.

A plan for merging the Mesa Cotton Growers' Association and the Mesa Farm Bureau Federation into one organization has been proposed at a meeting of cotton growers of the Mesa, Arizona, district.

An informal investigation is being made of a project for the development of 15,000 acres of land in the vicinity of Winslow, Arizona. This land is along the Little Colorado, a tributary of the Colorado River.

The proposition has been advanced to move the office of the Southwest League to Phoenix, Arizona. Inasmuch as the largest area of land to be developed from the Colorado River is within the state of Arizona, this might be feasible.

Cotton growers through central Arizona are attempting to regulate the price which will be paid for cotton pickers this season. This is being handled quite largely through the local farm bureaus and the cotton growers association.

Artesian water was unexpectedly discovered in the vicinity of Aguila, Arizona. If further developments show that there is a considerable quantity of water this may be of considerable importance in the development of the county in that vicinity.

A strong effort is being made to interest farmers in the growing of broom corn in Arizona. Good broom corn is bringing \$100 to \$325 a ton, and one-half to one ton per acre is the average yield. A farmer in New Mexico claims to produce three crops in one season on the same land.

Representatives from the Arizona Horticultural Association and others interested in control of cotton pests attended a big meeting of cotton growers in Los Angeles. The matter of most interest to the Arizona cotton growers and the horticultural association is the matter of quarantine provisions looking to keeping out the cotton boll weevil or the pink bollworm.

Secretary F. E. Schneider of the Arizona Cattle Growers Association, considers the outlook for stockraising not as bright as it might be. He says: "The average price paid to producers for meat animals and poultry on June 15, was 18 per cent less than a year ago, 10 per cent less than two years ago and only 39 per cent higher than the ten year average. It is quite evident from these figures, which are verified by the federal government, that we are now in the midst of the lowest meat prices we are likely to have for years to come."

Humus and the Cover Crop

By E. L. Koethen

SOILS of the arid region are of necessity deficient in humus content. Under our methods of irrigation and cultivation this deficiency is increased unless some method is adopted to renew the supply. In the case of orchards which are kept under clean culture throughout the year where new portions of the soil are continually being exposed to air and sun, combustion is aggravated and great losses of humus ensue. This in addition to the fact that there is no new supply from the natural growth of weeds. But why is this of so much importance? Why is so much said about the humus supply?

Without going into the scientific discussion of what humus is, let us assume it to be just decaying or already decayed vegetable and animal matter, what we call organic matter to distinguish it from the mineral matter which otherwise makes up the soil bed. Without this organic matter the soil is dead, inert, lifeless. Its functions are complicated and might be divided into three classes—mechanical, chemical and bacteriological.

Its mechanical effect is to help break up the soil into small particles and make it more friable. A soil that is rich in humus feels velvety, pliable and breaks up nice and mellow. It is capable of holding more water in suspension. It is more spongy. Its flocculence also makes it open to the percolation of air which is very essential in the processes of most plant growth. The air also assists in the chemical action, which is equally essential.

The chemical action in the soil is very complex, much more so than the writer is capable of treating. But

in a few words it may be said that humus in itself contains an acid called humic acid. This is capable of dissolving otherwise inert substances in the soil which are essential to plant growth. Of these the most important are phosphoric acid and potash. We are told that our soils in this region are mostly rich in potash, for instance, and yet it has often been found that applications of available potash salts have increased the productiveness of the orchards even where very large supplies are present in an unavailable condition. Now it is apparent that if by increasing the humus content this potash can be made available it is foolish to apply expensive potash salts where for many other reasons the humus is essential for best results. Lastly, the life which is put into the soil by the addition of organic matter is of prime importance. The soil bacteria which are nature's own method of giving life to the soil can only live and act in a soil where this organic matter is present. It is these organisms that convert unavailable food materials into available ones. The most important of these are the nitrifying germs. Soil rich in humus is a working laboratory of chemical action providing the moisture content is maintained at the best condition.

Here, then, we have the necessity for this large humus content in our soils. But where is it to come from? It is manifest that with the gasoline drawn vehicles and tractors the production of manure is reduced. The demand is far greater than the supply. Hence the prohibitive cost of such material. The cover crop is the natu-

ral solution of the problem. Grow your own organic matter in the orchard. As the legumes produce atmospheric nitrogen, by all means use a legume. Of these for the winter cover crop the Melilotus Indica has proven itself by far the best up to date. It is free from diseases and insect attacks; is an arid plant that stands our climatic conditions exceptionally well, and though it requires lots of water to make a maximum growth, it produces fairly well on smaller amounts. There is quite a call for purple vetch created by the experiment station reports of its value, a demand that cannot as yet be supplied. It still remains to be seen if it will remain immune from the attacks of aphids which crowded the ordinary vetch out of use. For a time the latter was very popular and successful, but after a few crops the lice increased so that they killed the vines out and very unsatisfactory results were obtained. It is found now that at first the ordinary vetch gives good results, but in time the lice multiply so that the entire crop becomes a victim to their ravages. If not the second year, it may be the third or fourth. Will it be the same with the purple vetch?

The use of the winter cover crop has gone far beyond the experimental stage. There is no longer any question of its value and availability under ordinary conditions. It is true there are locations where the water supply is inadequate for its use. The usual objections that are made against it, however, are not valid. Some say it makes too much trouble. We cannot

see how this can be, as it cuts off the work in the orchards during the fall and early winter months. But with the modern tractors and double disks and disk plows there should be no trouble in getting it under. It is true that injury has been sustained to orchards from letting the work go too long in the spring. But it should be remembered that no matter how short the growth it has made when March comes, it should be put under and the orchard cleared for fertilization and cultivation in anticipation of the orchard carrying the greatest load of the season during the blooming and setting fruit season. Some have asserted that it increases the exposure to frost, but this is not borne out by the real facts. If the cover crop is kept wet, as it should be during the cold snaps, it will temper the atmosphere instead of lowering it. It adds vapor to the air and causes white frosts instead of black ones. Black frost is not so apparent to the eye, but it is far more trying to the orange tree.

There is no reason why the picking should interfere with the growth of the cover crop. The melilotus stands an immense amount of tramping without injury.

The use of the summer cover crop has not been as well established and is still in the experimental stage. Which plant is best. Will it interfere with the best growth of trees? Will it draw nourishment from the growth of the trees during the growing season? are all questions still unanswered to the satisfaction of many. It is maintained by some that it cools the surface during the hot days and maintains an even temperature than the bare land, but even this is still experimental.

Petaluma the Poultry Capital

By Arthur L. Dahl

ALL the eggs produced in California do not come from Petaluma, for the Golden State is as healthful for chickens as for children, and the annual crop of "hen fruit" in the state amounts to the tidy sum of \$18,000,000, but there are more chickens to the square yard in the Petaluma district than can be found in any other community in the world. In 1918 this district in Sonoma County produced 450,000,000 eggs, and its shipments to outside markets amounted to 16,045,642 dozen eggs, or enough, if laid end to end, to encircle the earth. Not only is poultry the pet industry of Petaluma, but it is the principal one, and the little White Leghorn can be seen scratching industriously in small groups in city back yards, or in legions on the large chicken ranches that spread out over the series of little hills in the Sonoma Valley. In fact, the meaning of Petaluma is the "City of Little Hills."

There are usually reasons back of the success of an individual or community, for unlike Topsy, they do not "just grow," but are the result of fundamental advantages or elements that make for that success. An analysis of Petaluma's prosperity discloses a number of reasons why egg production is unusually successful there.

To begin with, the climate is ideal for chickens—not too warm in summer and not too cold in winter. Although the district lies in one of the

productive valleys of California, with an abundance of sunshine most of the year, the air is prevented from becoming too warm by the steady ocean breezes that blow from the cold Pacific but 18 miles distant. This ocean air is tempered by its passage over the Coast Range, with its forests of trees and open pasture lands, and when it reaches the valley there is a freshness and vitality to the air that invigorates alike the human and animal species. Compared with other interior valleys, Sonoma County has a very moderate climate. The average temperature is about 75 to 80 degrees in summer and 60 degrees in winter. There are very few frosty mornings and snow and ice are as unknown as they are in the Bay region.

The topography of the Petaluma district and the soil conditions found there are excellent for poultry raising. The gently rolling hills afford excellent drainage for all chicken ranches in winter, and the soil is of a light absorbent gravelly nature, which is cool in summer and does not become gummy during the winter rains. Furthermore, it contains all the mineral elements required by chickens to keep them healthy.

Another element that has been a large factor in the success of the chicken business of this district is its accessibility to the markets of the San

Francisco Bay region. Petaluma lies but 36 miles north of San Francisco, or less than two hours' ride by train. In addition to adequate railroad transportation, the products of Petaluma can also be handled by water, as the city lies at the head of navigation on the Petaluma River.

While there are a number of very large chicken ranches in Sonoma County, the largest having more than 50,000 chickens, the great majority of the ranches range from 1,000 to 4,000 hens. There are some with 10,000 chickens, or thereabouts, but to take care of this number requires considerable outside help, and it has been found that to get the best results the flocks should be only large enough to receive the personal attention of the owner or his family, as the average hired hand does not take sufficient interest in his work to give best results. Poultry raising is an exacting business, requiring almost constant attention to trivial details, but if any of these are neglected the results immediately show in the flock.

Probably in no other line of work connected with the soil can one find so many outsiders who have made a success of their ventures as is found at Petaluma. There are hundreds of men who are today successful egg producers who went from our cities and towns with no farm experience what-

ever and who yet succeeded in spite of many handicaps, because they had the requisite industry, courage and stick-to-it-iveness. There is, of course, a lot to learn about poultry raising, but often the man who starts with no preconceived ideas of how to raise chickens, based upon farm experience where chickens were merely a side issue, and who is willing to learn from his neighbors and from the writings of men who have studied special problems, will win out over the country man who thought he knew it all because he has kept a few hens on a general farm.

The average chicken ranch in Sonoma County embraces about five acres of land and ranges from 1,000 to 3,000 hens. Such a ranch can be handled by a family without outside help and will easily support and return a nice profit to the owner if he manages at all well. The owner's entire time can be devoted to the production end, for he can market all the eggs and chickens he wants to sell at his own door. All of the big egg distributors and storage men of the Bay region maintain branch offices in Petaluma, and these agents buy the eggs on the ranches and look after their shipment to market. Or, if an owner becomes a member of the Poultry Producers Association he can have his eggs and poultry sold on a cooperative basis. This marketing organization, composed solely of producers, handles

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against
loss through dishonesty of any adver-
tisers in the Cultivator. We do not at-
tempt, however, to adjust trifling differ-
ences between subscribers and honest,
responsible advertisers, nor will we pay
the debts of honest bankrupts. Notice of
complaint must be sent us within 30 days
from date of the transaction, and the
subscriber must have mentioned the
Cultivator when writing the advertiser.

BE REASONABLE

Raisin growers have, some of
them, felt that a slightly higher price
might have been secured for the com-
ing crop. Possibly this is true, but
officials of the Associated have ob-
served that prices prevailing for the
past few months have lessened the
use of raisins by many of the house-
wives of the country. Producers, or
rather those who are marketing for
producers, have learned some time
since that reasonable prices secure
greater consumption and more rapid
movement of any product.

GROW THE BEST

The Associated Raisin Company
has appealed to its members to give
more attention to delivering raisins
which will pack out "hand sorted lay-
ers." The association says:

"In view of the ever increasing de-
mand for good layer raisins all Mus-
cat growers are urged to make and
deliver as many hand sorted layers
as possible during the coming season.
The company will pay a bonus of one
cent per pound, or \$20 per ton, for
all hand sorted layers delivered,
which pack out 75 per cent or better."

One cent per pound should compen-
sate for much extra care of vineyard
in growing and for much extra care

in handling the grapes. Shortage of
labor is a problem these days, of
course, but where the labor can be
secured the additional profit should be
made.

MARKETS DISCONTINUED

After several years of trial all
the free markets in Los Angeles have
been discontinued. At first more than
a dozen were established in different
parts of the city. They were popular

BENEFIT FOR DISABLED VETERANS OF THE WORLD WAR

The organization known as Disabled Veterans of the World War has been formed to establish a relief fund for sick and destitute members and a separate fund for helping any soldier disabled in the World War, whether member or not; to maintain an employment bureau; and "to insure the future of its members in many ways, to keep them out of the Old Soldiers Home, and to restore them as far as may be possible to their old spirit of independence and self sustinment."

To add to this fund, a remarkable autographed war poster will be auctioned on the night of September 16 at the Alexandria Hotel, Los Angeles, for the benefit of the Disabled War Veterans. This poster bears autographs of General Pershing, Admiral Rodman, Attorney General Palmer, Vice-President Marshall, the Prince of Wales, William J. Bryan and other notables. These have all been collected by Mrs. Gertrude Gifford Hand of Los Angeles, who has been prominent in war activities and in work for the benefit of the returned soldiers. The precious collection of autographs is enclosed in a specially designed container, the cover of which is designed by Charles S. Winslow, a member of the Disabled Veterans of the World War, now studying art under the direction of the Federated Board of Vocational Education.

until the farmers found their principal competitors were husksters who purchased in the wholesale market and instead of delivering from house to house located in stalls in the free market, and while in many cases the truck displayed by farmers was fresher and better stock, the husksters were able to sell their stuff at lower prices, and the lower prices were what attracted the buyers.

WHEAT POOL FAILS

Farmers of the Middle West met last week at Columbus, Ohio, and listened to the report of the committee appointed to formulate a plan for a nation wide wheat pool to be controlled by farmers. After consideration of the plan which the committee presented it was decided that the proposed pool might be in violation of the Sherman anti-trust law. Hence the entire scheme has been rejected, and until the committee, now on the Pacific Coast, reports back to the National Farm Bureau Federation we presume there will be no general movement toward marketing or pooling wheat.

STORE UP FOOD

Next spring's fruit buds and leaf buds, at least of our deciduous trees, will depend upon the food which is being stored today. But many orchardists fail to realize this fact of plant growth and the prunes, the peaches, the apricots, and other trees which have yielded of their fruits are permitted to shift for themselves. After a winter of abundant rains they can sometimes do this, but after such a winter as we had last year the farmer who does not provide best of soil conditions and give irrigation as needed is in danger of being confronted by disaster next spring when the new growth and the blossoms both call for more of plant food than the tree can supply. The Cultivator knows perfectly well that next May and June the mails will be more or less burdened with appeals for help for orchards showing little leaf, die-back or sour sap conditions. Unfortunately we cannot turn backward time in its flight; the damage has been done and is past repair.

Orchard property involves too great an investment to be jeopardized by permitting drouth at this period.

NEW SCHEDULE

The Cultivator gives place on its cover this week to a new dosage schedule for fumigators, which has been worked out by Prof. Woglum, formerly with the department, making fumigation investigations in California for many years. He is now connected with an organization of citrus growers, the California Fruit Growers Exchange. It is possible this more direct contact with the citrus grower may result in

fully, especially in the case of the larger trees. The old schedule or chart was printed in the California Cultivator of August 9, 1919, on page 147. Those who have filed that paper may make direct comparison and note a material difference in that the new chart calls for larger dosage with very large trees. The reason for this is given by Prof. Woglum on the page on which the chart appears.

JAMES WILSON

James Wilson, for 15 years secretary of the department of agriculture, died at his Iowa home, August 26. "Tama Jim," as he was affectionately known, occupied a place in the cabinet of the President of the United States—under McKinley, Roosevelt and Taft—longer than any other individual. As head of the department he secured for it and its activities a position and a success which it had never known. He was born on an Iowa farm August 16, 1835. This was near the present site of the town of Traer. He consistently stayed by farming all his life.

MARIOUT

Prof. G. W. Hendry of the division of agronomy, college of agriculture, reports that returns are being received from many new sections, which chronicle the performance of the new barley, Mariout. It invariably outyields common barley, and the difference is especially noted in cases of extreme drouth. Prof. Hendry reports that it is probable the acreage planted this fall will exceed 200,000.

In developing this seed and presenting it to the farmers of California the university has performed a distinct service.

"THE ONLY 15-25 Tractor Capable of Pulling Three Plows on High Gear Around Here"

"I have just finished the threshing season pulling a 24" separator. I had plenty of reserve power at all times. In plowing the LAUSON seems to be the only 15-30 tractor capable of pulling three plows around here. Practically all the other machines use only two plows or plow on low gear. It is the best kerosene burner I

know of, using the lowest grade kerosene which will hardly ignite with a match and burning it without smoke or odor whatever."

This is a strong testimonial for F. B. Burns of Hornick, Iowa, to write. But it is the kind of service LAUSON Tractors are giving all over the country.

Year after year the LAUSON Tractor has gained favor with the better class of business farmers—men who consider service and satisfaction rather than price. You will usually find LAUSON owners the leading and most prosperous farmers in the locality.

Write for our new catalog which illustrates and describes the construction of the Lauson—the "Pattern" Tractor.

The John Lauson Mfg. Company,
New Holstein, Wisconsin.

Gentlemen:—

Have just finished the threshing season pulling a 24" Advance Runley machine with only 15 minutes' stop for tractor, a broken fan belt and a clog in carburetor. Had plenty of reserve power at all times.

In plowing the Lauson seems to be the only 15-25 or 15-30 tractor capable of pulling three plows on high gear around here. Practically all the other machines use only two plows or plow on low gear.

It is also the best kerosene burner I know of, using the lowest grade kerosene that will hardly ignite with a match without any smoke or odor whatever.

Yours truly,
(Signed) F. B. Burns

DUST PROOF—ALL GEARS ENCLOSED

Heat Costs Valley Growers Millions

By Cultivator Staff Writer

W HILE it is said that in California all weather is "unusual," this season may truthfully be termed unusual when considering the effect of the hot weather on fruit crops in the San Joaquin Valley. The hot weather damage was particularly severe on grapes.

The fruit grower who is inclined to be somewhat pessimistic about the weather in general has had just cause to complain, and the only consolation he has had is that he will receive a comparatively high price for the fruit he has left. That is, provided early rains do not ruin his high hopes. There are those who claim they can see signs of a repetition of the disastrous season experienced in 1918, but no one can tell. The best advice at present is to leave as little as possible to chance. This same advice might have been given prior to the advent of the extremely hot wave which occurred the latter part of June, or to be exact, on June 20, when the official government thermometer registered 110 degrees.

This hot wave, coming as it did without previous warning or warming up, actually scorched the grapes hanging on the vines. In many places, particularly where there was a reflection from roadways, they had the appearance of being scorched by fire. Conservative estimates place the loss from heat for the one day at ten per cent of the crop.

The lesson to be learned from this "spell" of weather probably went unnoticed by all except those who were traveling about the country examining the condition in various vineyards. Strange as it may seem, the application of irrigation water apparently had little to do with the extent of the damage. Vineyards which had received no water, those in which the irrigation had just been completed, and those which were being irrigated on that day, all seemed to suffer equally. In every case, however, where the loss was particularly heavy it was noted that the vines lacked thrift. This lack of thrift may have been due to exhausted soil, general lack of care, or a dozen other causes, but the lesson is plain. To be safe in the future everything which tends to promote thrift of the plant will tend to lessen the danger of sun scald. Reduced to plain words, it is a lesson of good farming. Every grower of fruit should look well to cultivation, irrigation and above all to proper fertilization of his orchard or vineyard.

The next unusual weather began with the month of August, when the official thermometer hovered around 102 degrees until between the 12th and 16th of the month, when it took a sudden jump and registered between 106 and 110 degrees, dropping down to the more normal 90's on the 20th. The damage during August is much more difficult to estimate, but the loss to grapes alone will probably run between five and ten million dollars.

One wonders what will happen to the fruit industry of the valley if we have many more of the dry years which we have been experiencing. Surely plants cannot withstand the lack of water much longer. With the water all out of the ditches and a large part of the ranches without pumping plants, it is little wonder that the soil should become so dry that the vines actually burned up. The partially matured fruit will, of course, be of some value, but cannot possibly measure up to standard quality.

The whole outlook for the fruit industry in the valley would appear to be rather dismal but for one outstanding fact. This is that there are dozens of vineyards which have come through the season with scarcely any damage from heat, and the owners will harvest excellent crops of fine quality fruit. Investigation will invariably show that these vineyards have had rational care during the past few years. In almost every case pumping plants are ready to supply water when the ditches go dry. They have usually been fertilized either by an application of commercial fertilizers or green cover crops, or both. The cultivation has been good in all cases.

This season seems to have amply demonstrated the teachings of the experiment stations, agricultural experts and the agricultural press of the state, that California could not long continue to produce crops at the expense of the soil without returning something to it.—F. K. H.

SAN FERNANDO VALLEY FAIR AND MARKET

Next week is the week of the San Fernando Valley Fair and Market, September 15-18. A series of interesting aeroplane battles and other features and stunts is scheduled for each day and evening, but for agriculture there will be large tents and booths so arranged as to give an excellent showing of agriculture as it is conducted in the San Fernando Valley. The management asserts that it has "the two largest tents west of the Rockies," each 130 by 240 feet, these formerly having been used at the National Orange Show. Besides the horticultural and agricultural display will also be shown some of the finest horses, cattle, milk goats, hogs and poultry in the state. Listings to date include over 200 pure bred swine besides an extensive line of every kind of livestock.

Those arriving by auto will pass through a panorama of pleasing scenery and note a variety of crops and fruits and fine residences and barns that will ease their minds as to the prosperity of the section, and the roads are such as to leave a sensation of comfort.

SALES OF SCHOOL LANDS

Public auction sales of 58,000 acres of state school lands will be held in Tehama County at the courthouse in Red Bluff, Tuesday, September 21; Shasta County at the courthouse in Redding, Friday, September 24; Trinity County at the courthouse in Weaverville, Monday, September 27; Siskiyou County at the courthouse in Yreka, Friday, October 1. All sales commence at 10 o'clock a. m. and proceeds go to the school fund. Terms ten per cent cash, six per cent interest on balance.

For list of lands and information, address State Surveyor General, Sacramento.

Heider Tractors

Have Plowed Furrows
That Would Belt the World

12 Years' Actual Field Work

IN the last 12 years thousands of Heider Tractors have gone into the hands of farmers. The Heider is in use in every section—in every kind of ground—on every traction or belt job. Let the thousands of Heider owners tell you how successful the Heider is—how economical—how *certain* it is in the delivery of power for the hardest work. Our booklet, "The Verdict Direct From Heider Owners," gives you *their* experience. Send for it.

15% to 20% Fewer Parts

Here is one big reason for the Heider's unequalled success: Its friction type of transmission saves 15% to 20% of parts. It does away with clutch, transmission gears and bevel gears. The fewer the parts through which the power has to travel, the more power delivered to drawbar or belt. This means more actual work from the fuel—a big saving.

No Gears to Strip

Here's another reason: With the Heider Friction Drive the power is taken directly from the flywheel by large metal disks at either side—one for go ahead, the other for reverse.

It is a steady power flow. No jerking, no vibration. NO GEARS TO STRIP. Tractor is always "in mesh." Seven speeds forward and reverse all with one motor speed and one lever for traction or belt.

Two sizes: 12-20 and 9-16. Send for catalog and "The Verdict." See what Heider users say. You do not have to take a "demonstration" of one or two days as proof. Catalog also describes famous Rock Island CTX Tractor Plow and one-man Tractor Disk.

California Grape Industry

The California department of agriculture is mailing "The California Grape Industry for 1919 with Outlook for the 1920 Crop." This is report No. 1 and is written by Professor R. L. Nougaret. It deals quite fully with wine grapes and their use as fresh table grapes, grape juice, grape syrup, dried grapes and the prospects for marketing the 1920 crop. That portion of the report touching upon salvaging the wine grape crop of 1920 follows:

Salvaging the Wine Grape

In discussing the salvage of the wine grape crop for this coming fall the question arises: How may wine grapes best be disposed of through both foreign and domestic trade? Do markets for these products exist at present to take care of the entire crop? Or must new markets be created or developed? And what portion of this year's crop utilized last year will have to be manufactured into other products?

In order to arrive at some definite idea as to how the 1920 wine grape crop may be disposed of a comparison of the tonnage that may possibly be utilized this year with that used last year for the same products will forecast whether or not the 1920 wine grape crop may be profitably handled.

Last year the wine grape crop amounted to 411,890 tons; 128,150 tons of these were shipped as fresh grapes and 82,700 tons were used in the manufacture of unfermented grape juice, grape syrup and dried wine grapes. Taking for granted that the 1920 wine grape crop will equal that of 1919 and this same tonnage will be used for the like purposes in 1920, there would remain only the tonnage of grapes made into wine in 1919, amounting to 201,020 tons, in whole or part, which would have to find other outlets if the same gallonage of wine is not manufactured next fall.

Last fall 201,020 tons of grapes were used in the manufacture of both dry and sweet wine. This year the tonnage that probably can be used profitably and in a legitimate way for making wine may be as follows:

Wine can be used as wine, without any modification of its component parts for sacramental, medicinal and other nonbeverage purposes. Five million gallons is a very liberal estimate for the quantity of wine that can be disposed of in this way, which corresponds to about 33,500 tons of grapes.

Wine can be made into vinegar and, judging by the preference of those who use wine vinegar, and who willingly pay a higher price for it than for vinegar made from other materials, one may presume that through advertising and other means of publicity and education no little amount of vinegar could be sold profitably when made from grapes purchased at as high a price as that paid for grapes used for wine making. However, at the present time there is but little demand for an article of this kind, and for this year's crop no tonnage at this time can be specified.

There are two or three patents for "de-alcoholizing wine" by which a very fair article can be produced. As yet it is a question whether wine in this form will take the place of the genuine article for beverage purposes to any extent. If, however, we take as a basis the quantity of wine sold for making the de-alcoholized article since the enforcement of prohibition to ascertain how much of this year's crop of wine grapes may possibly be used for the same purpose, 1,000,000 gallons should be a fair estimate, to which will correspond about 6,500 tons of grapes.

There is abundant evidence, at the time of issuance of this report, that preparations are being made to produce for nonbeverage purposes a large gallonage of fortified wine. Stocks of this character of wine are entirely depleted and the demand for it for nonbeverage purposes has been tremendous. Recently trainload shipments have been purchased at \$2 per gallon naked and there is practically none to be had at the present time. In view of this shortage, extensive plans are now in progress for the manufacturing of these fortified wines in large quantities for delivery after the com-

ing vintage season. This angle will, therefore, afford a big outlet for a large tonnage of wine grapes and table grape culls. It would not be surprising if 6,000,000 gallons or more fortified wines were made the coming season, necessitating the use of 80,000 tons of grapes. This, added to the 40,000 tons previously stated, would give an approximate quantity of 120,000 tons that would be used for wine this coming season. Compared to the tonnage used for the same purpose in 1919 (201,000 tons), there would be a surplus of 81,000 tons which would have to be utilized in some other way this coming vintage.

This figure of 81,000 tons expresses the economic problem of the wine grape industry to be solved in 1920 and the question arises: Are the prospective markets capable of utilizing this surplus? If so, are they of such a character as to be permanent, dependable and legitimate?

Last year the demand for dried wine grapes was greater than could be supplied because a market suddenly materialized at a time when most of the grapes were harvested. In anticipation of the 1920 wine grape crop the demand is just as firm. Contracts of purchase are eagerly sought for at prices as remunerative as those of last year, both for the dried product and for fresh grapes to be dried. Many more dehydrating plants than those in operation last year are at this time being erected and plans have been made to install additional plants in time for the coming season. There is no doubt that the quantity of dried wine grapes produced this fall will far exceed that of last year. It is hard to say how much of the surplus 81,000 tons will be used in this way. Half of it (40,500 tons) will produce approximately 10,800 tons of dried grapes which, when added to the 10,000 tons which is the quantity made in 1919, would give for 1920 a grand total of 20,800 tons of dried wine grapes seeking a market.

Should the other half (40,500 tons) be made into grape syrup, approximately 1,500,000 gallons would be the result, and this, added to the 200,000 gallons of grape syrup which is the gallonage produced last year, makes in round numbers 1,700,000 gallons of a product emerging from the experimental stage with the brightest of possibilities but practically without a market.

A PROMISING NEW AVOCADO

The Dorothea avocado is a new variety originating on the grounds of W. A. Miller, Hollywood. It was grown from a seed taken from a fruit of the original Miller tree and planted by Mrs. Jacob Miller in the spring of 1914. The tree is of a vigorous, erect and symmetrical type. In 1918 it bore five fruits and in 1919 forty fruits.

The fruit is pear shaped, weighs about one pound, has a skin of medium thickness, or slightly less, green in color, turning to a russet shade upon becoming fully ripe. The flesh is rich, free from fiber, of good quality and flavor, and the seed, which is of medium size, is tight in its cavity. The time of ripening, which is in winter, and the quality of the fruit, combine to make the Dorothea an attractive new avocado and one worthy of being noted carefully.

SANTA PAULA AVOCADOS

On the N. W. Blanchard ranch there are 600 to 700 avocado trees. They are set in a young citrus grove in every other row each way. This places them 40 by 44 feet apart. At the same age they are four times as large as the citrus trees. There are six standard varieties in the orchard, not all of the best, yet of the better known. On the Limoneira there are many trees and on the Mills and other ranches a few. In nearly every orchard of considerable size a few avocados have been planted for experimental purposes, and this seems to be the program in all citrus sections of the state.

Eldorado County is becoming a great shipper of pears. Many shipments have brought \$6.50 in New York. Nearly 200 carloads have been forwarded.

This Book of Farm Wonders FREE

YOU will sit and read it with rapt attention to the very last page, so interesting to farmers and their wives is the story between its covers.

Its thrilling contents provide but a short half hour's reading. Within that brief space, however, there will be born to you a new idea of home comfort and relief from work, such as you little dreamed of.

As you read you can see the vision of a new home filled with all the comforts and conveniences of a modern city dwelling; a

wife made happier by relief from toil, boys and girls content to remain on the farm.

More than a vision, this actual condition can be yours, as this book explains. You can have this same better home, happier wife and more contented family. These are the things you have earned and deserve. And the book tells you how to get them.

Send for it today while copies can still be had, free. Clip the coupon below and mail at once.

Save Money—Buy Pipe From Us

Farmers, Miners, Builders—people in every kind of business are saving money buying used or renewed pipe from us. We sell every kind of pipe. Send in a list of your requirements today and get our prices. We have saved hundreds of people 33 1-3 to 50% on their pipe bills. Here's a partial list of some of the miles of pipe we have in stock for immediate delivery:

8000 ft.	6-Inch Riveted	16 gauge
700 ft.	8-Inch Riveted	16 gauge
5000 ft.	12-Inch Riveted	12 gauge
1000 ft.	18-Inch Riveted	12 gauge
800 ft.	22-Inch Riveted	14 gauge
300 ft.	24-Inch Riveted	14 gauge
500 ft.	36-Inch Riveted	12 gauge
10,000 feet	light wrought iron 8-Inch pipe with cast iron collars.	

All above pipe thoroughly overhauled and inspected and ready for immediate use.

We also have large quantity standard pipe and screw casing, pressure tested and guaranteed.

Don't delay—write for our prices on your pipe requirements today.

Yorba Linda Avocados

By Ernest Braunton

HERE are but four avocado ranches of note at Yorba Linda, Orange County, and two of these promise to pass out. On the places of Dr. Lester Keller and O. A. Mann drillers are at work in the earth, with the expectation that oil from this source will be of greater value than that in the avocados of the orchards. Neither of the latter were promising from a fruiting standpoint, and in part now face destruction.

J. T. Whedon is the pioneer and premier avocado grower of that section, having for years held contracts with leading Los Angeles hotels for his entire crop, and this has to date proved insufficient to meet the growing demand. Though increasing his orchard capacity, he told the writer that he does not expect to be able to fully supply even his present single customer. Mr. Whedon grows more of Fuerte than any other variety, though he has 40 on the place. He is now leaning toward the Sharpless as a better hotel fruit than the Fuerte, merely because of superior size. He has a number of Taft now bearing their first crop and considers Taft still worthy of extensive planting. Though not precocious, when once it comes

into bearing it is a steady cropper and may yet be replaced in the official

Four Year Old Queen Avocado
In orchard of E. E. Knight, Yorba Linda.

list of recommended varieties. Other varieties in Mr. Whedon's orchard are not yet sufficiently tested to pass upon conclusively.

E. E. Knight had passed many years in Guatemala and surrounding countries before coming to California, and when he learned of the growing popularity of the avocado he went back to that country to get budwood from the best fruit trees he had previously encountered there. When he returned in July, 1914, he brought with him, among others, five he has retained and named—Linda, Kist, Knight, Queen and Rey. Among our best growers the Queen has to date been considered the better and 1921 may see it in the preferred list of the association. Others of his introductions may follow, for some orchardists are planting heavily of them. W. A. Spinks of Duarte has 200 trees each of Linda, Knight and Queen. All members of the avocado association are loud in their praises of Mr. Knight's efforts to give us the best he found in several years residence in the tropical highlands. The five he has introduced came from 4,000 to 6,000 feet altitude. In the Yorba Linda section nearly every orchard has a few avocado trees, some of them a score or more, and when all these come into bearing that district should be noted for its output of tropical and subtropical fruits.

STATE GRANGE

State Master Frank L. Hunt sends announcement that the 48th annual convention of the California State Grange will convene in Odd Fellows Hall, Sacramento, October 19. He writes:

"This year, as usual, the fifth and sixth degrees will be given. The fifth degree will be conferred by the Sacramento County Pomona degree team and the sixth degree will be given by the officers of the State Grange. We expect a large class will take advantage of this opportunity to receive these degrees.

"Secretaries should send reports for the September quarter to the state secretary as soon as possible after the last meeting in September so that she need not be delayed in getting out her State Grange reports. Also see that your delegates are supplied with proper credentials.

"Application has been made for reduced railroad rates. When you ask for your ticket say that you are going to attend State Grange and ask for a return certificate. Whether this reduced rate will be secured or not will depend on the number of tickets sold.

"It is none too early now to begin to prepare for this convention. Remember that we are going to have a very profitable and enjoyable session and that questions of vital importance will be threshed out. Try to see that your grange is well represented in helping to solve these important subjects. Come and catch the inspiration and enthusiasm that these sessions always impart."

PRUNES BEING SHIPPED

The first shipments of 1920 crop prunes to be made this season were sent East Friday of last week by the California Prune and Apricot Growers, Inc., who dispatched two cars, one from the packing house at Campbell and one from the Gilroy plant. This first shipment beats by one day the date of the first prune shipments made last year.

Hot weather of the past week, which has been general in all the producing sections of the state, has ripened the prune crop very fast and the picking and drying season is expected to pass its peak early this week. The packing houses in the Santa Clara Valley are working at top speed, filling orders which specify shipment during September.

Estimates which placed the 1920 California prune crop from 180,000,000 to 200,000,000 pounds still are holding good, and unless bad weather interferes with the fruit drying the next few weeks this year's crop will total close to 200,000,000 pounds in comparison with the 1919 crop of 250,000,000, the largest ever grown in the history of the industry.

Champion

Keep Your Truck Going

USE Champion Spark Plugs to cut truck costs.

They aid greatly in profitable, continuous truck operation, by ending many of the costly delays for repair and adjustment.

Champion No. 3450 Insulator effectively withstands the constant shocks, heat and vibrations to which truck motors are subjected in their long, daily grind of heavy duty work.

Champion dependability accounts for Champion Spark Plugs having been adopted as standard equipment by more automobile, truck, tractor, and engine manufacturers than any other make of spark plug.

There is a Champion Spark Plug for every type of motor car, truck, tractor, motorcycle and stationary engine. Order a set from your dealer today.

Be sure the name Champion is on the Insulator and the World Trade Mark on the Box.

Champion Spark Plug Company

DEPENDABLE SPARK PLUGS

For President
Warren G. Harding

For Vice-President
Calvin Coolidge

The Republican Party and the Farmer

To the Farmers of the Southwest:

Next November you will join with all other good citizens in choosing a president of the United States for the four years beginning March 4, 1921.

You must choose either Warren G. Harding, the Republican nominee, or Gov. Cox, the Democratic nominee. There is no third choice. One or the other of these two men will be elected. The affairs of the nation during the next four years will be directed either by a Republican or by a Democratic administration.

Which will best serve your interests, both as a citizen and as a farmer?

Let us look at it for a moment from the purely farm standpoint.

Your experience of the past seven years, and especially during the past three years, tells you what you may fairly expect from a Democratic administration.

Your industry, the greatest in the nation, was singled out as a target for a price fixing policy which has limited the prices of the things you had to sell while leaving you exposed to the exactions of profiteers in practically every other line of production, distribution and speculation.

You have been told what you could receive for your staple products, either directly or indirectly; you have been subjected to restraints as to shipping, and all sorts of exactions and annoyances.

But there has been no limit placed upon what others might charge you for the things you have had to buy.

The result of this unwise, unsympathetic policy, while discouraging and harmful to the farm producer, has not helped the consumer. On the contrary, it has made conditions worse for him, because it has tended to curtail production and at the same time has stimulated speculation and profiteering.

The Republican party is not a class or sectional party; its policies are intended to upbuild the entire nation. But it believes that it is essential to the welfare of all our people that the farmer, whose industry is the very foundation of our national prosperity, should have his fair share of the wealth which his labor and enterprise creates. It believes that if our agriculture is to be maintained the farmer must have an absolutely square deal.

The Republican party therefore, by its platform and by the utterances of its candidates, is pledged to a thoroughly sympathetic, practical, helpful at-

titude toward American agriculture. It promises a well thought out, constructive program which will help make farming more profitable and therefore make our farms more productive.

In contrast with this helpful attitude of the Republicans the Democratic party offers no protection to the American farmer against the cheap farm products of foreign lands; on the contrary, it re-affirms its tariff-for-revenue-only policy which throws the American market wide open to the dairy products, grains and meats produced on the cheap land and by cheap labor of foreign countries. It promises no relief from the price-fixing and price drive policies which have cost the farmers hundreds of millions of dollars during the past two years and have helped no one but the speculator and the profiteer. Nor does it even recognize the existence of the violent fluctuations in the prices of farm products—more violent and unreasonable during the past three years than ever before in our history—which have caused you such heavy and unnecessary losses.

Pledges of the Republican Party

Here are the formal pledges of the Republican party as set forth in the agricultural plank of the national platform. Read them carefully, for they are of vital interest to you.

Practical and adequate farm representation in the appointment of governmental officials and commissions.

The right to form co-operative associations for marketing their products, and protection against discrimination.

The scientific study of agricultural prices and farm production costs at home and abroad, with a view to reducing the frequency of abnormal fluctuations, and the uncensored publication of such reports.

The authorization of associations for the extension of personal credit.

A national inquiry on the co-ordination of rail, water and motor transportation, with adequate facilities for receiving, handling and marketing food.

The encouragement of our export trade.

An end to unnecessary price fixing and ill-considered efforts arbitrarily to reduce prices of farm products, which invariably result to the disadvantage both of producer and consumer.

The encouragement of the production and importation of fertilizing material and for its extended use.

The extension of the federal farm loan act so as to help farmers to become farm owners and thus reduce the evils of farm tenantry, and also to furnish such long-time credit as farmers need to finance adequately their larger and long-time production operations.

Revision of the tariff as necessary for the preservation of a home market for American labor, agriculture and industries. (Note that the pledge to the farmer is just as specific as to labor and capital.)

Harding's Endorsement

Senator Warren G. Harding, the Republican nominee, in his speech of acceptance took advanced ground on behalf of agriculture. He said:

"I hold that farmers should not only be permitted but encouraged to join in co-operative associations to reap the just measure of reward merited by their arduous toil.

"Our platform is an earnest pledge of renewed concern for agriculture, and we pledge effective expression in law and practice. We will hail that co-operation which will make profitable and desirable the ownership and operation of small farms and which will facilitate the marketing of farm products without the lamentable waste which exists under present conditions.

"A Republican administration will be committed to a renewed regard for agriculture and seek the participation of farmers in curing the ills justly complained of and aim to place the American farmer where it ought to be—highly ranked in American activities and fully sharing the highest good fortune of American life.

"Becoming associated with this subject are the policies of irrigation and reclamation so essential to agricultural expansion, and the continued development of the great and wonderful west."

Mr. Harding pledges federal co-operation with state governments in building and improving farms-to-market roads rather than national highways, to cheapen and facilitate the quick shipment of crops.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

School Attendance

Is there any certain distance which you are obliged to send your children to school? If you live over five miles from the school and have to move in order to send your children to school, must you move towards the school in your district? If you move outside of your school district do you have to pay?—Subscriber, Academy.

The compulsory education law requires that all parents of children between the ages of eight and fifteen years must send such child to a public school during the school session, with certain exceptions, among which are that in case there is no public school located within two miles by the nearest traveled road of the residence of the child, it shall be the duty of the board of education upon application of the parent to excuse the child from attendance. In case of a move from one district to another, the child will become entitled to attend the public school within the district to which the parents move. In fact, the board of trustees of any school district may permit children to attend schools of their district upon consent of the trustees of the district in which such children reside, or in case they fail to consent then upon the order of the county superintendent. All school trustees are also entitled to provide for the transportation of pupils within their school district wherever such transportation is deemed advisable within their judgment at a cost not to exceed 15 cents per pupil per day.

Interest in Pumping Plant

I purchased a ranch to which is appurtenant a one-quarter interest in an electric pumping plant located upon adjoining land, together with ownership of a pipe line upon the plant to my place. We have always had a working agreement whereby I took four days run on the plant and my neighbor took 12 days run throughout the season. I have always paid one-fourth of the total power and repair bills, which were sent to me each month. This spring I installed my own plant and notified my neighbor of my intention to allow my one-quarter of the time to stand idle. The first of the month he sent to me a power bill of \$20 and also a charge for oil for the pump. Can he make me pay these bills if I do not use the plant? Have I the right to require him to allow my one-quarter time to stand idle? Can I require him to give to me every fourth day use of the plant instead of in accordance with our prior arrangement, and has he a right to keep me away from the plant?—Subscriber, Exeter.

You and your neighbor were unquestionably tenants in common in respect to the pumping plant and you possessed over his land an easement for the purpose of procuring and delivering water to your land. You certainly have the right to traverse that easement for the purpose of keeping your pipe line in proper condition and for the purpose of procuring the operation of the pumping plant necessary to procure the water. The agreement as to payment of charges seems to be very definite; that is to say, that you will pay one-fourth of the total charges. If you do not desire to take the benefit of the pumping plant, it would seem that is an entirely personal matter with you. You were not paying for water or purchasing water, but your neighbor is entitled to proceed under the definite agreement which you have and to charge you with one-fourth of the expense of operation and repairs incident to the plant. Of course, if he would sell any of your water, you would be entitled to one-fourth of the receipts therefor. It does not seem that you could require him to change from the definite agreement which you have had as to the manner of use of the water and require him to give you water every fourth day nor require him to pay your one-quarter of the expense. He

is entitled to charge you with your portion, and if you fail to pay the same, to bring action in the courts to collect that amount or, he may hold it as a lien upon the interest which you have in the plant and foreclose that lien.

GREAT TRACTOR SHOW THIS MONTH

It has been demonstrated during the past few years that modern farming demands equipment taxing the ability of inventive genius. Every year brings forth its particular problems of agriculture, and within a short time there appears a new and better mechanism exactly suited to the work in hand.

Nowhere in the world is there a greater field for these appliances than in the great Pacific Coast farming districts, and it was with the determination to hold an exhibition truly national in scope—one that would give the farmers of this district an opportunity to see and to compare all standard makes, that the Tractor & Implement Dealers Association of Southern California perfected their plans for the big show to be held at Verdugo Woodlands, Glendale, September 20-26.

Obviously it is impossible for even the most wide awake farmer to keep track of all the improvements which appear with such rapidity, notwithstanding the fact that huge sums are spent in advertising. It is because of this rapidly increasing number of excellent mechanisms that the annual exhibitions of motor driven mechanisms are so valuable. They give the prospective purchaser an opportunity to examine and compare, under the most favorable conditions, the various standard makes of tractors, motor trucks, implements and power machinery.

The National Tractor and Implement Show of the West will be complete in every detail. It is planned, first of all, to make it a business, show, conducted on business lines for business men. This does not mean that entertainment features will be discarded, for there will be plenty of diversion for the visitors. But it does mean that the fullest opportunity will be given the visitors to view, undisturbed, the things that are of interest to them and which primarily influenced them to make the trip to Los Angeles.

The exhibit will open every morning at 9:30 a. m. and close at 6 p. m. The association, in anticipation of a large attendance, is prepared to give advance information on hotel accommodations and other matters of importance. This information may be obtained from the Secretary of the Tractor & Implement Dealers Association.

Drawing for position at the exhibition grounds has already been held and indications are that every foot of the 300,000 feet of exhibition space will be appropriated.

MORE SUGAR FOR NEXT FALL

People who have soft pedaled the sugar bowl for six years may be interested in the statement that crop conditions on July 1 promised an increase in next fall's sugar production in the United States; an increase amounting to, approximately, 333,000 tons, or enough to load a train of freight cars 70 or 75 miles long, allowing 40 tons per car. This prospective crop is equal to more than 22 pounds of sugar for every man, woman and child within the United States, and the increase over last year equals more than six pounds per person. The sugar beet crop this year covers almost a million acres as against the five year average of about two-thirds of a million; and the growing condition on July 1 was above the ten year average. There is more than half a million acres of sugar cane this year, about half of which is intended for sugar and the other half for syrup, after deducting considerable amounts for planting the next crop. There is a substantial increase in acreage over last year, especially in Louisiana, where nearly all the cane sugar of the United States is made. The growing condition of the cane in Louisiana is much better than last year but considerably under the average for the past nine years. The department of agriculture, which has carried on a number of projects looking toward making this country self sustaining from a sugar standpoint, is cooperating with other agencies in protecting the crops

from insects and disease and otherwise promoting the production and utilization of a bumper sugar crop. It should be borne in mind, however, that the forecast for 1920 is based upon conditions on July 1, and the actual outturn would be above or below this forecast, according as conditions between July 1 and harvest are better or worse than average.

TUOLUMNE IRRIGATION

The Tuolumne County farm bureau wants producers of fruits and crops to use more of Tuolumne produced water within its own boundaries. The farm bureau meeting recently determined that so long as four irrigation districts are at present securing water rights in Tuolumne County, viz., Modesto, Turlock, Oakdale and South San Joaquin, it is apparent that it is up to Tuolumne County to guard her water supply and demand her legal rights and use the irrigation water.

District Attorney Rowan Hardin gave a very concise legal view of the proposition which was of great value to the farmers, and gave some very valuable advice on the method of demanding our water rights legally.

Mr. Hardin suggested the formation of the Tuolumne County Water Users Association to aid the county in its hearing before the railroad commission, which is to occur in the near future. It was moved and unanimously carried to form the Water Users Association, and all present, 31 in all, became charter members. J. P. Dargitz was elected president and C. H. Segerstrom secretary-treasurer of the new organization. An executive committee was appointed, composed of J. P. Dargitz, C. H. Segerstrom, Earl Barron, Frank Ralph, Rowan Hardin, I. S. May and Leslie Booker. This committee will handle such questions as come up between regular meetings of the association.

HANDLING THE LABOR QUESTION

J. R. Locke, secretary of the Dinuba chamber of commerce, is doing some effective work in planning and organizing farmers on one hand and laborers on the other to secure greatest saving in orchards and fruit handling plants. In a statement recently sent out we note that:

"There is no overestimating the crop of fruit this year. Plums and apricots have come and gone and the peach season is upon us. Watermelons are now going out at the rate of 20 or more cars a day. In all 350 cars will be shipped locally, and this is not a watermelon country any more or a peach country either. Nearly everything has been put in grapes.

"Many new vineyards are coming in bearing this year and the crop will not be much less than twice what it was last year. That there will be work here for all goes without saying.

"The placing of workers in the fruit districts is now attended to by the Valley Fruit Growers Association, which last year maintained offices here. Their main office is at Fresno and the letters of the workers who desire to come in here are being referred to them.

"Just now there is plenty of help locally, though it is said that all that is coming in is being absorbed rapidly. The bringing in of raw help is not as popular as formerly with many growers. Two years ago during a scarcity of help, Y. M. C. A. camps and other camps composed of inexperienced workers from cities were established and found to be not altogether a success. These workers had to 'hand fed,' as it were. When they came in they would do nothing for themselves. They had to be taken here and there, found places to eat and sleep, and the philanthropic citizens who tried to handle them for the general benefit of the community faced only hard work and a deficit for their pains.

"Help that will come in and show a little initiative can make big money here during the fruit season. Wages in the field and packing houses will be high. Arrangements will be made to look after the help locally by the individuals employing them."

RAISIN IMPORTS UNPRECEDENTED

Nearly eight million pounds of raisins were exported from Malaga, Spain, to the United States during the first six months of 1920, a quantity that exceeds the total raisin exports from that port for the seven year period 1913 to 1919, inclusive, according to the U. S. bureau of markets. Practically the entire 1919 Malaga raisin stocks have been exhausted and there are no stocks on hand. The new crop will appear on the market between August 20 and 25. The

American consul reports that there is prospect of increased production. The raisin growers are looking for a continuation of the great demand for raisins in the United States.

FOR ANTS

John E. Wilbur of Pasadena recommends as a repellent and a material aid in the control of ant pest one peck air slaked lime, one-half pint crude carbolic acid. Stir thoroughly and where the Argentine is infesting trees scatter this mixture in circle around the tree. Also effective just outside

of the house, though odor is not the pleasantest.

A SUBSTITUTE

"Henry," said Mrs. Dubwaite, "the Blithersbys next door want to borrow the baby a while."

"I have no objections, but be sure they return our baby and not somebody else's."

"Why, what do you mean?"

"The last time you loaned those people a pound of butter they sent back oleomargarine." — Birmingham Age-Herald.

Unhooking the horses by the light of a Western Electric Lamp

There was once a man called "farmhand"

"If farmhands grow much scarcer, we will soon forget what the word means. Help is certainly hard to get. But I have found help in another form—an electric power and light outfit. I want to tell you what these plants can do for you, and some of the things they can't do."

H. Bowman

Editor's Note: Mr. Bowman's farm is located near Ames, Oklahoma.

NOT being able to get any steady help, I have been doing most of my work myself.

It worried me to think that every hour I spent milking cows, turning a grindstone or chopping wood was just so much time taken away from necessary work in the fields.

"Last spring I became interested in the question of a farm plant. But I delayed buying one, because those I first saw were not much more than lighting plants. They didn't show up well in a power test for heavy work.

"Now my idea of a piece of farm machinery is that it must be useful first of all.

An outfit that does a man's work

"I kept on looking till I found the plant that came nearest to satisfying my need for power — A Western Electric Power and Light Outfit. I'm not saying that this outfit can mow the hay or do any plowing. But it certainly is do-

ing some real, honest-to-goodness work for me, saving time and labor.

"In the first place the Western Electric Outfit has an engine that can operate pretty near all the machinery on the average farm. It runs my fanning-mill, feed-mixer and milking machine.

"Then with the generator and batteries in action—or the batteries alone—I let electricity milk the cows. The utility motor, which I can carry around and connect to any lamp socket, is mighty handy for such jobs as running the churn or the grindstone, or in fact, turning any machine I used to turn by hand.

"All this means time saved—and time is money when a man is in the middle of his planting or harvesting."

Long life to your battery

You may be interested to know that the engine to which

Carry the motor right to the job you want done

Mr. Bowman refers is of the dependable valve-in-head, air-cooled type, burning gasoline or kerosene.

The battery lasts long because of the famous "tapering charge", a Western Electric feature. An automatic control very gradually decreases the rate of flow as the battery fills, till the current stops gently by itself. This takes all strain off the battery.

A postcard for booklet CC5 will bring you more facts about the powerful Western Electric Outfit. Write to the distributor nearest you.

At Last-A Real Orchard Tractor Plow

THE hitch is reversible—the levers have side adjustment—two important reasons why the John Deere No. 8 is especially satisfactory for orchard plowing. It is an easily-handled, low-down, power-lift plow for small tractors, that you can use for general field work as well as for orchard plowing.

JOHN DEERE NO. 8 ORCHARD TRACTOR PLOW

can be set out to either side for close work in throwing to or from the row. Note this advantage of the reversible hitch as shown herewith.

Levers Have Side Adjustment—With the plow set out to either side the levers can be angled in—they are always within easy reach from the tractor seat, out of the way of branches and free of the tractor wheels, when turning short.

Doesn't Scar Trees—Note also the special wheel base design that permits close work without scarring the trees. The front furrow wheel does not project beyond the inner mold-board wing and the land wheel is set inside the line of the third beam.

A Strong, Durable Plow—with simple, positive power lift, a great range of adjustment for deep or shallow plowing. Ample clearance and bottoms scour and pulverize to best advantage.

Made in One Size—three 10-inch bottoms—easy pull for small tractors. Ask your John Deere dealer to show you the No. 8 and don't forget he can show John Deere plows, in moldboard and disc types, for every size of tractor. A complete stock of plows and repairs is kept by John Deere Plow Company of San Francisco for quick distribution.

Write today for a folder describing the No. 8. Address John Deere, Moline, Illinois. Ask for booklet O-57.

Note in the illustration above the special hitch and lever construction that permits setting the plow out to either side and angling the lever in so that they are easy to reach from the tractor seat, out of the way of limbs and free of the tractor wheels when turning short.

Sorghum Poisoning

Is it safe to turn cattle on Texas Ribbon cane which got rather dry a couple of times this summer but when irrigated came back and renewed its growth? I would like to know whether there is danger of Prussic acid poison and how one may determine this without chemical analysis?—Subscriber, Helendale.

This Texas Seeded Ribbon cane is one of the newer introductions of the sweet sorghums and but little seems to be known of it. However many members of this family store Prussic acid under certain drouth conditions. The danger of poisoning is about the same as from other kinds of sorghum. When pastured or fed green there is sometimes danger. Under certain conditions when the plants are stunted in their growth, Prussic acid (hydrocyanic) acid, which is fatal to stock, develops in the leaves. When the plants grow normally, however, there is practically no danger. The losses from sorghum poisoning as compared with losses from other preventable causes are very very small. When the plants are cured the poison disappears from the leaves so there is no danger from feeding the cured silage. Most of the cases of poisoning have resulted, as stated above, from the stunted growth or from the second growth after the first has been cut and taken off, due to the fact that this second growth does not develop rapidly enough to throw off the danger of poisoning which comes from the fully developed root system.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Water Grass In Alfalfa

Have 40 acres that has been in alfalfa nearly 18 years. It was plowed two years ago and different crops put in. Last year I sowed alfalfa again but the water grass took possession. I mowed it three times and now it seems as if the grass has stopped growing and the alfalfa is doing better. Have a fairly good stand. Do you think I will be bothered with the water grass again next year? Can you tell me what to do in case I am?—Subscriber, Escalon.

This water grass—alfalfa combination is one that is exceedingly hard to handle. The best treatment is to put in sugar beets, beans or other crop which makes possible clean cultivation. It will be safest to give two years culture to these other crops. This should destroy nearly all the water grass seed now in the soil. If the field is badly infested it may as well be turned under as hand weeding in alfalfa costs beyond reason.

Self Cleaning Rabbit Hutch

Will some of your subscribers tell me how self cleaning rabbit hutches are made?—Subscriber, Ferndale.

The only self cleaning hutches we have seen have been those with either wire mesh or slat bottoms. The slat bottoms are to be preferred. Slat bottoms are laid at least three-eighths inch apart. We will ask our rabbit growers to give of their experience.

Automobile School

Will you please tell me if there is an automobile school in Los Angeles?—Subscriber, Cucamonga.

Yes the Y. M. C. A. of Los Angeles conducts a most excellent school along automotive power lines.

Thompson Seedless Grapes

What is the best time to plant Thompson Seedless grapes? What is the best crop to plant between the rows and how many years can one raise a crop in this way without injuring the grape vines? How soon will vines bear and what will it cost to harvest the grapes?—Subscriber, Manteca.

These questions are of interest to many so instead of trying to condense so much into a short answer we have asked expert in vineyard work to give us a more general and complete answer in a later Cultivator.

Red Spider on Beans

Soon after blossoming my beans dried up notwithstanding constant irrigating. Is there anything to be done to the soil to prevent this before sowing peas or beans again?—Subscriber, Jackson.

This is not a matter affected by the soil but is a case of most severe attack of red spider. When the leaves show the trouble as seriously as those which you have sent it is too late for any material benefit from any treatment of this year's crop. As soon as the first appearance of the attack by the spider came the beans should have been thoroughly sulphured with high grade flowers of sulphur. If this had been followed by a few hot days and you had repeated the treatment in two or three weeks it is probable you would have entirely corrected the trouble. It is well as soon as beans begin to show some size to give plants and ground around them light sulphuring. This may be repeated occasionally with benefit.

Yield of Acorns

Is there any data available in regard to the yield of oak trees in acorns for feed for hogs? I suppose there is a great difference not only between varieties but also in the same variety, but am anxious to get a little exact information.—Subscriber, Altadena.

Have any of our livestock people any information in this matter of production of oak trees?

Rattlesnake Oil Again

In a recent issue I see where someone asks how to get rattlesnake oil. First see he does not bite himself. Kill and skin, save the hide, then hang the snake up in the hot sun with a dripping can or jar to catch the drip, or take fat rolls out of him and try them out. The first is the easiest and best way, the way I always use on camp trips.—Levi S. Coombs, Napa.

Tuber Moth

How can I protect my potatoes from the moth which lays the eggs which later develop into worms? Will fumigation or dipping in formaldehyde be effective? The potatoes will be ready to dig in a short time.—Subscriber, Santa Barbara.

About the only protection of potatoes from the tuber moth is to keep dirt well worked up about the hill so that there are no exposed potatoes as they finish their growth. Also that there is some depth of dirt immediately around the stem. Then in digging expose the potatoes in the sun only long enough to dry off thoroughly for if they are allowed to remain until evening time they would probably be infested with large number of the worms, or eggs which soon become "worms." They should then be sacked, gathered and stored as soon as possible.

Bean Weevils

What can I do with beans when dry enough to put away so that they will not be destroyed by being bored full

of holes? Last year I put them in tight tin cans but the eggs must have been in the beans or invisible on the outside.—Subscriber, San Fernando.

The trouble is with your last year's beans that the eggs or living weevils were already in possession. Before storing this year place beans in bin or even in jar which may be made practically air tight and set on top of the beans a shallow vessel or container in which is placed carbon bisulphide. This vaporizes very quickly and kills everything in the container. Use at the rate of one-half pound per 100 cubic feet. Best results are obtained if the temperature is kept around 75 degrees. Leave the beans exposed in this gas for an hour or over night. If the beans are to be used for seed shorter exposure is advisable.

Grafting Walnuts

When is the best time to graft English walnuts; I have been told a more vigorous tree can be grown when

black walnut is grown to good sized tree and sawed back and grafted? How deep should soil be for walnuts without blasting? Is medium sandy soil best for walnuts?—Subscriber, Denair.

The best time for grafting is in late January or the month of February. See illustration of methods in California Cultivator of February 14, page 239; also short article by Mr. Neff in issue of January 31, page 167, both in the year 1920. We do not think there would be any material advantage in growing large trees before grafting. However, it has been done and in some cases very vigorous, heavy bearing trees secured. Such an orchard is not uniform, and we would much prefer planting budded or grafted trees from the nursery. We do not understand the question as to blasting. However, in deep sandy loam soil, which is best for walnuts, we hardly think there would be any gain in blasting. If the soil has more or less hardpan underlaid with a loam, even at four or five feet, we would prefer

to have blasting done in the fall when soil is perfectly dry.

Earwig

Will you kindly tell me what this bug is and how to get rid of it?—Subscriber, Anaheim.

This appears to be one of the earwigs. Specimen was referred to Horticultural Commissioner H. J. Ryan of Los Angeles County, and he says that it would be interesting to know what these pests are feeding upon. He adds:

"I am not familiar enough with these insects to identify the species, but will be interested to have an identification made if they are infesting cultivated crops, as they are not generally known to be a pest of economic importance. The European earwig was reported from Newport, Rhode Island, in 1911, and has become a rather serious pest in that district. The adults feed upon the petals and stamens of flowers, while the larvae feed upon the tender green shoots of various plants. The insects sometimes cause concern through their habit of hiding

about the porches or crevices in the side walls of houses. As control measures, successful experiments have been made with poison bait of 16 pounds of stale white bread to one pound of Paris green. The bread is ground up fine and mixed with the Paris green while dry. Enough water is added to make a mixture which will run through the fingers and spread readily when thrown broadcast. I see no reason why ordinary poison bran as used for grasshoppers and cutworms should not be effective. Numbers of the insects could no doubt be trapped and killed if hiding places were provided in flower pots or boxes filled with excelsior or shavings. I would be glad if your correspondent would send in half a dozen or more specimens with full account of plants damaged and nature of injury, extent of infestation and time when it was first noticed."

Best Fertilizer

Will you please advise me which would be the best commercial fertilizer for a Muscat vineyard? Vineyard about eight years old, soil decomposed granite, no irrigation. I should appreciate such information from one of our practical vineyardists in the state.—Subscriber, Escondido.

We hope some of our practical vineyardists will come back with an answer to this question, which will be practical and helpful, not only to this subscriber but to many others. We will say, however, that it appeals to us that it is a question for personal study with special attention given to conditions under which the vines are now growing. If continual clean culture for a period of years has exhausted the soil of its vegetable material, or humus, then an application of stable manure, of straw or, perhaps better, the growing and turning under of a green manure crop so as to improve physical condition would accomplish better results than the application of any commercial fertilizer. Vineyardists must learn that soil fertility is not a matter of prescription, though it is; as many a doctor will say, a matter of building up and allowing nature to have large part in this building up. At one time we thought that analysis of a crop would show the number of pounds and ounces of sulphur, phosphorus, or potassium taken from the soil by the crop, hence the number of pounds and ounces of chemical fertility which should be returned to the soil. Today we think more of physical condition which permits soil activity. But our subscriber asks for help from practical vineyardists. We hope they will send the help.

Sour Sap

I have a great many young apple trees affected with dry rot, sometimes called sour sap. If left alone will they return to healthy growth or should they be replaced?—Subscriber, Olympia.

The taking out of these trees and replanting others or leaving them in and nursing back to health is a problem which can only be solved on the ground after personal investigation, but our guess is that if there is a showing of dry rot the sooner the trees are removed and the ground refitted for planting next January with fresh healthy trees the better. We imagine the cause of your trouble is lack of irrigation about 12 months ago. Many orchardists failed to appreciate the need of an orchard tree approaching dormant season. The busiest time of the year, unless perhaps at fruiting, is when the tree is storing up starch and increasing vitality of its fruit buds for next year. Too often the orchardist looks at the falling leaf and indications of approaching dormancy as notice that his care of the tree is over until the next growing period, whereas, these dropping leaves only indicate neglect at the wrong moment, the allowing of the tree to become prematurely dormant and the denial of moisture which was necessary to plump up and fill out the buds and to store the starch. Next year's sour sap, die-back and a number of other troubles may be largely prevented by thoughtfulness or, better, by irrigation during July, August and September. The chief function of the tree is to bear fruit, but it cannot fulfill that function unless it has been permitted to store the required materials.

Why the Wallis Means Bigger, Better Crops

The features that have made Wallis—AMERICA'S FOREMOST TRACTOR—stand clear and convincing. It requires no great study to see why Wallis power means more acres per hour—whatever the field operation.

Examine that exclusive Wallis feature, the U-shaped frame, which combines great strength and rigidity with light weight. Watch the heavy duty valve-in-head motor as it performs hour after hour, at maximum load, without heating up or steaming. Inspect the vanadium steel gears, enclosed and running in a bath of oil.

Every feature of the Wallis spells great strength coupled with light weight. The Wallis has more drawbar horsepower per pound of weight than any other tractor on the market. That explains Wallis's record in demonstrations throughout the country.

Wallis power means more acres per hour—thousands of Wallis farmers have proved that. And more acres per hour means more dollars per acre.

Write us for information on how the Wallis is performing in your section. What Wallis is doing for your neighbors is the surest proof of what it will do for you.

With Pure Bred Hogs -- Start Right

By J. P. Bennett

THERE is no doubt that attendance at the state fair and other good stock shows of the state will prove an incentive to many to own and produce the class of animals winning the ribbons in the show ring. The big stock shows invariably instill the desire to get into the business, to feel the thrill of satisfaction from owning stock which is better than one's neighbors or fellow breeders. That ambition has been the big factor back of the improvement of the livestock industry.

It is safe to say that there are more new herds of pure bred hogs started each year than all other breeds combined, hence it is to the new hog man that this article is especially directed. The pure bred hog, by reason of its relatively low cost, remarkable fecundity, early profits and the fact that it can be produced on an economic basis, attracts many new men to the business. Some of these new herds will be founded by men who were formerly in the business and who today cannot resist the fascination and pleasure of handling pure bred livestock. However, the majority of herds will be started by beginners with little if any previous experience with pure bred hogs. To the man who plans founding a herd of pure bred hogs there are some fundamental considerations which necessarily must be firmly fixed in mind. First, one must have a natural love for good stock, an ambition to excel his fellow breeders. If it is drudgery to care for and develop good stock, then one will never make a success and might as well call all bets off before starting, for he will only be forestalling a sure failure. Look upon the breeding of pure bred hogs as a business, a profession, if you will, for it takes thought, study, time and effort to develop a herd of breeding animals such as you should aspire to own, and surely any line of endeavor in which one tries to improve upon the work of nature deserves to be called a real business.

The selection of the breed of hogs to handle requires some thought. I will not attempt to advise as to any one "best" breed, for the choice will depend largely upon individual fancy, location and the local demand. I might add, however, that the sooner all breeders realize that we all are working toward the same end, the sooner will we mark a new epoch in the livestock industry.

The selection of foundation stock is where the real work begins, for on the selection of breeding animals depends success or failure. Foundation animals may be acquired by purchasing open sows and gilts this fall, and an outstanding boar, or by purchasing bred sows and gilts during the winter sales and later buying the herd boar. Which, must be decided by your own preference, or, better, by the opportunity to acquire the type of animals wanted as foundation stock. Select females of the long, tall, smooth, deep bodied type, with quality and showing feminine character. This holds true for all breeds. The sow must have length and depth to insure constitution and ability to produce large, strong litters of pigs and care for them as she should.

In selection of your herd boar too much care cannot be exercised. It is commonly said that he is half the herd; however, if he proves to be inferior he is the "largest half." If a pig is chosen for the purpose of "growing out," especial attention should be paid to the pedigree. See that it traces to strong, potent sires on both sides. He should come from a strain of breeding that has produced the type of animals sought. Select a pig that has length, height, even lines, good head and ear. Pay especial attention to feet and legs, as they are the foundation of the hog. Select a pig rather thin through the shoulders so that when he acquires his masculine development, which will come with age, he will have smooth, even side lines and not be rough and bulging through the shoulders. There are certain characteristics that the boar must possess when young, such as type, style, smoothness, arched back,

straight legs, short pasterns, shapely head and ear and a clear, open eye. Feeding may correct other defects, but the above cannot be changed. In your selection remember that a hog is simply a high powered machine used for converting the forage and grain products of the farm into edibles, such as ham, bacon, lard and sausage. Hence, get good ones of high class to start with, because the trade is always willing to pay a premium for something better than the other fellow's. Purchase proven blood lines. However, on this point it is well to be cautious, as there is often a difference between the fashionable blood lines, possibly made popular through an extensive advertising campaign, and the blood lines made popular by inherent traits and prepotent ancestry. Seek advice from a few dependable breeders and you will get off on the right foot, for as a body the livestock men of the country are an extremely high class and square bunch of fellows, and honesty and squareness are the corner stones of the industry.

Many men contemplating entry into the ranks of breeders feel that possibly through lack of financial support or other reasons they must forego their first purchase until such a time as they can put in an entire herd. This is a mistaken attitude, as a bred sow or gilt can be purchased for a moderate sum and in a few months will be paying a good dividend on the investment. After she has farrowed the best gilts can be retained for breeding purposes and in a remarkably short time one will have a choice collection of females on hand. Many of the best breeders have started in the business on just such a modest scale. This plan has another advantage often overlooked by the ambitious beginner, in that it allows him to grow up with his business, gaining practical experience while developing his herd. One is bound to make mistakes and these, occurring with a small investment, will neither be so discouraging nor so disastrous to his future operations. Then, too, he can more accurately gauge his ability and the size of the herd that can be handled most advantageously. There are few, if any, farms that will not show an added profit through the handling of at least a few pure bred hogs.

Get a definite idea of what you are trying to produce firmly fixed in mind and work toward that end. It has been breeding for a definite purpose that has established the present high standard of the pure bred business. It requires some degree of imagination, the ability to visualize a specific type or ideal and the tenacity to hold fast to a worthy purpose, to be a real constructive breeder—qualities which many possess but few capitalize. Remember that the pure bred industry is a big business and by virtue of its wide scope of possibilities has room for ups and downs. But like any other game worth the playing it is the fellow who sticks that wins in the end. Do not be discouraged if you have to wait a little while for success—just remember that if you "deliver the goods" and keep dominant the spirit of success, business is bound to come your way. Do not expect to make your fortune the first year; a reputation is not made and sustained in a day. Herds are not grown and stabilized in even a few months, but you have a possession of priceless value when you have attained rank as a breeder of pure bred livestock.

As your herd develops, give it publicity through the agricultural press. Let the buying public have an opportunity to know that you are on the map. Advertise consistently, keep the livestock department of the paper informed at frequent intervals regarding the progress of your herd. By so doing you can secure greater benefit from your advertising.

In conclusion, let me say, get good foundation material; get them big, of proven ancestry and the stretchy type that the constructive breeders of all breeds are striving to produce. Feed and care for them conscientiously, mix common sense with your work, be systematic and faithful and the herd will repay you accordingly.

VALUE OF PURE BRED BOAR

A pure bred boar at the head of a herd of sows will add a value to a crop of pigs that cannot possibly be added by the very best of feeding and management on the part of the owner of the herd, or a value that could not be expected by the use of a boar of inferior breeding, writes Professor George S. Templeton, head of the animal husbandry department, Texas agricultural college, in a recent issue of Progressive Farmer. There is an old saying that has proved itself to be a real law in animal breeding to the effect that "like begets like." Later studies in the principles of animal breeding explain very nicely that the outward characteristics of an animal are simply a development of the inherited possibilities of the animal, and express outwardly the characteristics that this animal will pass on to his offspring, provided he is properly bred.

The proper feeding and management of the little pig will give it a chance to develop so far as its inheritance from its parents will permit. If anything is withheld in the way of feed, exercise, etc., the pig will not develop to its maximum possibilities. However, if all little pigs were given the same condition for development there would be a great difference in the quality, size, constitution and many other characteristics in the mature hogs that are so important for high priced market hogs, because their parents were of such various kinds of breeding.

Let us consider three kinds of boars in use in many herds of hogs, and study the results of their use on the pig crop.

First, the scrub boar, which is fast disappearing, because he cannot compete with the good pure bred individ-

ual when prices of feed and labor are high and pork consumers demand a pork chop, pork roast, bacon and ham of first quality.

The scrub boar is a result of indiscriminate breeding or of natural selection under adverse conditions. There has been no effort on the part of careful, thinking men to improve his quality so that he will kill out a high per cent carcass of first quality meat. His indiscriminate inheritance has given him such a variety of poor qualities that we do not wonder at his pigs being narrow between the eyes, having narrow backs, tapering hams and meat of poor quality. The offspring of such a boar could not be otherwise for good things cannot come from bad combinations in hog breeding.

Second, we will consider the class of boars referred to as crossbred or grade boars. Crossbred boars are a result of mating boars of one breed with sows of another breed. Grade boars are those that have a large percentage of blood of one breed, but still carry a small per cent of inferior blood. What may we expect from boars of this class?

Quite often a beginner is tempted to buy a boar of this class and use him as a herd boar simply because he looks nice and can be bought cheap. The beginner is unfailingly disappointed when he compares a crop of pigs sired by a boar of this kind with a crop owned by another breeder who uses only pure bred boars. Crossbreeding and grading undoubtedly produce a large number of pigs of a desirable feeding type, but at the same time this practice of breeding mixes up the inheritance of the prospective boar to such an extent that the offspring will have an opportunity to develop too many variations that have come into his own bloodlines. This fact is borne out in breeding, for the offspring of crossbred and grade boars are inferior to their sires and lack the uniformity and good quality found in pigs sired by pure bred boars. When crossbred and grade boars are used their stock "runs out."

Third, we will consider pure bred boars. Pure bred boars, if properly bred, sire good pigs, for they can only transmit such qualities to their offspring as have been handed down to them by their ancestors. The pure breeds of hogs today represent what the constructive hog breeders have accomplished through many, many generations of selection and matings, starting years and years ago with inferior scrub native hogs. These breeders have had in mind a type of hog that would utilize feed economically and put on a maximum of meat on the parts of the body most valuable for human food. By keeping in mind this ideal type and selecting for breeding animals only those individuals nearest to their ideals, and keeping up this system of breeding for generation after generation, these breeders have been successful in fixing the desired type in their herds. In other words, the inferior qualities of the early type hogs have been culled out until the inferior qualities in the immediate ancestors of the pure bred hog have been largely eliminated. Consequently his characteristics are the results of mating animals of similar characteristics, and we say the pure bred boar is prepotent. He transmits his good qualities uniformly to his pigs because he can transmit only those qualities inherited from good parentage.

Below I will figure the approximate cost for service per pig, and estimate the relative increased value of the pigs because of their greater possibilities due to good sires:

First we will consider a boar costing \$100: Original price, \$100; care, equipment, etc., for four years, at \$100 a year, \$400; total, \$500; 30 to 50 litters in spring, 30 to 50 litters in fall, 60 to 100 litters per year, 6 pigs to litter, 360 to 600 pigs per year; four years, 1,440 to 2,400 pigs, or a cost per pig for service fee of about 33 1/3 cents.

In the case of a boar costing \$500, allowing \$100 a year for care, equipment, etc., or a total of \$900, the service fee per pig would be 60 cents.

It would be very difficult to estimate how much increase in weight and quality these boars would cause in their pigs, but a conservative estimate is that at from eight to ten months of age they would weigh 20 pounds more than

AN ORMSBY SALE

45 Registered Holsteins

Allana Farm, Dixon, Cal. Thursday, September 23, 1920

SIR PIETERTJE KORNDYKE ORMSBY

To adjust the partnership existing between J. P. and W. W. Phillips, the entire herd of registered Holsteins at Allana Farm, Dixon, Calif., will be sold at public auction on the above date.

A Son of Sir Pietertje Ormsby Mercedes

Allana Farm herd is headed by Sir Pietertje Korndyke Ormsby, the first son of the breed's greatest sire of long distance producers and show ring winners ever offered in the west. As an individual he ranks high, as the untouched photo of him shown above indicates. His dam is a daughter

of Sir Korndyke Hengerveld De Kol, second dam a daughter of Sir Ormsby Hengerveld De Kol, some of the most desirable blood lines of the breed. Here is a real opportunity to head your herd with a son of the famous "Sir Piet," four years old, straight and right in every way.

Females With Type and Breeding

The female offering includes some beautiful individuals, many of them of Ormsby breeding, the kind that have brought top prices in the best sales recently. Among them are

A 26 POUND COW with a good yearly record, and bred to Sir Pietertje Korndyke Ormsby.

A DAUGHTER of the above cow by a full brother to Pietertje Mald Ormsby.

A BEAUTIFUL 21 POUND 3 YEAR OLD that has 470 pounds butter from 12724.7 pounds milk to her credit in 197 days. Bred to Sir Pietertje Korndyke Ormsby.

A Choice Lot of Young Bulls

An unusually good offering of young bulls is a feature of this sale. They are a typey lot throughout, most of them of Ormsby breeding, many of which are bound to go at dairymen's prices, and some that are good enough to head registered breeding herds.

Every animal positively guaranteed to be a breeder; every animal over six months old tuberculin tested and sold subject to retest by the buyer.

NOTE.—Allana Farm is 1 mile northeast of Dixon on the main State Highway, between Davis and Dixon.

Catalog free on request. Management
California Breeders Sales and Pedigree Co.

C. L. Hughes, Sales Manager, Sacramento, California.

Auctioneer—Col. Ben A. Rhoades, Los Angeles.

pigs sired by inferior boars, which, at the present prices of pork, would mean an increased value per pig of \$2.40.

In these days when good pure bred boars are plentiful and reasonable in price, there is practically no excuse for using anything but a good pure bred boar, even though only grade sows are being used to grow pigs for the butcher. A good pure bred boar will sire a better quality of pigs than any other kind, and his pigs will have the constitution and capacity to utilize feeds to the best advantage and grow into market hogs of the best quality, or develop into individuals that will merit their being kept for breeding stock.

EARLY CASTRATION IMPORTANT

An experiment conducted at the Wisconsin experiment station shows the importance of castrating pigs early. In this experiment pigs varying in weight from five to 300 pounds were used.

A study of the following, says a

writer in the Progressive Farmer, will show the value of early castration: Weight of pig A, 151 pounds; weight of pig B, 122 pounds; weight of pig C, 61 pounds; weight of pig D, 40 pounds.

After castration the loss of live weight by bleeding and other causes was determined: A lost 1.3 per cent of live weight; B lost 1.67 per cent of live weight; C lost one per cent of live weight; D lost one-half of one per cent of live weight.

It required but very little effort to perform the operation on the young pigs, one man often being able to handle them; on the other hand, it required two or three men to handle larger hogs.

The after effects are very interesting. It was found that the young pigs recovered very quickly. They healed quickly and ate normally. The larger pigs were sore and stiff for several days and did not eat normally.

Pig A lost weight for four days and required more than a week to get back to normal gains. Pig D recovered normal gains in two days.

Several unweaned pigs weighing from ten to 15 pounds were weighed for a week and castrated. They did not lose weight but continued to gain the week after castration the same as the week before. They showed no signs of stiffness, soreness or loss of appetite.

It is seen from these results that the earlier pigs are castrated the less danger from loss of weight or serious results in any way.

Does It Pay to Feed Grain

By C. V. Castle, U. S. Department of Agriculture

Such a question may seem foolish to men who have had their dairy experience in the East or Middle West, but there are hosts of Western dairymen who do not feed any grain and are not as yet convinced that it will make them more net profit to feed grain.

With prices of grain as high as they are now the inherently low producing cow will probably not pay a profit on grain where alfalfa hay is abundant. But will the inherently low producing cow pay even for good alfalfa hay with labor and overhead as high as it is now? Most dairymen will say "no." What about the other cow, the one that might be a high producer if fed right? Will it pay to feed such a cow grain? The best answer is that the most prosperous and most progressive dairymen, even in the Western states, feed grain. Are they really making more net profit than those with good cows that do not feed grain? The cow testing association records of these grain fed herds in which the boarders have been culled almost always show more money at the end of the year, over cost of feed than similar herds not fed grain. Where excellent pasture is available the difference is not so noticeable but even in these places the most profitable herds are the grain fed herds. Here are some figures secured in a section where alfalfa hay is relatively cheap and grain very high:

Profit per cow above cost of feed, per year: 4 herds, grain fed, \$115; 4 herds, fed no grain, \$85; making a difference of \$30.

If the grain had been purchased more cheaply by cooperative buying the result would have been more in favor of the grain fed herds. This is

only part of the story. The effect of grain on developing the young cows, is worth while even if they only paid for the grain.

With a cow freshening and giving less than a pound of fat a day, unless a young heifer, it probably will not pay to feed grain or even keep the cow unless she is extremely persistent. For cows freshening and giving a pound and a half of fat a day, or more, eight to ten pounds of grain a day will keep the cow in condition and insure a more persistent flow of milk. For a cow that has been milked six months and is still giving a pound of fat a day, four to six pounds of a good grain mixture will keep her in condition and insure her persistency throughout her lactation period. It does not pay to feed less than four pounds of grain to a cow in milk nor less than two pounds to a dry cow. The grain fed should be a mixture of several grains. It should be palatable and composed of those concentrates which will tend to some extent at least to provide a balanced ration.

These amounts of grain are minimums and if you have never fed grain before it is better to start with the smaller amounts. Feed each cow according to her known characteristics and to her production. If you are afraid to feed all your cows grain, try it out on your best cows. Don't stop at anything less than a six months trial. The effect of grain feeding is shown more in its ability to hold a cow to a good milk flow rather than in any sudden increase at the time of feeding, and after all this is what counts because a cow, is supposed to work by the year and not just while she is fresh.

Importance of Milk as Food

The agricultural extension service of the Ohio state university has issued bulletin, Vol. 15, No. 3, "Milk, Its Importance as Food," by J. F. Lyon. It is a booklet of 20 pages and filled with tables and general statements as to cost of milk compared with other foods, and also explanation of where in milk is requisite to the growth of a strong and efficient race. The book is summarized as follows:

"Milk is a protective food, and as such is in the class of those foods whose liberal use protects health and promotes growth. It excels all other protective foods, being approached in value only by fresh, green, leafy vegetables such as lettuce, spinach, etc. The liberal use of milk is the best dietary precaution for maintaining good health in all individuals, and for promoting rapid, healthy growth in the young.

"The use of milk in the United States should be considerably increased. A pint of milk a day for each youth and adult and a quart a day for each child under 12 is a good standard. If the family income is low the use of meat may be largely reduced or eliminated altogether with safety to health, but under no circumstances should the use of milk be reduced below a pint per person per day.

"Milk is relatively cheap on the farm. The farmer's family should use it more liberally in cooking and as a drink. Such an increased use of milk is economical and leads to better health on the farm.

"From the standpoint of food conservation the production of milk is much more economical of feed and fodder than the production of meat. The substitution of milk for meat in the diet not only tends to improve the health of the consumer, but also to conserve the country's food supply.

"Milk, to be fit for human use, should be produced from healthy cows under sanitary conditions. It should be carefully handled until consumed.

"Milk is the most excellent food known because it is a complete food. It supplies energy and protein and, most important of all, it contains large quantities of mineral matter and of vitamins which are lacking in most foods, but without which nutrition fails.

"Milk is indispensable for infants.

"Children between the ages of 2 and 12 years are likely to suffer injury to health and strength if fed without milk.

"Adults can live without milk. Health and vigor are improved, however, when the diet of every adult contains at least a pint of milk per day.

"The liberal use of milk tends to maintain a sanitary condition in the digestive apparatus and to keep out those bacteria which produce toxic substances and which tend to bring on a condition known as autointoxication.

"All things considered, milk is an economical food. As a source of protein it is as cheap as or cheaper than foods of equal quality such as eggs, fish, and meat. As a fuel food milk is not nearly so cheap as the cereals and fats, hence these should be depended upon chiefly for the supply of bodily heat and for muscular energy. As a protective food milk excels all others. In the interest of health we can not afford to neglect the use of milk.

WOOL CONSUMPTION DECLINES

Reflecting the extensive shut-downs which have occurred in the wool manufacturing industry during the past few months, the July wool consumption report shows a consumption of 37,100,000 pounds of wool, grease wool equivalent, for that month, as compared with 63,000,000 pounds in July, 1919, a decrease of 41 per cent. While mill operations were less extensive in July than in any other month this year, there has been a steady decline in wool consumption since March, when 67,900,000 pounds were used. Reports for other months were: April, 66,900,000 pounds; May, 58,600,000 pounds; June, 46,000,000 pounds.

A comparison of the relative consumption of the different grades with figures for preceding months shows a gradual increase in the percentage of carpet wools used, while the percentages of the other grades have been fairly constant. The percentages for July are: Fine, 30.2 per cent; one-half blood, 17.6 per cent; three-eighths blood, 12.7 per cent; one-fourth blood, 20.7 per cent; low, 2.7 per cent, and

carpet, 16 per cent. The percentages for June were: Fine, 31.5 per cent; one-half blood, 15 per cent; three-eighths blood, 15.5 per cent; one-fourth blood, 20.8 per cent; low, 2.9 per cent; carpet, 13.9 per cent. In May the consumption of fine wool amounted to 30.5 per cent and carpet to 12 per cent.

HOW TO GET THE FULL BENEFIT OF A COW TESTING ASSOCIATION

The object of a cow testing association should be to provide means and methods for improving the dairy qualities of the herds of members, through the periodical weighing and testing of each cow's milk, which will give reliable information; on the basis of which unprofitable cows may be eliminated and feeding done more economically; and further, by ascertaining the profit or loss as compared with the cost of feed for each cow in the herd, through a monthly record of the value of her product and of the cost of the feed she consumes during the year; and in general to promote the dairy interests of the members.

While it is a fact that the cows in cow testing associations have a higher production record by more than a hundred pounds of butter fat yearly than the average production of dairy cows in the United States it is chiefly because the low producers are discarded and those remaining have received better care and feed and not because of any general effort to improve the quality of the livestock. The cow testing association enables the dairymen to select the good cows for breeding purposes but if he breeds these cows to mediocre bulls or bulls that are no better than the cows he keeps, there will not be the improvement that we should look for.

The feature of cow testing association work should be emphasized far more than it has been because the results should be of far more importance than even the culling of low producers.—J. E. Dorman.

ANOTHER DELICACY FOR THE HOG

The gastronomic potentialities of fish have added another course to the daily diet of the hog. This course is in the form of fish meal, a refined by-product made from sound wholesome raw material for the canneries. Do not confuse fish meal with fish scrap, which is a much coarser by-product used for fertilizer. Formerly all cannery waste was made into scrap, but now the clean, sound portion is ground to a fine palatable meal of extremely high protein and oil content, and may be used to replace tankage in the rations of hogs, poultry and dairy cattle.

The feeding value of the meal is equal to high grade tankage and its method of preparation has removed the disagreeable features of formerly prepared fish rations.

Experiments with fish meal thus far have not tainted the flesh or other products used for human food of any animals to which it has been fed.

The rancher by feeding this product to his animals instead of directly depositing it on his land gets the benefit of its food value and also the fertilizer from his animals. In this manner two profits accrue from the material so fed.—S. O'T.

DAIRY COW COMPETITION

County Agent Gordon is in charge of a dairy cow competition to be continued through the coming year by Los Angeles County farm bureau. There are series of monthly and yearly prizes to be given for highest average production in herds under 60 and in other herds of between 60 and 150 cows, also in herds over 150. There will be other prizes for highest individual production of both pure bred and grades; also for best five cows.

AN OPTIMISTIC BRIDE

"It's quite a secret," said Maureen, "but I was married last week to Pet Sullivan."

Jane—"Indeed, I should have thought you'd be the last person in the world to marry him."

Dispersal Sale

106 Registered Shorthorns

77 Females---29 Bulls

WILLOTTA RANCH

Owned by William Pierce

Suisun, California

Thursday, September 30, 1920

The females in this offering are a good, useful lot of breeding cattle that have been handled strictly under range conditions, representing many years of careful selection of regular breeders and the heavy milkers that produce and develop well grown, rugged calves. A large number of the females are granddaughters of the famous Glide bull KING EDWARD.

Over 30 Cows with Calves at Foot

Besides the females there will be 29 bulls in the offering, a large percentage of them ready for service. They are all reds, out of the selected dams in the herd, and ready to go out and work improvement in range herds.

AUCTION

105 Head of Dairy Cows and Heifers 105

Registered Holstein Bull

At our dairy on Kearney Boulevard, 8 miles west of

FRESNO

Thursday, September 16th

at 9 A.M. Prompt

The owners are dissolving partnership and have instructed us to dispose of a splendid herd of dairy cows and heifers on above date.

Positively Without Limit or Reserve

Included in this good herd buyers will find 75 cows, mostly Holsteins, a few Jerseys and Durhams. There are a number of fresh cows and 20 head of heavy springers. There are 30 head of choice Holstein heifers, 14 to 18 months old, all selected from the best producing cows in the herd and by registered sires.

The cows in the herd are young. The foundation herd was purchased mainly from selected cows in the Frank Helm and Bert Vogel herds near Fresno. By careful selection in the use of high-class pure-bred Holstein sires, the present choice dairy herd has been built up and it is considered one of the top dairy herds in the San Joaquin Valley.

Prospective buyers are cordially invited to visit the dairy prior to the sale and look this good herd over.

One pure-bred, registered Holstein bull, sired by Segis Pontiac Mead 148980 and out of the good producer De Kol Burke Lyons Maud 179277.

Twenty ten-gallon cans, aerator, cream cooler, 2 tanks, 2 De Laval separators, pails, etc.

Two horses, weights 1,300 lbs. each. Saddle horse, saddle and bridle.

TERMS: \$100 and under cash, over \$100, one-fourth cash, balance in 8 monthly payments, with bankable note bearing 8% interest. Buyers from a distance must furnish bank reference.

Don't miss this.

MANY ENTRIES FOR LOS ANGELES LIVESTOCK SHOW

Plans are completed for the greatest combination of livestock, educational and entertainment features ever held in Los Angeles during one show, with entries to date of upward of 600 pure bred animals, among them grand champions at the state fair and the national show,—the Los Angeles Livestock Show, Exposition Park, October 2 to 10.

The closing date for entries, September 5, brought telegrams and letters reserving space in excess of the 125,000 square feet provided in the original building plans. Thus the 1920 Livestock Show is assured of highly gratifying support from breeders and exhibitors.

In order that all the people, dwellers in city, town and country, may be made to know of the scope of this show and of its educational possibilities, the directors have inaugurated a comprehensive campaign. Daily, weekly and monthly newspapers, railroad lines, agricultural clubs, breeders associations, chambers of commerce and civic bodies, all are assisting in a drive to bring 200,000 people to Exposition Park during the nine days, October 2-10.

Nine full days of spectacular events both educating and diverting are promised by the management. The program will include hundreds of exhibits of famous pure bred animals, daily horse show, rodeo, racing, poultry and pet stock show, and countless timely surprise features.

That the Los Angeles Livestock Show is being supported by breeders everywhere is proved by the following list which includes entrants from the Atlantic to the Pacific:

Dutch Fork Stock Farm, Easton, South Carolina, and Pleasant Hill Farm, Bethany, Illinois, breeders of Tamworth and Yorkshire swine.

Western entries of from one to 26 animals include:

Hereford cattle. Kern County Land Co., Bakersfield; Babbit & Cowden, Cashion, Arizona; D. H. Ogden, Alpine P. O., California; Diablo Stock Farm, Danville, California; Glendale Stock Farm, Aspen, Colorado; Wm. Briggs & Son, Dixon, California.

Shorthorn cattle. Diersson & Vaughn, Sacramento; Maxwell-Miller Co., Steamboat Springs, Colorado; Easton & Ward, Diablo.

Guernsey cattle. A. B. Humphrey, Escalon; Hollow Hill Farm, Colton.

Hampshire swine. Tarzana Ranch, Van Nuys; Josh L. Wilson, Jr., Laramanda Park; Carl G. Meinois, Ojai.

Poland-China swine. Viola L. Renwick, Santa Barbara; Chas. Wm. Cooper, Rivera; J. L. Hall, Lomita; J. L. Dunlap, Pomona; Charles Mull, Downey; Orison D. Bragg, Los Angeles; Bruce White, Downey; Byrum Zinn, Los Angeles.

Duroc-Jersey swine. Mrs. R. E. Whitley, Van Nuys; Chester Irish, Norwalk; Winsor Ranch, Bonita; Conejo Ranch, Newbury Park; J. E. Thorp, Lockeford; D. H. Pores, Van Nuys; E. F. Meyers, Lankershim; Hewitt Bros., Van Nuys; G. E. Gordon, Los Angeles; F. E. Lewis, Spadra; Lloyd Ruether, Hynes; Gordon White, Willowbrook; Alton Price, Artesia; Errell Ryon, Watts; Ira Fuller, Gardena; Duke Ruether, Hynes; Harold West, Artesia; Cecil French, Artesia.

Berkshire swine. A. B. Humphrey, Escalon.

Holstein cattle. Anita M. Baldwin, Santa Anita Rancho; J. J. Jeffries, Burbank; George Junior Republic, Chino; A. J. and E. R. Stalder, Riverside; Burr Farm, Los Angeles.

Jersey cattle. J. E. Thorp, Lockeford; Grant A. Brown, El Monte.

Toggenburg goats. Mrs. L. O. Rhodes, Pasadena.

Anglo-Nubian goats. Emma Kraft, Los Angeles; Belle F. Miller, La Crescenta.

Saanen goats. H. F. and L. I. Schinker, Eagle Rock.

Mules. R. C. Foote and W. M. Delano, Artesia.

Horses. Anita M. Baldwin, Santa Anita Ranch; R. L. English, Chino; Maude Banks, Covina; Fred Bixby, Long Beach.

FORAY UPON CATTLE BRINGS RESULTS

By A. L. Spellmeyer

DISINTERESTED and acute observer has just returned from the Imperial district. He is not a cattleman but is a real estate man who has vision and knows that farmer prosperity means city prosperity and that farmers' profits must come from livestock to a great extent.

He reports that Imperial stockmen are angry with killers and that the beef end of the business has been virtually ruined, but that there is a quiet elation now prevalent with steers highly estimated. In fact, the Imperial men who have the cattle and feed are chuckling in anticipation of what is going to happen this winter. There are unmistakable signs of panic among the killers who don't know where they are going to get their beef after awhile and are just beginning to realize what they have done to supply with their confiscatory tactics of continual loss to producers. Great acreage has been put into cotton until it is difficult to find feed for even the local dairy stock at any low price.

With ruthless certainty and inevitable progress the common economic laws are working out; results are commencing to show. The great cotton acreage means surplus cottonseed. From this cottonseed oil is extracted, but the hulls and part of the meal must find the only possible outlet, to fatten beef cattle. The alfalfa being cut down cuts down stock numbers, but increase of concentrates demands mature steers to feed, which are not here. Two things are sure in Southern California: one that this will be a great cotton manufacturing and tire manufacturing center, and another that it will be a great beef feeding point for the entire Southwest, with surplus going to the Middle western markets. Each day that passes makes certain that a stockyards or some sort of exchange will develop from this surplus here of hulls and meal for cattle and the further certainty that with high freight rates it is cheaper to transport beef live weight or in refrigerator cars than to ship feed to cattle.

There isn't anything complicated about all this, and the big bluff by the packer or the sage opinions of some cattle buyer as to great cattle surplus and cheap stock, etc., all may be swallowed by receptive countrymen, but that doesn't affect facts finally.

The plain fact is that Los Angeles kills about a quarter of a million cattle and calves yearly for beef, that San Francisco does likewise, and that the balance of the state adds more and the total Coast kill reaches up towards the million mark.

Where are they coming from? California hasn't them, neither has Arizona, New Mexico, Utah or Nevada. The East is going to fight hard for the few in Montana, Wyoming and Texas.

We note a \$17.50 top price in Chicago, but everyone expects 25 cents before winter is over, and what is far more than the top price for a few head will be the higher price of a probable 15 to 18 cents for the average fat beef steer before 1921 is very old.

LIVESTOCK MARKET TERMS APPLIED TO HOGS

"Top" is the day's extreme high price for carload lots.

"Bulk" is a term meaning the preponderance of sales for the day or period.

"Dockage" is a specified weight deducted from sows and stags originally used for breeding purposes which are coarse and rough—on sows dockage is 40 pounds.

"Prime heavy," hogs weighing 300 to 400 pounds, prime condition, form and quality. Usually ten months to 18 months and are heavier as well as older than the majority of the hogs marketed.

"Medium heavy," good hogs weighing 240 to 300 pounds. Both the prime heavy and medium heavy hog depends largely for outlet upon the packer. Most popular in fall and winter.

"Butcher hogs," most popular class on this market. Must be of right weight for the butcher block, from 190

to 220 pounds in most cases (although at times lighter or heavier), of good quality and proper condition. Nothing grading less than a good hog has a place in this class.

"Shipping hog": Shipper is a hog of good form, condition and quality used to supply order trade. The requirements vary, but for the most part call for animals weighing 175 to 200 pounds.

"Lights" are hogs weighing 160 to 190 pounds, consisting principally of young light weight barrows or clear sows. Graded good, common and inferior.

"Light lights" weigh from 130 to 160 pounds; graded good, common and inferior.

"Pigs" are graded as choice, good and common, and are subdivided as follows: Strong weights, 130 to 150 pounds; medium, 110 to 125 pounds; light, 90 to 110 pounds.

"Peweese," young small pigs from 60 to 80 pounds. Usually sell at a considerably lower figure than the heavier pigs.

"Roasters" are pigs weighing 15 to 40 pounds. They are rarely seen, except around Thanksgiving or Christmas.

"Roughs" are throwouts too common to grade, lack condition, form and quality.

"Stags" are male hogs castrated after maturity. As they are wasteful in

dressing, a dockage of 70 pounds is imposed.

"Boars are not usually marketed until their days of service are over and are therefore old and coarse. As most stockmen have found from experience that it does not pay to send in boars, very few of them come to market. They sell at a much lower price than stags.

"Mixed packers": This class involves the heavy hogs that do not have the quality to grade as prime stock and the lighter weights that are not good enough for butchers or shippers. In short, it takes in all of the throwouts of the aforementioned classes, except those too coarse.

"Singer": A hog of narrow back and straight belly, particularly used for its lean bacon. Weight 160 to 200 pounds largely, although there is no standard weight. Must be of good quality, not necessarily fat. Popular in Canada and England, but not common in this country.—National Livestock Exchange.

Lanini Bros., near Fresno, will hold auction sale this week, Thursday, September 16, of their dairy herd. The herd comprises 105 head and is a very uniform bunch, the foundation stock being obtained from the Helm and Vogel herds of Fresno. Rhoades & Rhoades of Los Angeles will conduct the sale.

GLENN COUNTY FARM BUREAU DATES

Jacinto, September 16; Codora, 13; Capay, 15; Plaza, 17; Willows, 20; Grapevine, 22; Larkin, 24. Directors, Willows, 1:30 p. m., 25.

ONE OF THE WORLD'S GREATEST DAMS

GERBEN ABBEKERK MAID

In the Kingdom of Farm Animals there is an occasional great female who stands out as an extraordinary dam; who possesses outstanding individual excellence herself and who demonstrates in a marked degree the power to transmit her excellent qualities to her descendants.

GERBEN ABBEKERK MAID, the famous registered Holstein cow owned at Rosamaines Rancho, unquestionably ranks as one of the world's great dams, and here are a few of the reasons why: Although now only nine years old she is the dam of nine living daughters and sons, six daughters and three sons; she has three times produced over 30 pounds butter in 7 days on official test, twice over 34 pounds in 7 days; she has three official record daughters; she has a proven son who ranks among the best of the younger sires of the breed; and as her descendants are all young, her real worth as a dam has only begun to be demonstrated; and get this—THERE ARE 105 DAUGHTERS, SONS, GRANDDAUGHTERS, GRANDSONS, GREAT GRANDDAUGHTERS, AND GREAT GRANDSONS, of this wonderful cow in the herd at Rosamaines Rancho, every one of which will be sold in the

When Writing Advertisers Mention California Cultivator

PETALUMA, THE POULTRY CAPITAL

(Continued from page 317)

more than 50 per cent of all the eggs shipped to the San Francisco market, and with its selling connections in all the principal egg markets of the country enables the producer to secure full market value for his products. The association maintains at Petaluma the largest egg packing warehouse, in the world, where eggs are prepared for shipment to all parts of the world. In 1918 the association handled 263,532 cases of eggs, or 660 carloads, valued at \$2,500,000, many of these eggs going to Eastern markets in competition with other egg centers of the country.

While a number of the chicken ranchers prefer to set their own eggs, the great majority of them purchase their chicks from the commercial hatcheries, of which there are eight large and 20 small ones at Petaluma. The largest of these hatcheries has a capacity of 250,000 chicks every three weeks and an annual output of over two million. The majority of the chicks hatched in these plants are sold to the nearby ranchers, but a certain number are shipped daily to all parts of the country.

One of the hatcherymen, A. E. Burke, devised a plan to successfully ship day old chicks to distant points in paper cartons, and his scheme has been adopted by other concerns until today a steady stream of chicks who "haven't scratched yet" go out from the express offices of the district. As newly born chicks go for 72 hours before receiving food or water (being sustained by the yolk of the egg that enters the abdominal cavity), it has been found that they can be shipped at this time without hardship.

The majority of the chickens raised in the Petaluma district is of the White Leghorn variety, because it lays large white eggs and produces a maximum number of eggs annually. The average Sonoma County hen is supposed to lay at least 100 eggs a year to be considered profitable, and many growers secure a larger production. While the method of handling the hens is very much the same throughout the district, a wide range is encountered in the feeding plans of the owners. Nearly every rancher is constantly experimenting with different combinations of feeds to increase or sustain egg production, and often adjoining chicken farms will use entirely different methods of feeding. Every known device for determining the individual records of hens, such as using trap nests, etc., are found in the district, and when a hen shows that she is loafing on the job her laying days are over and she becomes the "piece de resistance" for some city feast.

To exemplify the difference of opinion that exists among the producers in the matter of feeding, the following quotation is taken from a letter of one of the younger, but very successful, egg producers of the district:

"Regarding schedules of feeding, there is a vast difference of opinion. Some people have been feeding the same as they did ten years ago (the old timers); others, like myself, are using greatly improved methods. For instance, I always feed a dry mash and for a grain feed use equal parts cracked yellow corn, milo maize and 30 per cent hulled oats. Most of my neighbors think that I am insane when I feed yellow corn during the summer months, but nevertheless we are having wonderful success."

A number of large factories for the manufacture of poultry appliances are located at Petaluma, and the incubators, brooders and other accessories for poultry raising are made in Petaluma and shipped to all parts of the world. One of the largest manufacturers of these appliances, and the inventor of the first successful incubator, has the distinction of being the founder of the poultry industry at Petaluma.

In 1878 L. C. Byce came to Petaluma from his home in Canada because his health demanded that he live in a more favorable climate. When but 12 years old Mr. Byce had discovered some new born chicks hatched by the heat of a manure pile alongside his father's stables, and from that time on he devoted his spare time to inventing a commercial incubator. Through the years that followed his youthful discovery, the young man worked on his invention, and when he arrived in California he had almost

perfected it. To enable him to experiment with his machine, Mr. Byce sought to purchase some chickens in Petaluma, but was unsuccessful, and he states that before he could secure the three dozen hens he required it was necessary for him to travel with a team and wagon over nearly all of Sonoma County to meet his needs. Later on, to meet his increased needs for chickens, Mr. Byce had to send East for hens, and it was his flock that formed the nucleus for the multitudes of chickens—now over 6,000,000 laying hens—that are found in the vicinity of Petaluma. Mr. Byce, after perfecting his incubator, started their manufacture at Petaluma, and from an humble beginning his plant has been developed to a point where thousands of machines are shipped annually to all parts of the world.

Poultry Queries

Featherless Chicks

Why do some of my young chickens become featherless while others in the same brooder feather out normally?—Subscriber, Long Beach.

Two reasons are assigned for failure to feather out normally; overheating in the brooder and weakness in the chick. The ration has no doubt also something to do with the growth of feathers though its effects are not always apparent. Feather growth requires protein. This is one reason why bran is such an important ingredient of the chick mash and why the mash should contain a larger per cent of animal protein than that of laying fowls. One of the best mashes for growing chicks is the Cornell mash, which consists of equal parts by weight of bran, corn meal, middlings and beef scrap, with one-third part bone meal added. It is for you to find out which of these causes is responsible for the failure of your chicks to feather as they should, and

"Pride of Petaluma" and Her Happy Family

THE PRIDE OF PETALUMA TRIPLE CONE VENTILATING BROODER STOVE HAS A DIRECT OIL BURNER, NO WICK, Burns Coal OIL or DISTILLATE with PERFECT SATISFACTION. Automatic REGULATOR Controls the Flow of Oil. This Stove is so constructed that the heat is evenly Distributed over the FLOOR where the BABY CHICKS MUST have it.

THESE STOVES are built in THREE sizes, 2-B, 4-B and 12-A.

THE KRESKY STOVES are built up to a STANDARD and NOT down to a PRICE.

Capacity, 500 to 1500.

to remedy it. A few poorly feathered chicks in a brood need cause no concern, for there are always some that are behind the rest in vigor, but if many fall to feather out properly it points to overheating, overcrowding, which amounts to the same thing, or lack of protein in the ration.

Chicken Ticks

Can you suggest a way to free young chickens from ticks? I have cleaned the house but I notice these ticks when dressing the chickens.—E. M. H., Paradise.

I think vaseline, either the plain white or the carbolated, applied liberally to the ticks two or three times a day will kill them by smothering. I know it kills sticktight fleas, and I see no reason why it should not have the same effect on ticks.

Digestive Trouble

What is the matter with my chickens and turkeys? In May they began running off at the bowels. Some of them finally recovered, but on May 15 one of my seven months' old pullets got so she could not walk. She acted as if her feet were sore or her back was broken, would just hobble along and flap her wings. She has been that way now for three months.

My young chickens are stuffy in the nose and have a rattle in the throat. What ails them?—Subscriber, Longvale.

There must be serious errors in feeding this flock. As I am told nothing of the ration they receive I can only infer that it is not properly balanced and that possibly moldy or heated grain has been fed. As for the young birds my guess is that they have taken cold from being crowded into close quarters at night. Chicks kept under such conditions are almost certain to take cold when they come out into the chilly or foggy morning air. Get them into coops where the air is almost as fresh as out of doors, the smaller the coop the more sides it must have open to the air. Give them a chance to run on clean soil and make sure their food is clean and sweet, and you will not have much sickness.

Now, as to the ration of the older birds: The feeding of laying hens is a very simple matter. A good laying mash before them all the time, all the green they will eat once a day, preferably at noon, a mixture of hard grain at night. The mash may be one of the commercial mashes of which there are so many satisfactory ones, or it may be prepared at home from bran, corn meal and one other ground grain, with from 16 to 20 per cent beef scrap. If one has had no experience in mixing mashes it might be wiser to buy the ready mixed. The greens may be alfalfa, barley, kale, chard, lettuce, Sudan grass, cabbage, vegetable leavings from the kitchen, anything green that the hens like, only the more succulent the better. It may be lack of green feed that has upset your fowls' digestion.

The pullet that could not walk may have sustained an internal rupture, but such troubles often come from severe indigestion. If she is not on her feet by this time better kill her.

Price of Pullets

Could you give me an idea of what Buff Leghorn pullets three and four months old would be worth? Mine are from show stock, but neither they nor their parents have been shown.—Subscriber, Fresno.

It is very hard to set a price on birds that have never won ribbons. As a rule a utility price is all you can hope for, and that for pullets three and four months old is around \$1.25 or \$1.50 if they are well developed and of good color. Something depends on your market, of course. In my town it is hard to get more than \$2 for a full grown pullet, and lots of folks think they ought to get them for half that. The fact that it costs at least \$2 to raise a pullet to laying age means nothing to them. If you live among people who understand what a laying hen is worth maybe you can do a little better.

Stick-tight Fleas

Will you kindly advise the best means of getting rid of stick-tight fleas?—Subscriber, Ramona.

Vaseline rubbed on the fleas in sufficient quantity to smother them is a sure cure. This requires several ap-

POULTRYMAN'S CALENDAR—SEPTEMBER, OUR SECOND SPRING

Much of the work of September in California is work that in the East would be done in the spring. Greens and vegetables should be planted this month, houses cleaned and disinfected, and unpromising pullets sent to market.

September is none too early for the forward look to the hatching season, which begins in January or sooner. If fall hatching is contemplated brooders and brooder houses should be cleaned and made ready for use, and breeders culled if necessary.

September is also the last month for general culling of the layers. Hens that have not commenced to molt by the first of October are the best layers in the flock and should be kept another year.

Those who find it desirable to get out a few broods of chicks in September will find it fine weather for brooding and will have fryers for Christmas.

plications, but is simple and efficacious. After two or three applications you will see the dead fleas dropping from their victim.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

The ninth month, ending August 15, finds D. B. Walls of Petaluma still in the lead, but closely followed by several others. A large percentage of the hens are now in the molt, but it is hoped that many of these will come out and be laying again before the contest closes on November 15. During the month a slight change was made in the feeding. One-fifth of the grain ration is now being fed in the form of sprouted oats. This is to

stimulate appetite on the part of the molting hens.

High pens for the month were: Barker, 201 eggs; Gibson, 199; Neef, 198; Bellows, 195; Gibson, 190.

Leading pens: Walls, 1,703 eggs; Gibson, 1,663; Rose, 1,659; Bellows, 1,649; Enterprise, 1,643; Gibson, 1,607; Neef, 1,590; Peck, 1,568; Wood, 1,563; Barker, 1,562; Amsbaugh, 1,512; Wilson, 1,503.

Report for the Week Ending August 21, 1920

During the past week B. F. Rose of Santa Cruz has jumped into place again with a total count of 1,694 against R. C. Gibson's 1,691.

The high pens for the week were: Bellows, 44 eggs; Neef, 43; Gibson,

40; Barker, 39; Rose, 39; Stephenson, 37; Clark, 34; Wilson, 34.

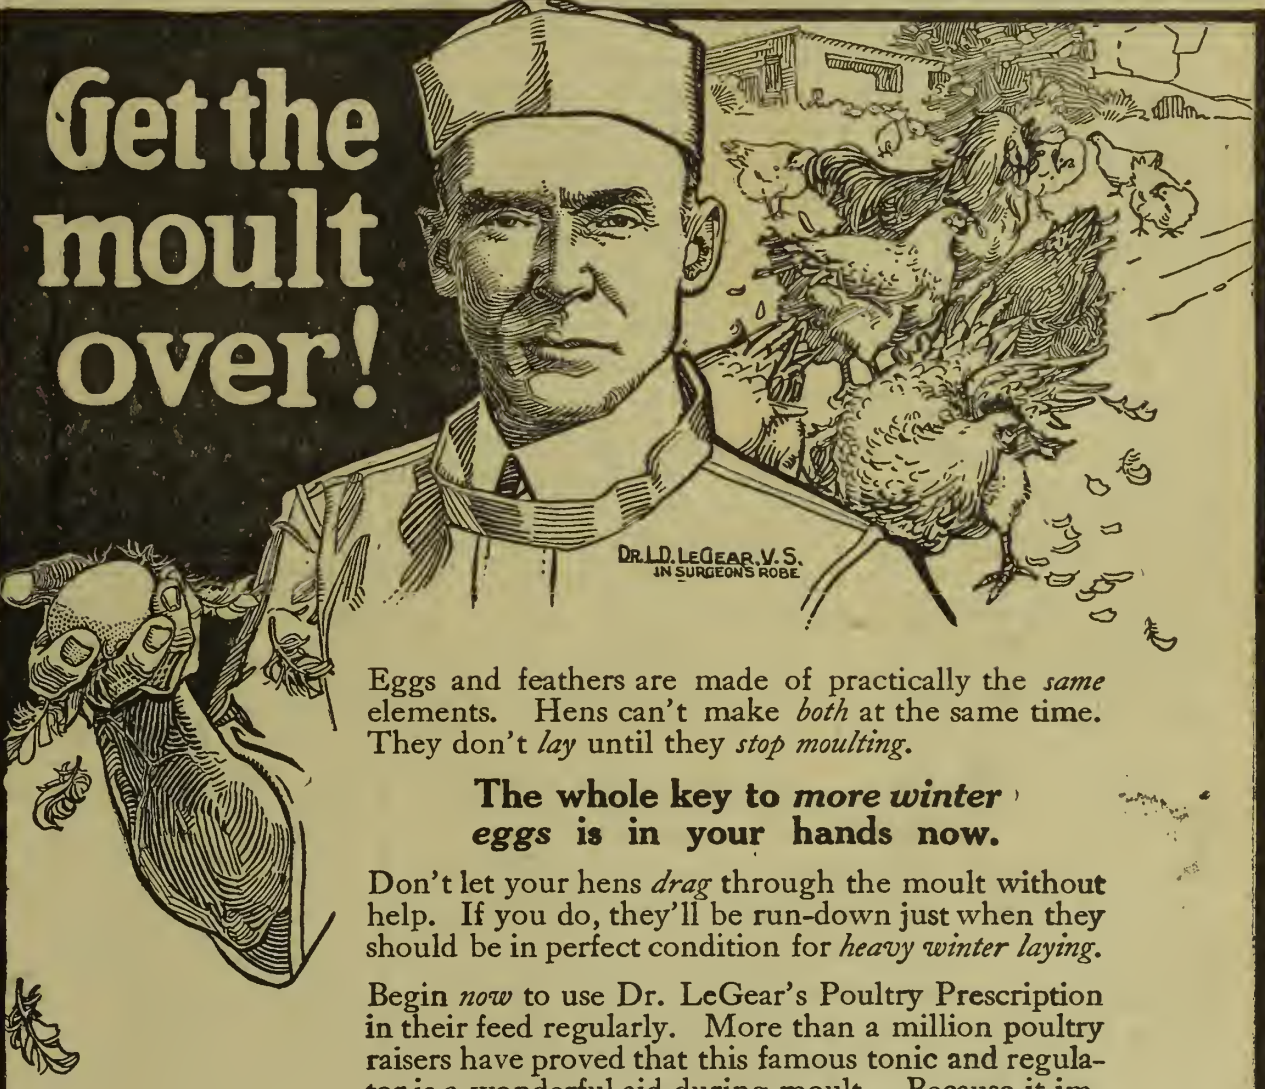

GROUND BROKEN FOR NEW CONTEST

The morning of August 21 saw ground being broken for the new California Farm Bureau Egg Laying Contest. This new plant, located on one of the choicest sites in Santa Cruz, will cost in the neighborhood of \$10,000. Geographically it is located very favorably for all of California, while climatically it embodies that mild coastal climate which has proven to be of the best for both the health and production of the hen.

Beginning with the new contest, which will start on the first day of next November, the poultry division of the state university will have entire charge of the operation, making it part of both the poultry and extension divisions of the university. It is our hope to make this work one of the biggest credits to the poultry industry of California. It will afford California an opportunity to show the world what can be done with poultry under our fine climatic conditions.

Therefore we ask the help of every progressive poultryman in the state in getting enough entries to make this work a success. Write to either Poultry Division, University of California, Davis, or to Poultry Contest Station, Santa Cruz, for rules and regulations and application blanks. Do it now!

Get the moult over!

DR. L. D. LeGEAR, V. S.
IN SURGEON'S ROBE

Eggs and feathers are made of practically the same elements. Hens can't make both at the same time. They don't lay until they stop moulting.

The whole key to more winter eggs is in your hands now.

Don't let your hens drag through the moult without help. If you do, they'll be run-down just when they should be in perfect condition for heavy winter laying.

Begin now to use Dr. LeGear's Poultry Prescription in their feed regularly. More than a million poultry raisers have proved that this famous tonic and regulator is a wonderful aid during moult. Because it improves the whole digestive system, hens get full value from their feed. That means a quicker moult, without strain. Give hens this help and get more winter eggs.

Dr. LeGear's Poultry Prescription

Prepared from my 28 years' poultry experience and veterinary practice. Sold by 44,000 dealers everywhere—never by peddlers. Go to your dealer today and get a package—results or money back.

THE ORNAMENTAL GARDEN FOR SEPTEMBER IN SOUTHERN CALIFORNIA

By C. B. Messenger

NE of the most glorious of all of our flowers, the iris, needs attention this month. If one has none of this flower in the garden, this is the month for securing new plants, or other roots, and if one has plants more than two years old they should be subdivided and given opportunity to make new and more vigorous growth. For best results this should be done before the end of September. Prepare ground deeply, working in manure if available, but this not too close to the roots. Better, perhaps, is an application of bone meal with a bit of dried blood. After the ground is leveled dig shallow trench and place the divided roots ten or 12 inches apart and cover rather lightly. Remember iris should not be buried too deeply. After covering flood with water so as to establish and be ready for the new seasons' growth, which will begin within a few weeks.

Tuberous rooted begonias should be given particular attention and a bit of fertilizer to push them to their full glory. But the principal work, perhaps, in garden this month is clearing the rubbish of summer's growth. The old dead stalks of Watsonias, adonis, asters, in fact, pretty nearly everything, even the goldenrod and golden glow, are now nearly ready for pulling up and adding to the compost heap. They are unsightly and make a remarkably fine addition to the garden after a year of lying in the compost heap with other rubbish, a little manure and other dirt. Likewise, divide plant Watsonias, nearly all the varieties of narcissus, ornithogalum, eschias, ixias, anemones and ranunculus and other spring bloomers.

If a new lawn is contemplated, begin on it quickly. Irrigate, let the seeds start, hoe and get ready for seeding in October. An October seedling gives the blue grass and clover a chance to get well rooted and thor-

oughly established before the Bermuda can get in. Bermuda is not a lover of cold weather and does but little growing through the winter season.

Roses which have been dried off until the new wood has begun to shrivel may now be given severe pruning. After this is finished and the brush burned, apply water, apply most liberally of fertilizer and an abundance of December bloom will reward.

AS USUAL—THE BEST EVER

(Continued from Page 315.)

tors made after plans and specifications as given by Prof. Cruess in a recent Cultivator. One was made by a schoolboy. It's a bit crude but a success in delivering the goods. Miss Clark is in charge of this exhibit.

Near by is the dairy products building and laboratory of the university. That is where 52 exhibits of milk and cream were scored which added to the fame of California dairymen. Los Angeles takes the honors. In the certified class, Adohr won first with a score of 99.2 per cent; Cold Springs second, 98.4; Arden third with 96.3.

Guaranteed milk: Brandt Rancho, 99.1; Burr Creamery, 96.7 (Burr Creamery is owned and managed entirely by cooperating dairymen).

Grade A raw: Crescent Creamery, 98.8; Mrs. L. Brant, 97.4; Liberty Dairy, 97.2.

Market milk, raw: G. A. Carter, Fresno, 96.3; C. P. Gulberg, San Leandro, 95.7; Joe Tomagni, 95.4.

Pasteurized: Crescent Creamery, 98.8; Burr Creamery, 97.5; Model Dairy, Redlands, 90.7. When no address is given all of above are Los Angeles creameries or dairies.

In guaranteed cream Brandt Rancho first, 92.9; raw cream, Crescent, 90.3; pasteurized cream, Crescent, 93.5.

But pardon me. This was to be only a word to say that a half dozen of Cultivator folks are here getting a story. I did not intend to give details, but that one item as to milk scoring indicates that Californians are drinking clean, pure and rich milk. R. J. Posson of the dairy division of the U. S. D. A. spoke most highly of the work of California dairymen.

The big central building, the main building, or "horticulture" or "agriculture"—variously named—has a fine, I might again say a wonderful, exhibit of products of this state. Judges are awarding the big money today.

The attendance is big. Today—Admission Day—the grounds are uncomfortably filled and it's only noontime.

President Roeding looks tired but says "We're satisfied."

HEARING ON COTTON QUARANTINE

The state department of agriculture finds it necessary to strengthen the quarantine against cotton boll weevil and will hold a public hearing on the matter at Room 507, Union League Building, Los Angeles, at 10 o'clock a. m., September 14, 1920, in order that any person interested in the proposed quarantine may appear and be heard.

TULARE COUNTY AGRICULTURAL SHOW

The premium book for the second annual Tulare County Livestock and Agricultural Show to be held September 14, 15, 16, 17, 18, shows that nearly every activity in the livestock, agricultural, commercial and mechanical line has been covered.

WHEAT IN URUGUAY

The United States consul reports: "In spite of the fact that the time for sowing wheat and other grains for the winter crop is yet some time off there have been more than 1,500 orders received for selected seeds by the official seed commission. These orders are scarcely exceeded by those received the entire previous year. More than 500,000 kilos (more than 1,100,000 pounds) of wheat and 400,000 kilos (880,000 pounds) of oats have already been sent to planters in the interior, these amounts exceeding all the orders received during any previous year."

SELFISHNESS

If you can step aside and let another pass you on the way,
And watch him win the goal he seeks and have no bitter word to say;
If you can stop along the road to help another in distress,
And never count the time you spend as lost unto your own success;
Then, spite of all that may befall of Failure's frown or Fortune's smile,
You've reached the height of manhood here and learned to make your life worth while.

The clutch of selfishness is strong; men wish to gain before they give;
When we are living at our best we grant another's right to live.
But few of us will bear the blows and face the tempest and the storm,
And shiver with the winter's cold, to keep a fellow-being warm;
And few of us will step aside to help, by deed or kindly speech,
Another man unto the goal which he is striving hard to reach.

If you can step aside and lose your own brief moment to succeed,
And let its fame and fortune go to help another man in need,
Can see your dreams of glory fade and never stop to count the cost,
And hold the cause which you have served more pressing than the goal you've lost,
You've reached the height of manhood here, and many prayers your life shall bless,
And you shall stand before your God as one who conquered selfishness.
—Edgar A. Guest.

THE RUBY KEY

By Clara Peterson

PRINCESS DORIS of Deeland was very angry and her blue eyes flashed. She was fifteen and a half years old and had reigned for a decade, but at last her wishes were being crossed.

"I love him!" she cried to the Prime Minister. "I am sure I love him; perhaps not as he loves me, but better than anyone I know. I do not ask to marry him at once. All I request is the key to my own heart."

The Minister spoke soothingly, stroking his beard.

"I understand your wish. No doubt the Prince of Panillac does love you and realize that your love will never be safely his until you have looked into your heart and given him the key, but this key I cannot turn over to you until your sixteenth birthday. It was your father's last request. The King's life was not a happy one and he wished his daughter to be heart whole and care free as long as possible. He could not foresee that you would meet this prince and consider yourself in love while yet your heart was locked."

The Princess pouted, but she was as wise as she was cold and she knew that the Minister spoke the truth.

"I shall not ask again," she said proudly. "Be ready on my sixteenth birthday to hand me the key."

The Prime Minister bowed and withdrew.

Now the palace of the Princess of Deeland was a most wonderful place. King Maladin had been a collector of rare and beautiful birds and the conservatories were filled with them. There were rooms full of paintings and curios so wonderful that even the servants never tired of gazing. Perhaps this was why so little work was done in the palace.

Most of these servants were blonde, sedate people who moved languidly. They were always busy when anyone was watching—brushing tapestries, polishing the gold of the chairs and sweeping the costly rugs—but there was one little servant who really worked. Her name was Nanette and she was the oddest looking person in all the palace. She was slim, and very dark with tangles of black hair and bright brown eyes that peeped timidly at the young duchesses and peers.

Nanette still wore the dress she had had on when she reached the palace. All the other servants donned uniforms of fine linen, but they fought so over them, each trying to get the best, that Nanette never even tried to obtain one, but wore her black dress without a complaint and washed and dried it while the others slept.

It was she who dug into all the corners and swept up the dirt that had collected for weeks and weeks. She picked up the rugs and shook and beat them as hard as she could. She cleaned the backs of the chairs and the walls behind the paintings.

The other servants began to scorn Nanette and finally the younger people of the court noticed it also. Perhaps her industry shamed them. At any rate, Arabella, a young countess with yards and yards of red gold hair, called her friends together and said haughtily:

"I shall ask the Princess to get rid of this funny little maid who is always scampering about like a rabbit. Whenever I pass her, she stares at me with her big brown eyes until I feel creepy. She is of little use anyway, always cleaning the places that do not show. Let us go now and ask the Princess to send her away."

The others were in accord with this. "She looks so out of place!" cried little Lady Lillian, arising and adjusting the emerald ornaments upon her bodice. "When we have an afternoon tea or even a party there is her black dress flying about. It spoils everything."

They all ran toward the Princess' room. It was really quite a favor to ask, for in Deeland servants were difficult to obtain.

Now little Nanette had been cleaning a particularly dark and dirty corner in the red room and she had heard everything that was said. She still sat there, a miserable little heap, for she wanted to stay in the palace more than anything else in the world. She had worked very hard and she was lonely, but she was near the one person she loved, the gardener's son Orin, who was busy all day about the spacious grounds. To be sure, he had never even spoken to Nanette, but she often peeped between the pillars of the balconies as she cleaned, and watched the tall young fellow trim the rose trees or cut the thick grass upon the terraces.

Nanette had peered through a hole in the palace hedge when she was only a child selling apples in the street. She had seen the sunny haired Orin and fallen in love, and she had straightway found a situation in the palace, not with any hope of winning him, but just to be near. In two years she had accomplished nothing except that the palace corners were very much cleaner.

Nanette thought of all this as the young people trooped past on their way to the Princess. They found Doris languidly feeding sugar to the rainbow tinted birds in her room, and the Countess stated her wish at once.

"Certainly," replied the Princess. "If you desire it, the little maid shall be dismissed. I myself have never noticed her. Speak to the house master about it and do not bother me again."

She turned to the tiny tumbler pigeon upon her finger and caressed it. The callers, somewhat subdued, started for the door, but suddenly the Princess commanded:

"Stay! Let me see this maid who is the cause of your displeasure. I am curious."

Nanette was brought into the boudoir. She looked more forlorn than ever. Her eyes were red and she was trying hard to keep from weeping. The Princess stared at her.

"What are your duties?" she asked. Nanette dried her eyes.

"Your Highness," she said, "I am not of much use, for I only clean the corners and under the rugs, but I love this place." Her lips trembled.

The Princess opened her eyes with surprise.

"You love the palace!" she exclaimed. "And yet you do nothing but sweep and clean. That is indeed a wonder! I had thought of dismissing you. Would you like to stay?"

"Oh, Your Highness, yes!" cried Nanette.

The Princess motioned her disappointed friends from the room and went to a great chest of rosewood and silver.

"Here is a plain white dress of my own. You may wear it so as not to displease the court, though it was indeed a small matter which worried them."

Nanette knelt before her mistress and took the filmy gown.

"I thank you," she murmured. "But it is so fine. I shall make my black dress into an apron to wear over it."

"As you like," answered the Prin-

cess, indifferently. "Now leave me."

After that Nanette went singing about her work. She finished cleaning one great room after another. While the other servants switched feather dusters or mopped the centers of the marble floors, Nanette cleaned behind the great pianos and lifted the rugs. The rooms shone as she left them and moved on down the corridors. When she reached one she had never seen before, Nanette was often tempted to stop and examine the beautiful things, but the sight of the dust always set her to scrubbing harder than ever.

One day, however, as she was cleaning the windows of a room filled with pictured silken tapestries, Nanette chanced to look below. There, standing in the sun, was Orin, pruning a small plum tree. Nanette's heart fluttered. She untied the strings of her black apron.

"I wonder whether he would notice me," she thought breathlessly, and stepped out upon the balcony.

At that moment Orin looked up. The white dress was so fine and dazzling that for a moment he thought it was one of the court ladies and turned his head, but as he did so he caught sight of Nanette's snarl of curls.

"Ah!" said Orin to himself. "It is the little maid I have sometimes seen hurrying about. I wonder whether she does all the work of the palace. How beautifully that white dress becomes her. I had no idea her eyes were so velvety."

He turned and smiled at Nanette. Her face flushed rosy red and she fled back through the window, but all the rest of the day there was a smile about her mouth.

"I shall clean every room in the palace," she thought eagerly. "I shall do everything I can for the Princess. Had it not been for this gown he might never have noticed me."

(To be Continued.)

HINTS FOR HOUSEKEEPERS

Mango Sweet Pickles

Whole green peppers, any amount you like, 3 measures chopped cabbage, 1 measure chopped onions, 2 measures chopped green tomatoes, 1/4 measure chopped red and green peppers. Salt and pepper and ground spices to your taste.

Take any number of green mangos you like. If of the hot variety soak them over night in salt water, cut the stem end off so as to reserve for a cover to each one. Remove the seeds at the same time. Slice some green tomatoes and soak in salt water. In the morning chop or run through the food chopper the tomatoes, onions, a small amount of red peppers and a few green ones and the spices and salt. Mix all together and add enough good vinegar to make moist, sweeten to suit your taste and cook until tender. Fill your whole peppers and fasten the tops on with toothpicks. Then put in a granite pan or kettle—I like a large dishpan best—set in closely but do not pile up, then put enough weak vinegar on them to cook the peppers. Cook until they are tender but not too tender so that they will break or mash in handling. Pack them in jar. Take some good vinegar—to every quart use one cup of sugar and some whole spices (the mixed ones are good)—bring to the boiling point and pour over the peppers. Then put a plate or something on them to weigh them under the vinegar. Be sure there is enough to cover them, then cover tightly and keep in a cool place. These keep all winter and are fine with meat.

I use the term "measure," so you can make any amount you like. I am a subscriber to your paper and will say that we all enjoy reading it and find many helpful suggestions.—Mrs. F. A. Rieman, Fresno.

Add Sugar, Salt and Vinegar to Canned Green Beans

In looking over the California Cultivator, August 14, I see where a subscriber asks for recipe for canning green beans, so I am sending mine, which I have used for three years and have found a simple, quick and easy way. I have never lost a jar of beans canned by this recipe, and others who have tried it like it very much.

To 1/2 gallon fresh string beans add 1/2 cup vinegar, 2 level tablespoons salt, 2 level tablespoons sugar. Add water to cover beans and boil 20 min-

utes after they come to a boil. Seal while hot. In winter I pour off all the water and cook as fresh string beans.

We all enjoy reading the Cultivator each week, and I have received many useful articles from it.—S. G. B.

Good Cake—Graham Bread

I am sending you a cake recipe that I have used for 20 years. It is a "never fail me" sort and makes a good sized loaf.

1 1/2 cups flour, 1/2 cup butter, 1 1/2 cups sugar, 1 cup eggs, 1/2 teaspoon baking powder. Work butter in flour, beat sugar and eggs together with light. Add gradually to flour and butter. Flavor with one teaspoon of lemon and add baking powder. Bake nearly one hour slowly.—A. B. S.

Good graham bread: 2 cups graham flour, 1 1/2 cups white flour, 1/2 cup corn meal, 2 cups sour milk, 1/2 cup sugar, 1 level teaspoon soda, 1 good teaspoon baking powder, 1 teaspoon salt. Prepare by mixing ingredients together and bake in slow oven for about three-fourths of an hour.—A. B. S., Turlock.

Raisin Pie

Beat together one cup sugar and the yolks of three eggs until very light and creamy, add one cup sour cream, one cup seeded raisins, one cup chopped walnuts and a little salt. Mix together. Then fold in the well beaten whites of the three eggs, add one-half teaspoon vanilla and one-half teaspoon lemon extract. Bake with one crust.—Mrs. Erick Johnson, Kingsburg.

Lemon Pie and Eggless Cake

Lemon Pie.—I am sending a lemon pie recipe. We think it the best ever: Three eggs (saving white of one for meringue), one cup sugar, juice of large lemon, one heaping tablespoon flour in large teacup, add just enough cold water to rub smooth, and finish filling cup with boiling water, stirring all the time. Add this to egg, etc., and put in unbaked crust and bake until filling is firm, then cover with meringue made of beaten white of third egg with one tablespoon sugar added. Put in oven and brown.

An eggless cake: One cup sugar, one heaping tablespoon any kind of shortening. Cream with the hands. Add one cup sour milk, six tablespoons cocoa, two cups flour, pinch salt, teaspoon vanilla. Beat hard and bake in loaf.

Frosting: One cup powdered sugar, one tablespoon cold coffee, teaspoon vanilla and just enough milk or cream to work smooth. Beat well and spread on cake. I leave cake in tin and cut as we use it.—Mrs. W. E. Brown, Calipatria.

Candied Figs

Soak four pounds ripe figs in water to cover one-half hour with one tablespoon baking soda, then wash and dry. Make syrup of one cup water, two cups sugar. Put figs carefully in hot syrup and boil slowly for one hour. Let stand over night and boil one hour more, then take figs out with fork and press flat on platter to dry in sun. These are fine.—R. R. Baxter, Los Angeles.

Stewed Okra

Many people use okra only with tomatoes or in chicken "gumbo," but we are very fond of it cooked by itself. Wash pods, cut off stem ends, slice and drop in kettle in a little sizzling fat—butter's best—put cover on kettle and steam on moderate fire as long as you dare, then add a little boiling water, salt to taste and cook till tender, which will take only 10 to 15 minutes if the okra pods are freshly picked.—Subscriber, Los Angeles.

TIMES HAD IMPROVED

William, aged five, had asked his mother for a second piece of pie at dinner.

"When I was your size," said his father reprovingly, "my mother allowed me to have only one piece of pie."

"Say, papa," rejoined the little fellow, "aren't you glad you board with us now?"

Correct lubrication makes a good truck better

You cannot expect maximum performance and long service from your truck unless it is lubricated correctly. Correct Lubrication is a science.

The recommendations of our Board of Lubrication Engineers embodied in the Zerolene Correct Lubrication Chart are designed to better the performance and lengthen the life of trucks, tractors and automobiles. Get a Correct Lubrication Chart from your Zerolene distributor.

TRACTORS: There is a correct grade of Zerolene for each type of tractor.

For Motor Cars
A grade for each type of engine

"Uncle Sam"

"During the year 1919 compiled detailed record of the maintenance expenses of several leading makes of cars. In the case of eighteen Fords the average cost of operation was 7.7 cents per mile. Six Dodge cars showed an average expense of 8.6 cents per mile. Four Buicks gave a rate of 9 cents; two Overlands, 9.6 cents; two Reos, 10 cents; four Studebakers, 10.3 cents, and one Paige, 8 cents. The figures given included the expense of ordinary repairs, tires, gas, oil, etc., but did not include interest, taxes, depreciation or licenses. If, to the above mileage costs, were added the rate per mile for the items of depreciation, license, taxes, insurance and interest (all of which are legitimate items in the maintenance of an automobile) the cost per mile would be increased by at least 2 cents."

The PACIFIC ELECTRIC will carry you daily to and from your work for about 1c per mile, or on your occasional trip for less than 3c per mile. SOME SAVING TO YOU; and not only that, it carries the risk of transportation, not you.

Can You Afford the Additional Cost?

Oranges: Supplies moderate, market strong. Valencia: Packed special brands, 126's, 150's and 176's, 7.75@8.50. Local packed, second grade, 4.00@4.75.

HONEY

U. S. bureau of markets: Movement limited, market unsettled, prices slightly lower account slump sugar market and financial stringency. Carloads f.o.b. usual terms: White Sage Orange, 18½@20. Extra light amber sage, 17½. Light amber sage, 16; light amber alfalfa, 15@17½; Beeswax: 38@44.

BEANS

California Lima Bean Growers, September 3:

The situation has not changed materially during the past few weeks, except that somewhat lower quotations have prevailed apparently due to attempted pressure of selling against depression caused by heavy decline in sugar and coffee. The generally current immediate shipment quotations on regular Limas range around \$10.50 coast, with the market very quiet. Harvesting is now getting nicely under way and the first threshing machines are commencing to move out into the early districts. The yields cannot be determined with any accuracy until threshing has been in progress for a few days so that some averages can be secured.

GRAIN AND FEEDS

Grain Exch. prices bid Sept. 7:

Barley: Carlots, on track, 2.21¼@2.27½.

Bran: Kansas, 51.50.

Milo: 2.75.

Corn: bulk, Yellow, 3.17½.

FAIRBANKS SCALES

The Standard of Weight in Your Neighborhood

WHEN YOU INSTALL a Fairbanks Scale for Wagon and Stock use, you establish the standard of accuracy for your neighborhood.

Why? Because for ninety years Fairbanks Scales have been the world's standard, by which the accuracy of all others is judged.

An enviable record, which is the logical result of painstaking, unswerving accuracy in manufacture. This year's farm profits will come from a close scrutiny of the wastes and "guesses" of the past. The first step in learning your exact profits is to know your weights, and to base your transactions on the knowledge which only a Fairbanks Scale reveals.

BEANS

California Bean Growers Association, August 30: The market on all varieties of California beans remains exceptionally quiet, and prices have declined slightly owing to the lack of demand, and the inability of some dealers to hold their stocks any longer on account of the financial situation. Reports from all the Eastern buying sections are to the effect that their trade will be in the market some time during September, and it is our opinion that we will see higher prices during the months of September and October. Beans are being offered, for shipment, at the following prices: Small Whites, 5.75; Large Whites, 5.75; Pinks, 6.30; Mexican Red, 7.50; Blackeye, 7.25; Red Kidney, 12.50; Bayo, 8.00; Cranberry, 6.75.

GRAIN

Wheat: 3.75@3.90. Oats: Red feed, new crop, 2.50@2.70. Barley: New feed, 2.30@2.60; shipping, 50¢@2.60.

HAY

Alfalfa Growers of California under date of August 25: There were 1,670 tons received in San Francisco the week ending August 21. We are selling hay for approximately as follows: No. 1 Dairy Alfalfa 29.00 Standard Dairy 26.00 Stock Hay 24.00 A. W. Scott quotes: Per Ton Wheat Hay, fancy 26.00@28.00 Wheat Hay (light 5-wire bales) 23.00@25.00 Tame Oat Hay 23.00@25.00 Wild Oat Hay 17.00@19.00 Barley Hay 17.00@20.00 Alfalfa Hay, first cutting 17.00@23.00 Alfalfa Hay, second cutting 21.00@25.00 Under date of Sept. 4, A. W. Scott, Co. says:

Receipts past week, 2256 tons. The prices stand unchanged since last week. The fields are being rapidly cleared and most warehouses through the country are filled with hay stored for farmers' accounts. Storage and carrying charges must soon be reckoned with when these stocks are called upon. Good wheat or tame oat hay will sell at a premium and is in light supply compared with cheaper grades. Alfalfa has been slightly stronger and in better demand with light receipts. A few shipments of alfalfa milled and alfalfa meal have come in from Nevada but the alfalfa weevil has been discovered in several places in Nevada and an embargo is reported to have been placed on both Washoe and White Pine Counties and the possibility of its spreading has caused buyers to shy at all Nevada shipments and concessions in price have been necessary to move them. This has been especially the case in export and coast shipping where there is fear of quarantine. This same thing happened in Idaho last year, and several adjoining states, although they were short of feed, placed an embargo on all shipments out of Idaho. Choice river alfalfa has sold readily at slightly better figures than last week. We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market in San Francisco (for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions).

Citrus Markets

Los Angeles, September 8, 1920.

There has been a slackening in the Eastern market on Valencia due to large receipts of local fruits, to the high prices of Valencia and to the increased freight rate which went into effect August 26. Many buyers had put in heavy orders previous to the advance and it will be some few weeks before the f.o.b. trading comes back to its usual form. Reports on new crop Navels are cutting down earlier estimates somewhat and there is some doubt as to whether the yield will come up to the bumper yield of 1916-17. Central California expects about a 20 per cent increase over last year's output. Survey made on September 1 showed about 2,000 cars of Valencia to be shipped.

The lemon market continues slow. F. o. b. quotations are around 2.75-3.25. A sale of 47,000 boxes of foreign was made in New Orleans last week at an average

of \$2.85. There are on hand 15,000 boxes of foreign.

Shipments

Shipments to date from Southern California since Nov. 1, 1919: Oranges, 28,171 cars; lemons, 7,513; total, 35,684. To same date last season: Oranges, 31,343; lemons, 8,890; total, 40,233. From Central California to date this season: Oranges, 5,375; lemons, 288; total, 5,663. To same date last season: Oranges, 3,714; lemons, 251; total, 3,965. Northern California this season: Oranges, 261; lemons, 23; total, 284. To same date last season: Oranges, 244; lemons, 2; total, 246.

THE POULTRY MARKET

Weekly letter to the poultry producers of Southern California, Inc.:

Last week, after our weekly letter had been printed, Mr. Stanley said to the writer: "I wish you had said a word about the undue importance which many of our shippers, and all outsiders, lay upon the premium over the market which they think they should receive for their eggs, and entirely lose sight of what the 'market' is."

This feature of the situation has been so frequently explained in the past that it seemed self evident that a fair market price was of infinitely greater importance than a few cents premium over a market price below cost of production. In past years, when every individual was seeking to market his own product to the

best advantage, it was a case of the "egg chasing the purchaser," and naturally the purchaser fixed his own figure, which became the so-called "market price," and it was always fixed regardless of the producers' cost of production.

In that case the producer who obtained a premium over the market price seemed to be making good, but very frequently the market price, plus the premium, was below cost of production, and it was just this condition which forced the thoughtful poultryman to seek a means of bettering his position in this respect and has resulted in the cooperative organizations now operating.

In all cooperative marketing efforts the good accomplished by those who join and are loyal to their organization must benefit all in the industry and our own organization cannot expect to be able to monopolize all the improved conditions which we have secured for the poultrymen of Southern California. Every fair minded poultryman must admit that (with the production of eggs in California increasing by leaps and bounds, and far outstripping the increase in consumption) it has only been through the efforts of our cooperative poultry organizations that this year's surplus has been disposed of without demoralization of the local market. Only through the ability of the cooperative organizations to make carload shipments to foreign markets have we been able to move this surplus as we have. The New York City market, which has practically absorbed all of this increase in our production, is a discriminating one and would not have accepted a pack of eggs such as individual poultrymen could supply.

Soil Profits Lie Deep

Deep Plowing Doubles Crop Profits by Reclaiming the Fertility That Has Leached Years into the Sub-soil

McKay Power Lift Disc Plow and Sub-Soiler

America's foremost power lift disc plow makes finely pulverized, extra fertile, moisture-holding, quick seed bed 10 to 15 inches deep. Earlier crops—Heavier yields.

Only power disc plow made with sub-soiler attachment. Sub-soiler is detachable when not wanted.

The McKay pulls easy—to center. Tremendous power and capacity. Easy to handle. Extra high beam clearance. Discs slice without strain. Highest grade material throughout—lifetime endurance. Adaptable to any tractor.

Ask nearest dealer about the McKay or write to us for illustrated description and full information.

FISK

**In selecting a tire for your small car
consider these points of the Fisk Red-Top:**

FIRST: There is no "oversize"—but a tire that is actually bigger than others. Take the most common size: The FISK Red-Top 30 x 3 is larger than the so-called standard oversize tires.

SECOND: Construction strength. An extra ply of fabric is built into the FISK Red-Top. Also the tread is much thicker than in the average tire and is made of the toughest kind of rubber.

Result—both side walls and tread are ready to withstand—and do withstand!—the most severe punishment.

THIRD: Looks—good looks. With its "red-top" this tire is as handsome a tire as you've ever seen. It will add a smart touch to the appearance of your car.

It is no accident that the FISK Red-Top gives such remarkable and uniform performance on small cars. The FISK Red-Top was designed for that purpose. It is a specialized product built to give to the small car owner the greatest ease in riding, the greatest possible mileage—and this with the least attention of any tire made.

Since it was placed on the market a little more than two years ago the FISK Red-Top has leaped into popular favor. Despite constantly increased equipment it is only recently that we have been able to catch up with the demand.

But now you can go to your dealer and get FISK Red-Tops promptly—and after getting them you'll realize what utmost satisfaction in tire value is.

The Fisk ideal guarantees a square deal—"To be the best concern in the world to work for, and the squarest concern in existence to do business with."

Economy

Overland

TRADE MARK REG.

Doing More In Less Time at Less Cost
—*That* Is Economy!

WHEN 97 Overland Sedans under all weather and road conditions, recently averaged 25.2 miles per gallon, they dramatically illustrated Overland economy.

The same nimble stamina with economy won the 1920 Los Angeles-Yosemite contest. *Average 35.1 miles per gallon!* The 355 mile contest included 100 miles of mountain roads. The winner was a stock Overland touring car with standard *Triplex* Springs.

A stock Overland Sedan also won in its class, averaging 27.6 miles per gallon. Of course experts drove these carefully adjusted cars. But normal experience shows *you* can rightly expect great economy in gasoline, and also in tires and upkeep.

Overland economy and stamina is due to the light weight of fine alloy steel, plus the remarkable riding qualities of *Triplex* Springs.

They protect car and passengers from road shocks.

Overland gives you maximum mileage *with comfort*, for every dollar of your investment. You can accomplish more, in less time, at less cost.

National Tractor Show at Verdugo Woodlands

NEXT Monday all roads will lead from the farm to Verdugo Woodlands, Glendale. On that day the National Tractor and Implement Show of the West will open its gates to the public after a preparatory period of three months during which every effort was made by the sponsors of the show to insure its being the greatest exhibition of the sort ever held in the West.

A large attendance is assured, due principally to the desire of progressive agriculturists of the Coast region and the entire West to take advantage of the extraordinary opportunity presented for a first hand study of the latest tractors, trucks and implements, all of which will be represented by interesting exhibits.

The exhibition is also eagerly looked forward to by the tractor, truck and implement men as the greatest get-together meeting in the history of the trade. Practically every well known make of farm equipment will be shown and expert representatives of the various lines will be on hand to conduct practical demonstrations and explain thoroughly the meritorious points of the equipment.

Farmers everywhere are welcoming the chance to attend the exhibition in order to make selection of their needs under the most favorable circumstances. It must be remembered that to see all the models which will be exhibited at the show it will be necessary under ordinary conditions to travel far and wide to the scattered cities where they are represented by sales agents and branch houses. In the Verdugo Woodlands all these will be gathered together so that intelligent comparison will be easy.

Throughout the preparatory period the men engineering the exhibition have devoted their efforts strictly to making a business show, an exposition that will be of immense practical benefit to the busy men who will give up their time to attending it. The carnival side attractions prevalent at state, and county fairs will not be prominent at the tractor show. Every morning the gates will be opened at 8:30 and will close at 6 p. m. This will give the visitors ample opportunity to enjoy the entertainment and recreational features in Los Angeles and vicinity.

The Verdugo Woodlands are reached

by a short, pleasant drive from the heart of Los Angeles over some of the finest paved boulevards in the state, while Pacific Electric cars will run on a speedy schedule from downtown Los Angeles to the gates of the park. Main roads leading to the Verdugo Woodlands are: From Los Angeles, North Broadway to Glendale and the Verdugo Road; from Monrovia, Sierra Madre and Pasadena, the Foothill Boulevard and Eagle Rock Road, turning into the Verdugo Road at Glendale, also the north road by way of Devil's Gate to the junction with the Verdugo Road; from San Fernando Valley points via the San Fernando Boulevard to Glendale; the Sunset Boulevard, Vermont Avenue and the Los Feliz Road from Hollywood and Coast points.

For many days active preparations for the show have gone forward. Every exhibitor has selected his space in the beautiful woodlands and rivalry is keen among the dealers, manufacturers and others to have the honor of the best exhibit. The finest examples of every article listed will be there, groomed for their appearance before the thousands of persons who have a vital interest in the progress of modern agriculture.

Many notables in the field of agriculture and the manufacture of agricultural equipment will be present at the show, while consuls, consular agents and exporters stationed in Los Angeles and San Francisco will probably be among the most interested visitors.

Careful selection of the implement to meet his needs is a marked characteristic of the experienced agriculturist. Snap judgment is seldom a fault of these buyers, and here at the National Tractor and Implement Show he will be given fullest opportunity to inspect, compare and weigh the respective merits of equipment of various makes. Visitors will be surprised at the wonderful showing of tractors, today an all important moving force in farming. Horse drawn vehicles retain their immense popularity and undoubted importance in the agricultural scheme of things, but happily for the horse and his owner, the perfected tractors of today are doing the greater part of the heavy, intensive work.

Years ago, when the tractor first loomed on the horizon with just a

faint glimmer of its popularity-to-be and its all around usefulness, its coming was generally regarded as the big step in farming on an immense scale, where broad acres comprise an estate the size of a township, where the work calls for the untiring endurance of engines of steel. With the passing of the years, however, the inventive geniuses who developed the tractor sensed the need for equipment on smaller farms, until today visitors to the show will have an opportunity to inspect at close range the small, almost tiny, tractors intended for use in the little truck garden, the backyard orchard, on any of the gem like estates with which California is dotted. These may be compared with huge tractors almost as large as locomotives.

Tractors, while the largest single group of exhibits at the show, will be run a close race by trucks and implements. These will not only include major exhibits of trucks for farm use, shown in all popular and needed capacities, but also trailers, those smaller supplementary vehicles which have lately become so popular in agriculture and industry. Implements will range from the better known models of horse drawn cultivators, plows, harrows, etc., to the motor driven implements, threshers and separators, with all their most approved attachments, intended to lighten the labor on the farm and speed production.

The large selection devoted to accessories will prove absorbingly interesting to all visitors. There will be motor fittings of all sorts, lubricants, paints and many other items, almost too numerous to mention, but every one of great value to modern agriculture.

NOTES

The spirit of the West is in every plan for the coming tractor and implement show. Greater economy, efficiency and accomplishment are made possible by improved equipment. True, its use calls for large capital, which is unfortunate for the man with limited means, and he is at a certain disadvantage. But the world moves and agriculture has seen such an advance in the past score of years that the real necessity for striking the gasoline or electric gait is not fully appreciated by the slow thinker.

Agricultural News Notes of the Pacific Coast

Northern California

Caretakers who go with stock to the fair are again allowed to travel free.

Petaluma's celebration of Egg Day brought great crowds to the city.

Pear growers of Lake County are receiving as high as \$100 per ton.

A grape grower near Oroville reports receiving \$100 a ton for his entire crop.

The Ukiah Valley pear crop is estimated at 900 tons as against 1,500 last season.

Placer County fruit growers have been investigating dehydration and evaporation.

Tomato fields along the Russian River are now yielding exceptionally heavy crops.

Red spider has caused serious injury to the prune orchards of the Sacramento Valley.

President Stephens of the Pacific Rice Growers has advised against growers contracting futures.

The Sutter Basin Land Company gave away about 50 carloads of watermelons because of poor market.

The Mendocino Apple Show will be held October 27 to 30. A stock exhibit will be one of the main features this year.

Meridian, Sutter County, has requested supervisors to pave three miles of highway south of Long Bridge.

The board of supervisors of San Francisco is considering the question of allowing goats to be kept within the city limits.

Electric advertising signs in the entire Bay district will be extinguished until further orders to conserve power for growing crops.

Fruit shipments for Northern California are 2,000 cars in excess of last year's at this date. So far pears are the heaviest shipper.

Butte County's rice crop will be harvested three weeks in advance of the 1919 crop. Contrary to earlier estimates, the crop will be heavy.

Tehama County farm bureau held picnic on Labor Day at Courtland Park. President Walker of the state farm bureau was one of the speakers.

Those who favored the building of a bridge over the Feather River at Oroville have drafted a new set of plans calling for smaller expenditure than the original plan.

Only one Japanese, a servant, is found in Lake County as yet. The farmers are having no trouble in getting their crops harvested. Some one ought to tell Colonel Irish about that.

The Colusa office of the Pacific Rice Growers Association has increased its staff by the addition of four members, and this will now be headquarters of the membership department for the state.

Under order of the court in an injunction suit brought by the Moulton Irrigated Lands Company, rice growers are restricted in amount of water which they may drain from their fields into Butte Creek.

The first annual Durham Community Fair the last week in August was a big success. Many visitors came from all parts of the state because of their interest in this first land colony established in California.

Central California

The former winery at Lodi will crush 250 tons of grapes daily this season.

Fresno County finds it necessary to increase the size of its fair grounds.

Potato growers of the valley declare this an exceptionally bad year for spuds.

Fig growers of the Terra Bella district of Tulare County report big crops.

Ninety dollars a ton is reported for Bellflowers grown on the Kaweah River.

Buckeye poisoning of bees is reported by a beekeeper at Woodlake, Tulare County.

Half the population of Kings County is in the township in which Hanford is located.

Fresno district fair, to be held September 27 to October 2, offers a \$20,000 premium list.

Some damage was done to White Adriatic figs in Madera County by rain-fall in August.

September 7 was San Joaquin Day at the state fair. Thousands of valley people attended.

The Stanislaus County board of supervisors places in its budget \$10,000 for fair grounds.

Fresno County poultrymen are planning a big exhibit at the Fresno County fair, September 27 to October 2.

Survey is being made of the Kern River irrigation project. Report will be made by the first of the year.

Fred W. Hansen has tendered his resignation as general manager of the San Joaquin Valley Milk Producers.

Young almond orchards now coming into bearing in the Terra Bella district of Tulare County show heavy yield.

The first week in September serious forest fires raged in the Tule River Indian Reservation east of Porterville.

Work has begun on the new citrus packing house of the Grand View Heights Association near Terra Bella.

Many thefts of bee hives are reported in Monterey County with incident destruction of hives which are not taken.

Fresno County supervisors have called for bids for construction of 31 miles of highway to connect present units with state and main highways.

Hog auctions held by the Stanislaus County farm bureau since March, 1919, have disposed of 116 carloads of hogs and brought to their owners \$262,064.

The grain raising districts between Hickman and Farmington, Stanislaus County, report harvest of more than 250,000 sacks, 180,000 of which is barley.

A melon shipper at Turlock has a new method for preserving shipments of melons to Eastern points. He sprays them with sulphuric acid solution.

The Monterey Cannery Association has agreed on a new maximum wage schedule: 40 cents an hour for women; 50 cents for general unskilled labor.

The Valley Fruit Growers Association has launched a drive for funds. This association has been for four years supplying labor to its members in Madera, Fresno, Tulare and Kings Counties.

Southern California

A cotton gin at Calexico was destroyed by fire last week.

Arlington, Riverside County, canneries have opened on tomatoes.

Los Angeles County has purchased \$500,000 worth of highway bonds.

Los Angeles County's coming orange crop is estimated at 6,650,000 boxes.

Almond growers at Banning are busy with their soft shell varieties.

Hemet canneries are having extra heavy run on Muir and Lovell peaches.

J. R. Waters has been appointed assistant farm adviser for Orange County.

Prune growers in the Banning district of Riverside County have begun harvesting.

Several boys and girls pig and vegetable clubs will be started in Orange County this fall.

The price of ginning cotton at Calexico has taken a drop from 50 cents per 100 pounds to 35.

Orange County fair, Huntington Beach, October 7-9. \$50 is offered for best community display.

A fee of \$2 will be charged for each correspondence course taken under the direction of the state university.

Banning almond growers have received their first payment from the association for I. X. L. and Nonpareil.

Good alfalfa is in keen demand; grain hay rather lighter crop than anticipated because of great production of grain.

Lemon prices are looking up a bit, but the past 12 months have been about the bluest the lemon growers ever faced.

There is a movement to organize a Lima bean pool among independent growers on the San Joaquin Ranch in Orange County.

There are something like 1,500 cars of Valencias yet to be shipped; last year there were nearly 6,000 cars to go after this date.

Cotton gins of Imperial Valley are having exceedingly heavy run. The weather is exceptionally good for developing the cotton.

Orange County farm bureau members recently made cover crop excursion. Whippoorwill cow peas are the favorite for summer cover.

The Fullerton farm center of Orange County held its first fall meeting September 10. Standardization of barnyard fertilizers was discussed.

The Mesquite Lake, Imperial County, farm home department will meet September 22. Another meeting will be held west of Calipatria, September 23.

The increase in freight rates means an additional cost to citrus growers of California of \$8,600,000. This will amount to about 50 cents for each 100 pounds, practically 40 cents per box.

Warning against invasion of Japanese in sugar beet growing districts of California is contained in report to Secretary of Labor Wilson by two agents appointed to make survey of contract labor.

Anaheim packing house is starting on the canning of chili peppers. There are about 300 employees and the plant will run for about four months. The output this season will be about 25 per cent greater than any preceding.

The Coast and General

The last day of the Arizona state fair, November 13, will be Auto Day.

It is rumored that the new administration in Lower California will remove export taxes from cotton.

Pear growers of the Wenatchee district of Washington estimate shipments will be between 600 and 800 carloads.

Cotton growers feel determined to hold on to their crop until "manipulators get tired of trying to hold down the prices."

Arizona state fair will be held at Phoenix, November 8 to 13. Horse racing will be featured. A purse of \$20,000 will be distributed.

The Washington State Good Roads Association held convention at Everett the last week in August. Tacoma was chosen for the 1921 convention.

President Wilson has urged governors of all the states to set aside Saturday, October 9, as fire prevention day and request general observance by the public.

The army transport corps is expected to reach Phoenix, Arizona, September 20. This convoy of trucks and cars left Washington on June 14 and will end its trip in Los Angeles.

The Yuma Water Users Association has appealed from the decision of the U. S. district court that it must pay the reclamation service \$5,000,000. The association claims its share is \$2,000,000.

In spite of a rather low rainfall over a considerable area of Arizona range feed is reported to be fairly good. In several parts of the state cattle are reported to be "rolling fat." In spite of the dry summer cattle have come through in excellent shape.

The Yuma Cotton Growers Association is conducting a membership campaign. The principal business of the association at present is securing and handling cotton pickers from Mexico. Growers secure their pickers from concentration camps in the valley.

It is reported that a bunch of 3,500 Mexican soldiers being brought to Mexicali from Central Mexico will arrive in uniform of blue denim overalls, all clothing and bedding having been burnt to insure against any possibility of introducing the boll weevil into the Imperial Valley.

Figures recently given show that the mineral products of Arizona for last year were valued at \$108,707,000. This is only about twice the value of the farm products. If the area irrigated land in Arizona should be doubled agriculture might soon become the leading industry.

At a meeting of the Chandler, Arizona, farm bureau, held recently, resolution was adopted asking the merchants and others not to buy cotton from individuals unless the buyer is sure that the seller is a grower of cotton. This step was taken to prevent cotton stealing, which was prevalent last season.

Cotton growers throughout the San River Valley of Arizona are very much concerned about the opening price for cotton. While a few bales have been sold at 85 cents there is considerable doubt as to whether this price will establish a market. The low price of cotton seed is also somewhat discouraging to the cotton growers.

California Agriculture Represented at State Fair

By C. B. Messenger

UT in front of the grandstand in the aviation field, as the center of the race track was called, was the big sign: "See the Fair from the Air." The literal seeing the fair from the air cost ten bones, and that meant that ten perfectly good dollars was burned up in as many minutes, which was the time allotted for seeing the fair from the air. I didn't see it that way; I prefer walking. A person ordinarily walks considerably less than 100 miles a day when he is attending the state fair but—take it as a reasonably conservative statement—one is dead tired at night. And that is my text for a sermon, or a bit of moralizing, or, if you prefer, advice, to those who are going to other fairs this year. Don't tramp so far and see so much that the whole impression secured becomes a confused mass of, well, junk, for the want of a better word, and of little value.

Almost every exhibit had from one to possibly a dozen attendants ready to explain and give real information to the inquirer. For instance, the exhibit of the state department of agriculture. There were 100 or possibly 1,000 different educational exhibits in this one. There was a bulged and partially decayed cheese; there were portions of the anatomy of cows and hogs; there were appliances used in dairy or creamery; there was a display of chemicals, retorts, flasks and other equipment of the laboratory; there was a model of a monster ship; there were commercial packages of fruit of such quality as to be almost repulsive; there were others magnificently packed of highest quality; there was even a place to sit down and rest. I sat there a few minutes and observed the casual passer by. As a rule he asked no questions, simply gazed and perhaps within five minutes had passed the entire exhibit.

There were others who spent perhaps an hour and became almost a bore to the attendants, always patient, however, and giving a fund of information regarding that one exhibit.

That faulty cheese I spoke of was simply a horrible example. It had been made in the regular way; it should have been a perfect product, but because of carelessness in the dairy an inferior quality of milk resulted in inferior cheese. This particular exhibit, which was under the direction of C. F. Hoyt, contained, if not a complete, a most extended, exhibit of milk and milk products. In cheeses there were cheddars, limburger, pineapple, Edam, Camembert, Neufchatel, and still more.

Other products of milk, all California made, were albumen, milk sugar, dried milk, condensed milk, evaporated milk and a large number of medicinal and other products made directly from the albumen and milk sugar.

But, like the bore referred to, we are staying too long in Mr. Hoyt's booth.

Prof. Gray amused and instructed the kiddies as they came along with his flasks of crimson and golden liquid. Several ounces of the crimson or bright pink liquid was deprived of its brilliant color and became as clear as water on the addition of two or possibly three drops of an acid. This made the kiddies' eyes stick out, and then Prof. Gray would add a few drops of alkali and the brilliant color returned. This led on to the explanation

as to how the chemistry bureau of the state department of agriculture may determine the quality of fertilizers, also the scope of the work conducted by this division.

The work of the office of cattle protection, the use and recording of brands, was explained by J. B. Newsom and other investigators and specialists.

The model of the big ocean liner in the great glass case was merely to visualize the work of the quarantine service. Frederick Maskew is chief deputy quarantine officer, but L. A. Strong was at hand to give information of the intricacies of the work and to explain a vast number of the ins and outs of the work of quarantine officers and inspectors.

Harry Smith's bugs filled a large glass case. They were mostly of the Hippodamia, or aphid eaters.

Potato Inspector W. V. Shear showed potato seed, good, bad and indifferent.

F. W. Read, in charge of standardization service, with assistants, explained the methods followed by some shippers who would injure California's reputation for high grade fruits by dishonest pack.

R. L. Nougaret's viticultural service attracted much interest, notwithstanding today viticulture is on a different basis than formerly.

We are, however, spending more time than we should in this one most interesting department. Going down the great building from this southern end where the department was located to the northern end, where the fish commission maintained its exhibit, one passed some two or three score of exhibits made by counties, the federal government, or large cooperative organizations. A like number of exhibits was also made in the wide balconies. There is hardly room for even a list of these exhibits, but they contained displays of California fruits in almost every form. That is hardly correct, however, for there was one form of exhibit, common in former years, which we believe did not exist in this year's state fair. This, so necessary in a permanent exhibit, is the monster globe or glass jar containing fruit and formaldehyde or other preservative of form and color. The fruits at the fair were all in their natural state or preserved by evaporation, canning or otherwise, and for human food.

This great fireproof building is a credit to the state. It is only three years since its predecessor and its contents, of great value, went up in smoke. On Sunday evening of that year the throngs were admiring the varied and rich exhibits, similar to those displayed this year. The building was of such a nature that there was barely time to move the crowds from it before it was a roaring furnace. The loss seemed irreparable, and was, as to some of the most valuable exhibits. The new building, however, answers the purpose admirably and fits into the general plan which architects have outlined for all the buildings yet to be erected for a permanent exposition of the state's resources.

Tractors and Implements

To give a complete list of the tractors, harvesters, trucks, implements and machines would require a good full page of small type, hence we refrain and will take a look in at the

Things Were Moving at the State Fair.

Upper picture shows entrance to Tractor and Farm Power section. It was taken early in the morning before the crowds gathered.

The second is of the interior of the Tractor and Implement tent. It is a snapshot taken by the Cultivator camera and indicates something of the magnitude of the exhibit. There were too many individual exhibits to make possible showing them in separate photographs.

Second from the bottom, electric light plants for the farm, methods of generating, storage batteries and electric equipment generally; likewise many small motors and labor saving appliances.

Bottom picture shows exterior of the three buildings occupied by the University of California.

Stroke, $8\frac{1}{2}$ Inches

Bore, $6\frac{1}{2}$ Inches

Compare these with stroke and bore of the most powerful truck engines

Gas engine power is indicated by bore and stroke. In the Best Tracklayer engine, bore and stroke are fully 50 per cent greater than those of the most powerful motor truck engine.

The Best is built for power. The engine is manufactured in our own plant to exactly suit Best Tracklayer design. Power galore for the toughest job of plowing, harvesting or hauling with ample reserve for the unexpected, the Best has proved itself a marvel for heavy-duty work. This tireless, unfailing "pull" starts with the engine. But Best Tracklayer design gets the power to the drawbar with least loss. Best Tracklayer turns 60 per cent of its engine power into pull. This is the result of long years of tractor-building experience.

Best Tracklayer reputation for dependability, long life and low operating cost is due not only to its remarkable engine, but to other famous features, such as manganese steel track, with greaseless, non-friction "rocker-joints"—three-point suspension—working parts housed—no belts or chains—36 Hyatt and Timken bearings—full oscillation and independently operated tracks—correct design worked out through years of experience—scientific selection of materials—high grade workmanship. If interested in tractors, send for our complete catalog.

C. L. Best Gas Traction Co.

SAN LEANDRO

CALIFORNIA

BEST TRACKLAYER SIXTY

60 H. P. at Pulley

35 H. P. at Drawbar

half dozen great tents and exhibit booths much as did many of the visitors. The real value came to the visitor who lingered, that is, providing he lingered at the particular station which would give him information. This might be had at every one of the exhibits in its particular line.

For instance, the demonstration tent, located between the tent with farm trucks and the one filled with pumping plants and other power appliances. This little demonstration tent had, when in full operation, perhaps a dozen instructors in farm mechanics. Prof. Fletcher was in charge, and the inquirer who had a problem or wished information along any mechanical line, presenting his case to Prof. Fletcher, would be assigned to the station which was equipped to solve the problem. Did one wish to know how to handle difficulties with the magneto, one thoroughly qualified stood ready to explain the workings of the various parts and their relationship to each other, to tear down and build up and show methods of repair.

I wished to know regarding the differential. One was there already on the work bench, and it was taken entirely apart, every cog wheel separated from every other. As it was torn down and built up again it was made perfectly plain how the two rear wheels of an auto or of a tractor may run at different speeds in making a turn and still both wheels receive the same amount of power from the engine.

Another booth showed how to lace belt, not the waist kind, but the kind which conveys power. Metal connections, or laces, were shown and also faulty method of using and how to avoid it; also how to avoid the fuzzy end of the ordinary soft rawhide links. This fuzzy end was trimmed slightly, held over a match until charred to just the right consistency, allowed to cool, thus hardening, in three or four minutes, and so hardened as to become almost a perfect needle which could be sent through a much smaller hole than is possible with the soft oily rawhide.

But we must be careful or we will spend too much time in this wonderfully attractive tent, attractive because of its wonderful educational value.

Pumps

Just back of this were the pumps, and by pumps we mean irrigation pumps, hand pumps, spray pumps, oil pumps and even air pumps. Concrete canal filled with water gave opportunity for big irrigation pumps which supplied water for miniature irrigation system, waterfalls and measuring devices.

Threshers

Back of all the tents in the open field were the threshers, also combined harvesters and threshers. Many of these were in operation, and when they were all going and began to speak for themselves the hum of industry was thrilling. This all became pandemonium turned loose, however, when one of the threshers proceeded to devour a pile of brick. This was a rather startling exhibition of endurance run. This particular thresher was connected with the engines of a monster tractor and was going at full speed. The attendant would carelessly toss into the carrier or into the cylinder two or three or half a dozen full sized brick. The logical result should have been a mixture of brickbats and broken cylinder teeth. However, the thresher seemed to enjoy the diet, and with a roar which drowned all other noises the bricks, or rather the dust of what once were bricks, was carried through and ultimately enveloped the entire outfit in a mass of red dust.

Trucks

The truck tent was a monster one but not so filled as was the tractor tent, in fact, some of the trucks were exhibited in the bigger tent which housed the tractors and implements. But there were trucks and trailers for almost every conceivable use, whether it be hauling rocks or gravel, grain or hay, cattle or pigs.

Dairy Supplies

There wasn't a milking machine on the fair grounds. This was quite a distinct shock, because there always have been a number, and in the past year there has been wonderful advancement in the milking machine industry. These machines have always been exhibited near the dairy building in the Holstein dairy barn. That particular space was given this year to milk goats, so the management asked the dairy supply people, including the manufacturers of milking machines, to exhibit near the farm implement and power tents. This they declined to do, hence dairy equipment had less liberal display than at many of the preceding fairs.

This is one of the very few instances where there was any shrinkage or even anything other than wonderful advancement over former years' exhibits. So far as space was concerned, the location intended for dairy supplies was taken up by electrical lighting appliances, especially for manufacturing and using electricity on the farm. Equipment was shown which might be installed on any farm to generate the electricity, store it, distribute it and use it in running the washing machine, the sewing machine, the churn, the electric fan in the kitchen, the electric toaster on the table, the dish washer, to lift the water and make it run through the house; in fact, create in the farm home and its outbuildings all the conditions which make for modern conveniences.

Of course these hardly reached the magnitude of the monster war department searchlight which was exhibited in front of the main building. This great searchlight, mounted on its four wheels, was run on a track up into the army transport where was located the monster dynamo which supplied the current to the searchlight, which gave forth a light of 84,000,000 candlepower (that is 84 million—there is no surplus of ciphers for good measure).

But while not of such magnitude this electrical showing convinced me that there is a world of help in such exhibits in suggesting relief from at least a portion of the labor troubles on the farm. Other fairs are coming yet this fall and we hope that every producer who would be efficiently equipped will look up these exhibits and ask the men who know what they can do, how they do it and how much they will cost and save.

The Big Tent

But there is the big tent. I haven't taken you in that yet, although it is the most prominent place and filled as I have never seen it at any other exposition or fair. The casual visitor could perhaps walk its length and back in 30 or 40 minutes, but the inquirer would want at least as many days. The question which brought a world of information was: "What have you new, that is, invented or manufactured for the first time during the past 12 months?" This aroused much interest among the attendants or salesmen who were with the exhibits. One would say, "Here it is, a power lift of such economy of construction and efficiency in service that it should be in the hands of every user of plow, cultivator, scraper or other implement on which a power lift can be used."

At the next booth, perhaps, was a cutter bar, or a whole mowing machine for attaching directly to the front of a tractor. This appliance was so wonderfully simple that one couldn't refrain from saying, "Why didn't I think of that before?"

Then there were new tractors, in fact, entirely new types of tractors, which was a bit surprising, for it had been felt that in the main there were now only two or three different general forms or principles on which tractors are to be built. In fact, the effort has been toward standardization rather than toward developing diverse types.

Subsoilers are also supposed to be standardized, but there were new attachments, the like of which have not been shown before.

In this tent, besides the tractors, trucks—for garden and all the way up to the great 75's, trailers, there were mowers for lawn and field, binders, ensilage cutters, scrapers, graders, potato diggers, drills, cultivators—everything used on the farm.

THE POSSESSION OF A YUBA
IS ASSURANCE OF A CROP

A NEW YUBA

Inventors created the first Yuba—our engineers developed the second—but YUBA OWNERS have perfected the third. This Model 15-25 is the first new Yuba in four years. It is the same sturdy BALL TREAD, with an hereditary eagerness for difficult work, fashioned to the whims of the man who sits at the throttle for long dusty hours.

“Think of the man at the crank on a cold morning!” cautioned one Yuba farmer.

An impulse magneto insures easy starting.

“Have to get off the seat to open and close the petcocks on the track oiler,” complained another. “Why do n’t you put your oil reservoir in the transmission case with a handy master control cock?”

We have simplified the track oiling to the last degree.

“No track bolts to tighten? That’s my idea of heaven!” declared a five-year Yuba customer.

No, the link, track angles, and track plate form an integral manganese link. The tread shoes or grouzers are riveted on.

“Does n’t mark even hot asphalt,” declared another Yuba owner. “But just on account of these tread bolts the road supervisors look at it suspiciously.”

There are no track bolts in the Model 15-25.

“Some day you fellows will put a double clutch transmission in the smaller rig!” prophesied one operator.

We have! Independent track control, one tread reverses while the other drives ahead! The same as in the transmission of the 20-35 Oversize Yuba!

“And put a glass container on the dust catcher so I can see when it needs emptying,” said the same man.

A glance shows when the new Donaldson Air Cleaner needs attention.

“House-in that track drive,” said another.
The drive gear is protected from dust and dirt.

“If you want to please ME,” grinned one friend, “you’ll make it possible to change gears without getting out of the seat.”

The new gear shift control will suit even a lazy man.

“Your engineer never sat in THAT seat for a 10-hour shift!” declared one Yuba owner.

The new seat has a back and a safety support.

Unhampered by false standards of economy, our engineers have been free to use the finest materials and plenty of them. They have sought and weighed suggestions from Yuba owners, salesmen, and service men.

And it rather pleases us that there were no radical changes to be made—that most improvements were for “driving comfort.”

A postcard brings word of price, delivery and full specifications of this new Model 15-25.

Yuba Manufacturing Company

433 California Street, San Francisco, Cal.

Factories at Benicia and Marysville, Cal.

This machine will be on display at the National Tractor and Implement Show of the West

NOTES

Hundreds were carrying around dolls with "real hair" and in a state of more or less undress. These dolls could be bought "for only a dime," according to the spielers who were running the gambling joints. Thousands of kiddies got a good start in the gambling game.

The biggest market basket in the world was shown in the Sonoma County exhibit. It was some eight or ten feet long, perhaps six feet wide and the handle standing perhaps that high from the bottom of the basket. It was filled with Sonoma County eggs. That basket, by the way, represents some \$15,000,000 worth of eggs annually.

There were some slight deficiencies in the exhibits. For instance, as one of the greatest apple growing states of the Union there should have been a far more extensive and better quality apple exhibit. We were reminded of the time when one little community, Watsonville, held an apple show which contained a dozen or more carloads of apples displayed in all imaginable ways. We think one husky six foot man could have carried all the apples exhibited at the state fair if they had been placed in two large baskets.

Another deficiency was in cotton. Kern made an attractive exhibit in which cotton was one of the principal features, but with the vast quantity of the finest cotton on earth raised in California, why not more at the state fair?

Yolo and Sacramento Counties made fine exhibits, but were not competing for any of the money. Yolo has heretofore competed, but this year she determined to join her sister county, Sacramento, in acting as hostess.

When the citrus industry is considered in the light of the fact that it brought to the state last year in excess of \$80,000,000, there should have been a greater quantity of citrus fruit. A remarkably fine display was made by Los Angeles County. That county had even kept in cold storage Washington Navels nearly four months past their season. Her display of Valencias and of lemons showed high quality fruit.

The 6,500 members of the California Peach Growers, Inc., made fine display of package goods.

"Practically Peeled" made remarkably fine appearing 25 pound surfaced goods.

The greatest number of people represented in any one exhibit was perhaps in that of the California Associated Raisin Company. 10,500 members were represented in its exceptionally fine exhibit.

The Del Monte people made fine exhibit of California canned fruits, displaying liberally the slogan, "A California Contribution to the National Market Basket."

Northern California Milk Products Association made friends for itself and for the dairy industry by serving various milk products, especially buttermilk.

One Japanese silk culturist made large display of cocoons and manufactured silks and explained possibilities of California in sericulture.

The weather was cool during the entire fair week, in fact, there was in the great new agricultural building Drifted Snow—Sperry's.

One little girl remarked, as she looked in the big glass aquarium of the state fish commission: "Daddy, did they paint those beautiful red spots on those golden fish?"

That fish commission exhibit, by the way, was a wonder. There was a large pool with the wonderfully attractive background of the Sierra Nevada, snow clad peaks, waterfalls, pine trees, both real and painted, and the pool filled with hundreds of golden, speckled and rainbow trout. The crush to see was evident nowhere else to the extent that it was along the rail in front of this exhibit.

San Luis Obispo County made one of the best exhibits of evaporated or dehydrated fruits on the ground.

Mendocino's exhibit of cheese showed that her resources are not confined to redwoods and apples. She also had a fine exhibit of wool.

Santa Cruz County featured the egg laying contest.

Lassen, Modoc, Siskiyou, Shasta and Trinity united in keeping open house in a quaint shake covered structure. Minerals were exhibited freely, but the greater portion of the house was filled with agricultural products. One feature of this exhibit was a silver cup surrounded by canned fruits, the work of a 12 year old Shasta County canning club girl.

Not so with Calaveras County. Her greater exhibit was of minerals and it was wonderfully attractive.

Tehama County with its wistaria trimmings devoted much space to the Iron Canyon project.

A striking feature of Monterey's exhibit was the display of grains.

Earle Mills presided over Butte County's peaches. Some peaches! He was assisted by Mr. Burkett, who insisted that Paradise Valley pears and apples were the equal of any in the world.

Alameda County's exhibit was diverse, and yet the greater portion of the display space was taken up by the great California Nursery exhibit.

The forestry division of the U. S. department of agriculture taught method of handling camp fires in the mountains and fire protection through a wonderfully life like camping scene.

Fresno's peaches and raisins, figs and olives, orchard and field products were gathered together with remarkable taste in their display.

Next was San Joaquin with its almonds and grapes, seeds and general agricultural products.

Barley was the motif in the Placer County exhibit, but underneath the booth, which was largely made of barley sheaves, was a display of fruits showing wonderfully diverse production.

One of the most expensive and attractive feature displays was that of the California Almond Growers. The Blue Diamond brand of almonds was featured in every conceivable form. The attractiveness and magnitude of this exhibit gave quick vision of the worth of this industry to California. The exhibit contained some of the finest quality of almonds, we believe, ever brought together.

Adjoining the almonds was the Kings County exhibit. Its hangings of tiny ribbon gave an effect as dainty as a girl in a new pink dress. However, its exhibit was not all in dainty (Continued on Page 370.)

HEADLIGHT OVERALLS

UNION MADE

OUTWEAR TWO ORDINARY PAIR

Guaranteed to Wear Twice as Long

as ordinary overalls. Remember, when you price overalls, that the guaranteed double service of Headlights really cuts their selling price in two. Also, they are unusually comfortable, due to the extra yardage of denim that goes into their manufacture.

If Headlights don't last you twice as long as ordinary overalls, and afford greater comfort in the wearing, you get your money back.

“There’s the Wallis”

A center of great interest at the show will be the Wallis, AMERICA'S FOREMOST TRACTOR. Fresh from another year of splendid performance on the farms of the West and Middle West, the Wallis comes to the California Show with a convincing record of performance.

The Wallis has proved itself the tractor of the future as well as of the present. It has more drawbar horsepower per hundred pounds of weight than any other tractor on the market! It is the only tractor with the famous U-shaped frame that has revolutionized tractor

design. The U-shaped frame, together with the cut and hardened steel gears, enclosed construction, sturdy, heavy duty engine, and many other features, have made it AMERICA'S FOREMOST TRACTOR.

The Wallis has come to California to stay. The California branch is organized to serve the special need of California farmers. We invite you to ask members of this branch to show you why Wallis power means more acres per hour, whatever the field operation.

See the Wallis — talk with Wallis owners — and visit our branch.

The TORO

Way of Motorizing the Farm

TO-RO Cultivator

The TORO is the final achievement in useful, adaptable farm power equipment that makes the motorization of the farm complete. It is two standard machines in one—an efficient two-row cultivator and a dependable tractor. Each operates independently of the other and the dual equipment does the work of from two to four horses.

Readily Changed

—from Cultivator to Tractor
—from Tractor to Cultivator

Use as a tractor to pull two 10 or 12 inch plows and to prepare ground for seeding and plant seed. Then use as a cultivator until harvest season and change back into a tractor for fall plowing, hauling, belt work, etc. The conversion is as simple as changing a tire on your car.

Call and See It

We will gladly explain its operation in every particular.

Fighting Argentine Ants in San Bernardino

The meeting at the Grand Terrace school house on September 9 to inaugurate a drive to exterminate the Argentine ant was well attended and we hope will result in good to the community.

About 100 people took supper and nearly twice that number attended the speaking later in the evening. Mr. Borden of the U. S. department of agriculture gave us his experience in the Upland district and emphasized the need of thorough work in the handling of the pest and the slight expense of getting rid of the ants as compared with fumigation to get rid of the soft brown scale and mealybug. Mr. Cummings of the Highgrove Fruit Exchange gave facts and figures to show the difference in returns from groves lying adjacent, one being well taken care of and the other lousy with scale; also the difference between property of absentee owners and that whose owners were on the job all the time.

Harry Chase of the National Orange Company gave results accomplished by that company from the use of ant poison in getting rid of the Argentine ants on about 400 acres of citrus fruit and advocated hiring persons to place the cans on the trees to be sure it

was done well. Prof. Vaile of the Riverside citrus experiment station spoke of the necessity of cooperation in the work, as it was discouraging for a farmer to clean up while his neighbor kept a hatchery to raise a new batch. County Horticultural Commissioner Coy spoke of the law and promised that if a large per cent of the farmers cleaned up he would see to it that the rest followed their lead.

The committee had secured very favorable figures on the prepared poison and subscriptions were taken for the material to do the work.

The next morning at a meeting of the executive committee it was decided to thoroughly inspect the groves in the community, regardless of county lines, and arrange to have the work of putting up the poison begun early in October, as that seemed to be the favorable time for best results.

W. J. Van Petten of Grand Terrace was given charge of the work and he has districted the territory to be covered and will appoint an assistant for each district, who will thoroughly inspect the land in his territory and report per cent of infestation, number of cans required and secure the cooperation of the owner in the work.—An Interested Owner.

Notes From the Tractor Show

Manager Guy Hall reports the number of exhibitors will materially exceed a hundred. The number of exhibits it is impossible to predict, but one exhibitor will have six different lines of manufactures and the number of his exhibits will exceed 75.

B. Hayman, with a long line of exhibits will give to inquirers unusual opportunity to gather a fund of information. In the first place the company will have implements from several large manufacturers, and each of these manufacturers will be represented by at least one from the factory. The Roderick Lean Manufacturing Company's representatives will be P. A. Eikers and Mr. Jensen. The S. L. Allen Company will be represented by W. D. Collins; Emerson-Brantingham Company by J. R. Card; Light Draft Harrow Company by P. F. Arney; Smith & Son by either Ed Smith or Mr. Hutchinson.

The A. F. George Company will make a showing of that old standby, Yuba tractor, and the Rex concrete mixer.

The C. S. Anthony Company and Robert H. Green, coast distributor of Monarch tractors, will have on exhibit a new model of the Monarch tractor. This new model has all of the working parts made of manganese steel, in fact, it is an all steel machine, built to wear forever and a day.

The W. L. Cleveland Company will exhibit the new Kardell 10-20 and 12-25. The Kardell is equipped with a

new Midwest motor. Roy Cleveland says it is in the 100 per cent efficient class. The Cleveland folks will also exhibit the U. S. truck, concrete mixers and Faultless gas engines. H. W. Kardell, inventor of the tractor, will be there and give personal attention to inquirers. There will be some action, even real movies, in the Kardell exhibit.

H. G. Knapp, manufacturer of the Knapp tractor plow, will attend the demonstration and will have the special Fordson plow on exhibit at the William L. Hughson space.

The Ford Motor Co. and Wm. L. Hughson Co. exhibit Fordsons, Oliver and Roderick Lean lines, American Seeding Machines, cutaway cross section Fordson. For the first time Ford, Oliver and Hughson Cos. will assemble complete line. Chief Designer Altgelt, James Oliver and Sales Manager Collins represent the Oliver Co.; Wm. L. Hughson, Manager S. W. Nerney, Harry Lamster and O. R. Peterson of S. F., Manager H. W. Nerney, L. A., will represent Hughson Co. The Ford Motor Co. will be represented by Western Manager B. L. Graves, Assistant Manager I. B. Groves, and B. F. Davis of S. F. Other Eastern representatives will be Howard Seeley, manager of the tractor implement department of the Oliver factory, and Marshall Collins, sales manager from South Bend, Indiana. Mr. Ackley of the Woods Bros. Threshing Machine Co., Mr. Eikert of the Roderick Lean Co. of Mansfield, Ohio and Fred Serviss of the American Seeding Machine Co.

Roads that lead to the National Tractor Show of the West

THE great popularity of the Gray Tractor throughout the Middle West, Canada and European countries is the result of satisfactory service to the men who own them.

Dealers who sell the Gray Tractor are seldom called upon for repairs or to give mechanical attention. Owners who have had Gray Tractors for five, six and even nine years say that their tractors are still giving very satisfactory service.

The Gray gives such universal satisfaction because it is built right from start to finish.

On Display at the Sacramento Fair And Los Angeles Tractor Show

Mr. John Hughes and other representatives of the Gray Tractor will be glad to meet those who are interested in buying a Gray or in securing the agency for its sale.

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

The Mutual Tractor Unit

THE adjective "mutual" describes the fundamental principles of the Mutual Tractor Unit in one word.

It is a cooperative organization. Each rancher has a direct interest in the work carried on by the company. When first organized the rate per acre was fixed at \$25. This was enough to secure the necessary equipment to start the work. Later additional equipment was purchased with the proceeds of the earnings of the outfit. A fixed rate per hour is set for the cost of operation. This covers the cost of operation and allows sufficient surplus to cover depreciation on the equipment.

At the present time the equipment consists of three tractors, two cultivators, two harrows, two disk harrows, one furrower, a spray rig and team, with wagon and use of small harrow. This outfit handles about 200 acres of five and ten acre groves, grouped fairly close to each other.

All branches of orchard work are handled; furrowing, irrigating, spring tooth harrowing, cultivating, as well as spraying for spider and scale, pruning, etc. Disk harrowing, especially in the spring, is one of the most important features of the tractor work.

As practiced in this organization, this work begins late in January or early in February to prepare the ground for successfully holding the moisture uniformly during the blooming period. Disk work is immediately followed by harrowing to clear the ground of any trash that may be left from unfinished disking. This is followed by deep cultivation. This work, of course, is carried on as the weather and condition of the ground permit. So far all groves have been prepared for irrigation early and are in excellent moisture condition of the soil. Early spring schedule of the work was arranged in accordance with priority of order from each rancher. The summer schedule is determined by the irrigation schedules. This gives a definite method of procedure for the organization to follow.

As the equipment is sufficient to handle 250 acres the service given is both prompt and of a high grade. Soil handling under proper conditions is one of the special aims of the management. This is carried on with the purpose of both handling the soil at the proper moisture content and of sufficient depth to hold the moisture for the maximum length of time possible.

Each employee is a carefully chosen man and from the start is taught the best and quickest way to obtain the best results. He is given every consideration and any suggestion on his part is taken up by his employer and, if practical, put into operation. This gives the individual employee an active interest in the working of the organization.

Operation records are kept and are of such character that loss of time and inefficient methods are reduced to a minimum. This keeps the employee interested and the employer satisfied that operation costs are within reason.

Spraying is carried on at irregular periods, depending on the necessity of control for spider and scale. Spray guns are used, operating under pressure of 300 pounds. The guns are used in preference to the sticks, as the under sides of the leaves are thoroughly wet when spraying for spider, and the interior foliage and limbs are more easily wet and there is less chance of an inferior job being done in the case of scale.

In actual operation of the unit the work is carried on under varying conditions of weather and of varied type, as desired by the individual rancher. It may be of interest to note, however, that the general soil handling and ordinary orchard methods are closely similar, regardless of varying type of soil. The same type of machinery is used on all types of soil. Time allowances and the amount of weights carried, however, vary with the type of soil and moisture conditions of similar soils.

MACKIE TO INSTALL VACUUM FUMIGATOR AT PORTLAND

D. B. Mackie, field entomologist in the office of pest control, California department of agriculture, left his headquarters at Los Angeles for Portland, Oregon, to supervise the installation of a large vacuum fumigator for the Kings Food Products Company.

The installation of this vacuum fumigator will mark the commencement of a series of similar fumigators to be established on the Pacific Coast for the purpose of fumigating food products. The successful experiments in vacuum fumigation conducted by the office of pest control of this department in California, especially with regard to the fumigation of food products in the ultimate container before reaching the consumer, will undoubtedly lend impetus to the coming adoption of this method of safeguarding food products generally.

PINEAPPLES IN HAWAII

Through the Honolulu Star Bulletin it is learned that pineapple packers in Hawaii consider this year to be the biggest the industry has ever known. It is anticipated that 6,000,000 cases of pineapples will be packed during the year, daily deliveries already averaging about 65 carloads.

PAIGE

THE MOST BEAUTIFUL CAR IN AMERICA

IT is a matter of common knowledge that our sturdy Paige Glenbrook model marks a distinct advance in the building of light sixes. Scientifically considered, it stands as the embodiment of an entirely new conception of mechanical excellence in a car of five-passenger size.

The Paige Glenbrook, it must be remembered, is distinctively a product of the war period. Three years of constant research and ceaseless experiment were devoted to it by Paige engineers before it was ultimately perfected.

Its six-cylinder motor is a product of unusually high refinement, reflecting in every particular

the standards of precision and accuracy developed by the war. And, in body and chassis also, it is a striking example of twentieth century progress in both design and construction.

The Paige Glenbrook is, therefore, in every sense of the word, a strictly modern achievement representing the best that automotive engineering has ever produced in the building of light sixes.

We ask that you give this due consideration before deciding upon your next motor car purchase. If you value true efficiency and dependability in a motor car, your choice will undoubtedly be a Light Six Paige.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

Tough luck! Enormous amount of most interesting stuff ("stuff" is a perfectly respectful term used by printers for copy) regarding the state fair must be held over.

* * *

It was a great fair in every department. We had some long editorials. They were to be colored in violet and purple and red, white and blue, but we will let the first five words of this paragraph express them all.

* * *

But, forgetting the things which are past, there is another great event coming, the National Tractor Show, beginning next Monday morning at Verdugo Woodlands. The brownies, the kewpies and all other fairy folk have been making more beautiful one of nature's beauty spots.

* * *

Tractors, trucks and other forms of farm power are being installed. Tools and implements which make men's labor lighter are being arranged for inspection. It is going to be a great show.

* * *

Then there is another show coming. It is of livestock and will be held in Los Angeles, October 2. More of that later when we have more room and more knowledge of its various features.

Tulare County fair is closing as we write. Earth's bounties, as bestowed by Central San Joaquin Valley, are being shown.

* * *

Likewise San Fernando Valley fair, not far from Los Angeles, is exhibiting this week its pure breds and its soil products.

* * *

Next week there will be Kings County, San Diego County, Ventura County all dressed up and a place to go—their own county fairs.

* * *

The following week Glenn County, Fresno County, Shasta County, with other counties scheduled for the next.

* * *

It's a great educational season. We hope some of the scenes of things seen at the state fair and some of the pure breds there exhibited and illustrated in this issue will induce liberal attendance.

* * *

California cooperation has succeeded all too well. It must be discouraged. The wheels are grinding, set in motion by the federal government. We believe it is an unjust attack; we are positive it is a most unwise one. If the attorney general wins a great industry will be discouraged and growers will be ruined.

* * *

Last Saturday we rode in a long, long procession. More than a mile the autos stretched out. It was not a funeral though it was made up largely of lemon growers. We rode from orchard to orchard—in Ventura County; we asked questions of the soil, of the trees, of the house where bugs and insects are propagated, of packing houses and of each other. We ate a most delightful meal and talked of discouragements now confronting the grower. A number of really interesting things will be told about it and some interesting photographs shown next week.

* * *

Again, harmony and success. Arizona cotton growers and quarantine officials and California cotton growers and quarantine officials have not fully understood each other. They met; they talked; they agreed. Old quarantine regulations aimed to control cotton seed movements only. New regulations ask for similar control over lint, waste, sweepings, seed hulls, bags and bagging and second hand cotton machinery, also disinfection of cars at state line. This was all at a meeting held in Los Angeles this week. More details later.

FARM BUSINESS

The department of agriculture has issued Farmer's Bulletin No. 1139, "Method of Analyzing Farm Business," to induce more successful business methods of farm management. We have seen no reference in it to the fact that these directions might enable the farmer to get by with less of confusion when the time comes to make out the income tax return, but that time will soon be here, in fact, within a very few weeks. It is exasperating to the best of bookkeepers; it certainly is perplexing for one whose whole effort is given to the production end, but a bit of bookkeeping is necessary for us all and we believe this bulletin, which may be had for the asking by writing U. S. Department of Agriculture, Washington, D. C., will aid the farmer materially in definitely stating the exact financial condition of the farm account.

Raisin Growers Attacked

THIS government of ours is a peculiar and complex thing. It is a government of the people and for the people, yet individuals, or at least divisions of the government, must be given great power and the possibility of doing great injury to many of the people. A case in point at this moment is the suit against the cooperative association of raisin growers.

A more truly beneficial cooperative association never existed. Years ago the present members of this association were 10,000 individual vineyardists, discouraged, almost ruined, by a raisin market under control of united buying and shipping interests. In their desperation these raisin growers united; they secured justice and that without unjust tax on the consumer.

Naturally, during the past two years raisins, as well as all food products, have advanced. The success of the growers has called for most intense opposition on the part of interests which were injured commercially. In addition the office of the attorney general has been making investigation as to any possible violation of the anti-trust laws. This has resulted in recommendation being made to the company. These recommendations were received and are being acted upon by officers of the cooperative concern, but for some reason at the beginning of the marketing season of 1920 the attorney general's office has gone still farther and petitions

"That the court upon such application and hearing issue its preliminary injunction against the defendants and all other persons whose names are unknown to the plaintiff, unlawfully acting, combining and conspiring with them as aforesaid, and all other persons whomsoever, commanding and enjoining them, pending the final hearing of this cause, not to enforce, or threaten to enforce, or suggest the enforcement of, any of the contracts heretofore made between the defendant corporation and growers of raisin grapes requiring the later to sell and deliver their crops of such grapes to the defendant corporation, on any terms, liens or conditions purporting to be provided for by the terms of such contracts or any of the contracts heretofore made with jobbers or wholesale dealers requiring them to purchase raisins from the defendant corporation at prices fixed by the defendant corporation; and not to employ any of the other above described means or methods of monopolizing trade and commerce in raisins and raisin grapes."

Naturally the Associated must fight this attack; its existence and the existence of raisin growers depends upon this cooperative movement. The directors are considering methods of procedure. We note the following in the Fresno Republican of September 11:

"The first tilt of the big battle is set for Monday, September 20, when the Associated's representatives must appear before Judge Bledsoe in Los Angeles to show cause why an injunction should not be issued restraining further operations by the organization. In the opinion of Judge Lindsay no such injunction will be granted as the loss to the defendants in such procedure would be tremendous, with no chance of indemnity even in case of subsequent vindication in the trial of the suit.

"The attorneys for the defendant corporation will present to the court numerous affidavits to establish that there was neither coercion nor intimidation nor other improper means employed in procuring signatures to contracts from growers.

"It is admitted that in the remote possibility of the court's granting the injunction, the Associated will be seriously affected. The law will be obeyed, it is said, and no subterfuge or evasion will be resorted to. No such development is anticipated, however, and it will be many months thereafter before the suit itself will come to trial.

"That we have been singled out for prosecution from among all the cooperative farmers' organizations of the country is of course a tribute to the activities of our friends and well-wishers, the independent packers," said President Wylie M. Giffen yesterday. "We have always prided our-

selves that the company observed the law, dealt fairly with its members and its customers and kept the raisin business from degenerating into what it was before the days of organization, a football to be kicked about at the whim of the packers. In these days the grower took what the packer was willing to pay him, and there is none of us who drudged in the vineyards in those days who has not partaken of the benevolence of these same outside packers, usually represented by red ink. It would be somewhat amusing, were it not a serious matter and somewhat amazing if we had not had past experience, to find these packers now protesting with much shocked patriotism against the operations of an organization which has developed a great industry, brought prosperity and progress to a big territory, and conferred blessings upon thousands of people. Where we have erred apparently has been in banding together to sell our product without the assistance of the very man who made our cooperation necessary.

"The very principle of cooperative farming is concerned in these proceedings, for unless farmers can be permitted to cooperate under a system that gives their organization real solidity, they can accomplish little. We cannot go back to the old conditions when we were at the mercy of the packers. Our cause is just and because it is just we look for vindication that will end for all time the vexatious shafts of legal attack aimed at us by competitors."

In the meantime the Associated Raisin Company has taken its case direct to the growers, and is appealing to satisfied raisin growers to rally to the support of the company. Those who signed their contracts willingly, and who wish to help in protecting the interests of the association are asked to sign affidavits to that effect and rush them to the raisin company offices.

"If you were 'coerced' your contract will not be enforced," is the declaration which the Associated is sending broadcast to its members, replying to the charges that growers were forced into the association."

Senator Phelan makes an especially strong appeal for the growers in the following telegram to the attorney-general's office:

San Francisco, Cal Sept 10, 1920
Honorable A. Mitchell Palmer
Attorney-General of the United States.

I believe the suit brought by your department of the government against the Raisin Growers Association threatens great injury to a large number of worthy people who have developed this great California industry along cooperative lines. This is one of the worthiest cooperative associations in the United States and one of the most successful and beneficial. It represents the true principle of cooperative association. It has reached a result in practice that is being sought by farming and labor associations throughout the United States. I am informed that the basis of the accusation against this most productive people is that there are some technical objections to the procedure under which they operate. I am also informed that these technical points can be readily removed. It would seem, therefore, that when a great principle like that of cooperation is involved that there must be some method of adjusting technical points of organization other than that of dragging a great industry and its enterprising representatives before the court. In presenting these views I very respectfully call your attention to the obvious fact that this is the harvest season when the banks of this state are co-operating with the individual growers to enable the harvesting and transportation of the raisins. No time could have been selected for the bringing of this suit which would have done greater injury to the many people concerned than the present time. There are more than ten thousand growers concerned. The association under attack has the only facilities in existence for the handling of this crop. The organization has been in existence for many years. The harvest time would seem certainly a most inopportune occasion for the government to bring an action to determine legal questions that have been in existence

(Continued on Page 366.)

Now

Northern California Will Have Railsback Service On Allwork Kerosene Tractors

To the hundreds of farmers in Northern California who have felt the need of thoroughly efficient service to help them get the utmost earnings from their Allwork Kerosene Tractors, we take pleasure in announcing that we have been appointed distributors for the Allwork Kerosene Tractor for Northern California and Nevada, in addition to Southern California, which we have heretofore represented for Allwork Kerosene Tractors.

Allwork Kerosene Tractor

L. M. Railsback Company

REPRESENTING Allwork Tractors

Northern and Southern California, Nevada, Arizona, Hawaiian Islands and Philippines.

Killefer Farm Implements

Service—parts and the complete Killefer line in Los Angeles County.

Oliver Plows

Black Hawk Spreaders
Black Hawk Planters
Steel Wheel Trucks
Hardie Sprayers
Superior Drills
Winona Wagons
Aspinwall Potato Machinery
Knapp Orchard Plows

Now Northern California and Nevada farmers will have the same high grade Allwork Kerosene Tractor Service that Southern California farmers have enjoyed. Our Service to owners of Allwork Kerosene Tractors is complete in every detail. A full stock of parts is carried—and we have engaged a staff of skilled mechanics who are experts on Allwork Kerosene Tractors.

Before you buy a tractor—be sure you will be able to secure prompt and intelligent service. Compare other service offers with Railsback Service. Note the thoroughness of Railsback Service in every detail—and how we help you get the most earning power from your money-making Allwork Kerosene Tractor—the tractor which has proved to be the ideal for every California requirement.

Burns Kerosene—More Power Less Expense

No special kerosene carburetor required with an Allwork Kerosene Tractor—because the Allwork engine is designed and made to burn kerosene. And experience in California under varying soil and climatic conditions has proved that the Allwork is the one successful kerosene-burning tractor.

MADE RIGHT

The Allwork Tractor will require very little service. Many owners have never had to call for service. This is largely due to its scientific design and construction. It has Timken bearings—turns in a 9 foot radius (ideal for orchard use)—differential with short twin brakes—weighs 4,500 pounds—height 55 inches—width 50 inches—five bearing crankshaft—oil enclosed governor—has swinging drawbar and three speeds forward and reverse.

KILLEFER Farm Implements

We now have the agency for Los Angeles County for the famous Killefer line of farm implements. These implements will give unusual service—because they are designed and made to meet California soil conditions. Our efficient Service Department insures you the utmost usage and service from your Killefer Implements.

If you are not using Killefer Farm Implements—it will pay you to let us tell you about them, and explain their vast superiority over implements that are not adapted to Southern California requirements.

A partial list of the Killefer line includes Clean-Cut Weeder and Mulcher, Combination Sub-Soil Plow, Gopher and Drainage Plow, Adjustable Extra Heavy Orchard Cultivator, Automatic Double Tractor Disc, Cross-Kill Clod Crusher and Tractor Chisel.

We earnestly urge that you call at our salesrooms and inspect these Killefer Farm Implements.

Visit our showrooms or write for further particulars.

Concerning Our College of Agriculture

By Russell T. Robinson, U. C. 1915

ARTICLES appearing in your paper relative to the University of California college of agriculture have attracted my attention. The contention of the writer of these articles seems to be that men coming out of this college of agriculture do not measure up to the standard of those sent out by other such colleges throughout the United States, and that the method of instruction practiced at the institution is at fault. Discussion of the matter is invited and evidently solicited from those holding a certain viewpoint, but I trust that if criticism is to be offered care be taken that it is genuinely constructive, broad minded and free from the desire to air a petty grievance.

As to how the graduates from this

college compare with those from other similar institutions, I will admit I have met very few of the latter class, too few to make a fair comparison. Of those I have met some impressed me as knowing their business well and others as being very deficient. Regarding the men coming from California's college of agriculture, those who have the direction of the college in their hands should be better informed than anyone else.

The last article in the Cultivator emphasizes the point that 130 California men attended Oregon agricultural college last year. Was any attempt made to learn how many young men and women from Oregon have attended California's agricultural college and why they came to California instead of going to O. A. C.? To me it seems like a very serious lack of judgment on the part of anyone who elicits criticism of the greatest weakness of an

institution from one who has never attended that institution.

Last year a questionnaire was sent by the college of agriculture to all its available graduates and the questions asked indicated that improvements in the method of instruction were being given consideration. In fact, one of these questions was whether it was believed that more time should be spent at Davis farm. I will elaborate somewhat on my ideas as expressed at that time.

I believe that the first two years should be spent at Berkeley for the following reasons:

First—There are certain subjects necessarily preliminary to launching upon one's major subject, and these can most advantageously be taken at Berkeley. I believe that work in chemistry, botany, bacteriology, zoology, geology, certain work in soils, etc., can best be given at Berkeley because the most advanced facilities for such work are available there, and properly so, because other students besides those in agriculture require this work. To duplicate would throw an unnecessary burden upon the taxpayers. It would be unthinkable to duplicate certain of the library and laboratory facilities,

not that they are so wonderfully fine but the money can be used to so much greater advantage.

Secondly, I contend it is much better for a young man just entering college to find himself only one of several thousand. If he is made of the right stuff it will spur him on to the determination to make good, because he knows if he doesn't make the effort he will fall by the wayside. In the smaller college, where he is one of only a few hundred, it is easy for him to get an inflated idea of his own importance. It may even be possible for him to become indolent and still get by because he gets enough individual attention to pull him through. Perhaps this can be used as an argument for the smaller college, but I am doubtful of the sort of man which would result. In the college, where all are pursuing the same general line of endeavor, does the student not have a restricted perspective? Can he possibly have the broadening influence of a university where he is not in contact with others who are following some entirely different line of activity?

Certain of the letters quoted in the Cultivator speak of the cost of living in Berkeley, and say that men who earn their way are looked down upon by others. City living is always more expensive than rural. If the agricultural college were to be bodily transferred to Davis, city conditions would exist there too. It is also true that Berkeley affords more opportunity for one to earn fairly good money and still continue his college work. I worked all through my four years and never felt that I was looked down upon. I did not join a fraternity, but was the guest of various houses many times during my four years. I think it would surprise the general public to know how many are entirely or partially self supporting while pursuing their college work.

I strongly advocate that the last two years of the university course be spent in residence on the farm at Davis. When the student reaches the point where he is ready to study "types and breeds of farm animals," "farm machinery and mechanics," "irrigation practice," etc., the place for the classroom is in the stock pavilion, around a mowing machine, or beside a weir. There can be no denying that the impressions gained under such conditions are far more apt to be accurate and lasting. I do not believe anyone realizes this truth any better than those who have the direction of the college of agriculture in their keeping. But whether the time which should be spent on the farm is decided as two, three or four years, are the facilities for housing and instructing the increased number of students available at Davis? Decidedly not. Where is the money coming from with which to make such provision?

Along with advocating an improvement, had we not better get behind a movement to provide the means with which to make the improvement? We would not expect an artisan to turn out a fine piece of work when he is not provided with the tools necessary to do such work. How much do we know of the problems before those managing the affairs of the college of agriculture? To offer constructive criticism means that we must first acquaint ourselves with the various phases of the problem and then suggest a workable plan for improvement. I will frankly admit that what I have offered above is only an idea; it is not accompanied by a plan of execution. This letter is, however, an expression of a sincere desire to be of assistance if I can.

Farm Hands and Engines

When hiring a farm hand, you try to secure one you can trust—one that works hard and is steady and regular in his habits. You have little patience with men who loaf, waste time and take days off.

Use the same judgment in buying an engine. Select one which is powerful, efficient, and economical—one which will do its work when called upon, without trouble or delay. Buy an engine equipped with a Bosch High Tension Magneto and you're sure to be satisfied, for ignition is the most important factor in engine performance. With the extra big, hot sparks of a Bosch Magneto, every bit of gas in the cylinders is fired instantly even though low grade fuel be used. That insures maximum power, economy and dependability.

Insist on Bosch Magneto Ignition when buying an engine whether used on car, tractor, truck or power plant. Three million Bosch Users agree that it's your best guarantee of faithful, dependable service.

load. Remember to get up motion first.

neglect to watch that gap between the rocker arm and valve stem to see that it never widens to more than 1-16 inch.

get into the habit of running your throttle and spark lever back and forth violently.

think that your motor will shoot on all four cylinders if the spark plugs are not in good order.

blame the stopping of the engine on ignition trouble when it may be lack of fuel.

put off tightening wires and fixing poor connections.

work the tractor when there are any loose bolts.

try everything your friends suggest.

start off without the oil strainer in the bottom of the crank case.

leave tractor ailments to cure themselves. They need careful attention.

do anything you are not sure is right.

be stingy with oil. It is easier to keep the machine greased than to be making repairs.

be too hard on the tractor. Slow down over ditches and rough places.

keep on going when there is a pound in the bearings.

run any risks by filling the supply tank with gasoline when there is a fire burning near by.

attempt mending a leak in a gasoline tank with solder before you have made it safe by filling it with water and allowing it to stand for some time.

do too much filing on contact points in breaker box. It wears them out quickly.

be so anxious to go one more round when there is not much oil in the crankcase.

forget that a little kerosene on your valve stems will clean off the gum and carbon and make them work freely.

disregard an unusual sound when the tractor is working. It needs attention immediately.

be vague in expressing your wants when you write to the manufacturer for extra parts. Tell him exactly what is needed and where and how you want it shipped.

MILLION NEW CARS ADD TO ROAD WEAR

That the present interest in the construction of new highways should not divert attention from properly maintaining highways already improved is a point which the bureau of public roads has had occasion to emphasize many times in recent months, particularly in view of the enormous increase in motor vehicle traffic which is taking place. The bureau recently completed a compilation of statistics from all the states of the Union showing that there were a total of 7,565,446 registered motor cars (including motorcycles and trucks) in the United States in 1919. This is an increase of 23 per cent, or 1,418,829 motor cars over 1918. Such figures indicate that the country's highways are being used far more than in the past, it is pointed out, and in consequence added attention must be given to the repair problem. The increase in the number of cars for 1919 over 1918 represents about ten per cent more cars than the total number registered in the entire United States for 1913.

Additional use of roads and streets has, of course, been accomplished by additional revenue paid to state and local governments in the form of license fees, which in nearly all states are devoted to highway needs. The registration and license fees for automobiles, trucks and motorcycles in use in 1919 totaled \$64,697,255.58—an increase of 20 per cent over 1918. The total revenues for New York and Pennsylvania the past year were about double the revenues received for all motor vehicle registrations and licenses in the entire United States in 1912.

CHINESE CROPS

Manchuria is primarily an agricultural country. The crop most extensively grown is kaoliang, known botanically as sorghum vulgare, the seed of which is the staple food of the natives and is also used as fodder and for the manufacture of a strong alcoholic drink known as samshu. The stalks of this grain are used for fuel

as well as for light construction purposes. Millet, barley, buckwheat, cotton, maize, wheat and rice are grown in moderate quantities. The production of rice, however, is rapidly increasing, and last year's production exceeded 1,000,000 bushels.

The root crops are not so important, although sugar beets are being cultivated in large quantities and, under favorable conditions, can be made to yield from 14 to 18 per cent of sugar. Hemp and tobacco are grown both for local consumption and for export. The tobacco is of good quality and, if foreign seeds are used and the leaves properly cured, can be used to advantage with other tobacco in making high grade cigarettes. The soya bean is the most valuable crop and is of greatest importance commercially. The phenomenal rise in the price of bean oil abroad during the last few years has given a great stimulus to the industry.

Before the war thousands of tons of both shelled and unshelled peanuts were shipped from North China, principally from Tsingtau, by German firms to Marseilles, in pre-war days practically the source of all peanut oil in international commerce. Since the war peanut oil in large quantities has been shipped from this district direct to the United States. Also, as a result of the war, castor bean oil was for the first time exported direct to the United States in 1917, in which year initial shipments of walnut oil were also made.

NOTES

(Continued from Page 347.)

The National Tractor and Implement Show of the West opens next Monday, September 20, at Verdugo Woodlands, and continues till the night of September 26.

* * *

Wm. Gregory & Sons will have exhibits of Trundaa 25-40. This is their regular Model 10. There will be little featuring of the spectacular, but a straight exhibit of a tractor from regular stock, and then, for the inquisitive who may want to see how the wheels go round, there will be a torn down transmission. Just a little showing of the method of construction and, more, how power is transmitted to each driver independently.

* * *

The H. J. Ruddle Co. will feature as a part of its exhibit a miniature orange grove, likewise a bean field. In the orange grove will be 9-18 Fageol tractor showing ability to make short turning radius; likewise Fageol in the bean field connected with cultivator, ready for working up the soil. These on either side of the exhibit, while the center will be occupied by the dependable even speed Fageol truck.

* * *

The Bates Steel Mule 18-25 will be exhibited by F. T. Briles. Mr. Briles will also exhibit a J. T. 20-40 crawler type. Another line shown by Mr. Briles is the Schmeiser levelers and hay derricks, in fact, a full line of Schmeiser products. The home factory will be represented by Harry Bates and Edward V. Arkny. Another assistant in this exhibit will be Sam Hunter of the Sam Hunter Co., which controls the districts of Oregon and Washington for the Bates tractor.

* * *

The Hart-Parr 30 will be shown by the Southern Border Motor Co. This is a real kerosene tractor. One side line exhibit in this booth will be the tractor tender which has proved a wonderful labor saver for many a farmer. This is a two wheeled device for carrying fuels and oils. Oliver plows of various types are also educational features.

* * *

The John Deere Plow Co. will hardly exhibit its full line of implements. That would take a large portion of Verdugo Woodlands. But two or three of the up-to-date propositions, like the No. 40 Two Bottom Plow and the No. 5 and other plows especially adapted to tractor use, will be shown. Then they will show the Waterloo Boy 12-25. Eastern visitors who will assist in this exhibit are Theo. Brown, chief of the experiment department of the John Deere Plow Co.; Ben Kough, general manager of the Deere works; George T. Wheeler, manager of the San Francisco house; and W. L. Paul, Coast manager. These exhibits are made by the L. A. Implement Co. and are in charge of T. J. Ross.

* * *

The J. I. Case Threshing Machine Co. will feature regular stock models to be shown exactly as in regular stock and sold to the farmer. Three models, the J. I. Case 10-18, 15-27 and 22-40 will be exhibited. There will also be small size grain separator and bean thresher. Disks, water tanks and rock crushers will be side lines, but there will be no side shows. Visitors who will assist in this exhibit are A. J. Olson of San Francisco, Manager Ramsey of the sales department, and Plow Expert Kenneth from the factory. This exhibit will be under the general management and in charge of Richard Stockton.

* * *

The J. I. Case Plow Works Co. will exhibit the Wallis. It will be in charge and under the management of J. R. Adair with O. F. Braecklein as assistant. There will be wheels going round "Get on the seat and try it" will be the invitation. But one of the most interesting features of this exhibit will be a cut out model of the Wallis. The frame of the Wallis is of U-shaped armor steel. It is supplied with occasional handholes which permit access to various working parts, which permits adjustment, and at the same time made air, or at least dust, tight. In this cut out model these are all removed and additional portions cut away to show all the interior mechanism. J. I. Case plows, a cotton lister, eight foot harrow and four bottom disk attached to tractors will be features.

One of the outstanding features of the National Tractor Show will be the exhibits of California made tractors. Our own home products built to fit the conditions which tractors and implements must meet, under the various soil compositions of California, are examples of engineering and manufacturing ability equal to anything shown from Eastern factories.

* * *

This show is what they call a "still exhibit," but a little bird tells us that there will be some action in the Avery Company's "still exhibit." We have heard of movie horse races, and we understand the Avery exhibit may remind us of the methods followed by the movies. Anyway, something will be moving, at least that is the intention of Manager Rainey.

* * *

The exhibit of the Motors Equipment and Tractor Company will be comprehensive, consisting of one Toro 6-12 tractor painted white, a Toro motor cultivator specially equipped for bean cultivation, and one of wider tread for cotton cultivation. There

will also be three Beeman garden tractors, each equipped with tools showing their adaptability to various farm operations. H. T. Hayes and a corps of men will be in charge of the exhibit. C. Peters, factory representative of the Beeman Tractor Company, and M. R. McLaren, special representative of the Toro Motor Company, also will attend the show. These men will be ready to explain all the features of their various lines.

* * *

The L. M. Railsback Company will display some new special tools and some new implement labor savers. We believe labor saving will be the one greatest lesson of this great show. This company has been recently made agent for California for the Allwork tractor, and will also exhibit Killefer and Oliver implements.

* * *

The Union Tool Company of Torrance, a two and a half million dollar organization engaged in the manufacture of gas engines, pumps, oil well machinery and the Union Sure Grip 12-25 tractor, and who were engaged

during the war in government work for the Shipping Board, will show the Union Sure Grip tractor at the show. This tractor is a finished product reflecting the highest type of Western manufacturing and engineering ability. Careful study of the specifications, materials used and general appearance will convince one of its ability to perform all the tasks of modern farming in a thoroughly satisfactory manner.

* * *

The Farwest Sales Company will make a showing of Utilitor garden tractors with full line of attachments, including field mowers, lawn mowers, cultivators, plows, seeders, etc. It will also have power cider presses warranted to produce an article with less than half of one per cent. There will also be two models of one of the newer types of tractors, the Stockton, both the wheel tractor and sure grip. The Stockton people, by the way, have recently greatly enlarged their factory and moved to Sacramento. H. L. Marsh, president of the Farwest Sales Company, will have the Southern California district.

Introducing the New Stockton Sure Grip Tractor

The new Stockton Sure Grip Tractor will readily appeal to all who need a small, compact tracklayer for Orchard or Field work. Designed by experienced tractor engineers to meet the exacting conditions due to California soils and crops. Rigorous tests and months of hard, steady work during the past year proved the value of the manganese steel track which is sold under a remarkable guarantee.

From front to rear, the Sure Grip is carefully built and will easily maintain the reputation established by the old reliable Stockton Open Wheel Tractor. Both types of the Stockton Tractor contain high grade material and workmanship, and in design and construction are modern, assuring power, economy, endurance and ease of handling.

You can now select your Stockton in either Track or Wheel Type, as required for your work, and know you are getting the best machine of its size on the market. You will be pleased and proud of your selection.

Investigate. Write today for particulars and Circular C.

BUY A TRACTOR BUILT TO A STANDARD NOT TO A PRICE

The popular demand for Stockton Tractors, due to established ability in the field, has already outgrown the resources of the original factory at Stockton. To meet the necessity of larger production, an eight acre factory site has been secured at Sacramento. Contracts are out for modern factory buildings to be completed within ninety days. In the meantime, as far as possible, orders will be filled from the Stockton Factory.

Farms to Compete

The state land settlement board supplements the college of agriculture in promoting better farming and better business in rural California. In 1919 the board offered a series of valuable prizes to be competed for by the settlers at Durham in 1920. E. S. Wangerheim gave a pure bred Holstein for the best kept dairy farm. Mortimer Fleishhacker gave a pure bred

sheep for the best planned and best cultivated farm. S. T. Mason, Durham merchant, gave a pure bred Duroc gilt for the best cultivated ditch bank. T. S. Mitchell, president of the Commercial Bank of Durham, gave enough garden seed to plant a half acre, as a prize for the best cultivated farm laborer's allotment. Elwood Mead, chairman of the board, gave a trio

New Grammar School at Delhi

Water is King at Delhi

It is also an expensive ruler and it is to be saved to the last drop by the construction of an underground distributing system. The concrete pipe is being made on the settlement by returned soldiers who at the time this picture was taken were working and waiting for the allotment which will be made October 15. Applications for lands on the second allotment of this settlement have been received since September 10 and may yet be filed.

Why Are Hudson Owners Indifferent to Other Cars?

Isn't It Because Contentment In Hudson Ended Inquiry Into Others?

Thousands of Hudson owners know no other make of car. Their satisfaction in the Super-Six leaves nothing to tempt them to experiment elsewhere.

Our experience gives confidence to count every Hudson purchaser as a permanent owner.

Naturally we expect men of wide motor knowledge to select Hudson. But isn't it a revelation of the convincing way Super-Six performance overshadows the field, that thousands who profess little mechanical knowledge are just as unerring in their choice?

Can Any Endorsement Rival This?

For nearly five years Hudson has outsold all the world's fine cars. And today its distinction is so wanted that we see no curb to sales except the production limitations that fine, accurate building imposes.

More than 100,000 Super-Sixes are in service. That exceeds the output of any car in its price range by many thousands.

It is a verdict—100,000 strong—for qualities and abilities no

other car can share. It fixes the specific reason for dominance of a type, unlike any other car.

This chief issue is Hudson endurance. And it is exclusive, because it results from a patented principle. Others cannot use this invention, which by reducing vibration to within 10% of vanishing, made Hudson's unequalled reliability marks possible.

Its Endurance Limits Still Undiscovered

Years must elapse before we know the final limit of Super-Six endurance. We tried to establish those limits by test. Speedway trials, a double transcontinental run that no other car ever endured to finish, and the abuse of high-speed racing, failed to reveal the point at which Hudson endurance would yield. But they did establish that the Super-Six possessed greater durability than any other car ever proved.

The earliest Super-Sixes, built nearly five years ago, and still serving with undiminished satisfaction, testify how car life is practically doubled through this invention.

Hudson Motor Car Company, Detroit, Michigan

of pure bred fowls as a second prize for the best garden. The farms and gardens are to be judged by a committee of R. L. Beagles, superintendent of the plant introduction gardens near Chico; L. C. Shirley, farmer, and C. C. Brown, farmer. There has been keen competition among the settlers for these prizes.

Similar encouragement is to be given to the settlers at Delhi for the year 1921. Already Edgar M. Wilson has offered a valuable prize for the best winter garden grown on a farm laborer's allotment at Delhi, and the First National Bank of Turlock has offered a similar prize for the second best winter garden. For the season of 1921 the board intends offering prizes that will be worth the best efforts of the Delhi farmers. The prizes given by the board include one for the best planned and cultivated farm, given by Mortimer Fleishhacker; one for the best cultivated farm laborer's allotment, by Senator Frank Flint; one for the best dairy herd, by E. S. Wangerheim, and one for the best poultry farm, by Elwood Mead.

TRUCK FARMERS SHOULD CO-OPERATE

I am a truck farmer and have often wondered how to eliminate the middlemen and profiteers. I am going to submit my theory to your good judgment.

Say, for instance, the farmers form an association at a cost of \$2 per month each, rent a stall in the Los Angeles city market where their goods may be delivered and receipted for. The handler at the market in turn sells the produce direct to the retailer. With a wide-awake person in charge at the market the farmer would more than save the \$2 paid into the association in one load of produce, as well as realizing more for his products that he raises. This would also be a step in the direction of eliminating the profiteer middleman.

You realize the farmer works long hours and toils hard to produce a crop and probably hauls it 20 to 30 miles to the market and in many cases he does not receive enough for his load to pay for the time it takes to haul it to market, let alone the cost of producing it.

Why not wake the farmers up through your paper to this effect?—Subscriber, Redondo Beach.

An excellent suggestion and one which should appeal to the truck farmers. The Japanese have at least one such organization in Los Angeles County, and we believe it is succeeding remarkably well. In fact, all the Japanese truck farmers succeed in this respect better than Americans in this one line of farming. One trouble has been that the farmers have not taken into account the fact that this man who shall receive and dispose of the goods and make accounting to the grower must have considerable ability, know the marketing game and be of absolute integrity. Such a man can command a salary with private interests which has been larger than growers have usually considered they can pay. Hence they have been content with indifferent or possibly volun-

teer service. Volunteer service is the best on earth for a time, but from necessity it cannot be maintained over a long period. Hence the one man or, in case of a large number of growers combining, one organization, under a business head becomes necessary. This calls for funds. More, it calls for persistence. The latter factor is the more important for such organization, while new, is reasonably sure to make some mistakes, and some growers have not the persistence or the patience to stand for these mistakes while a permanent and successful organization is built up. It is not our intention to give a pessimistic tone to the suggestion of our subscriber, simply to call attention to some of the obstacles. On the other hand, there is every possibility for success and if the growers will go into it with correct understanding of the possibilities and the needs there is no reason why truck farming should not be put back on a paying basis and California's richest truck farming section saved to make attractive American homes.

THE WORLD'S PRODUCTION OF GOLD

The United States geological survey has given out some preliminary figures showing the production of gold throughout the world in 1919. The production in the United States was \$58,285,196; Canada is reported to have produced \$14,687,000; India, \$10,28,000; Australia (not including New Zealand or the islands), \$29,268,000; the Transvaal, \$171,640,123; Rhodesia and West Africa, \$18,631,070. There was probably a large decrease in the production of gold in Russia and Siberia in 1919. Some increase was probably made in the output of Central America and South America, which, however, was doubtless offset by decreases in the output of other countries. The incomplete returns now available indicate that the world's production of gold in 1919 was between \$345,000,000 and \$350,000,000. The world's production in 1918 amounted to \$380,924,500.

The survey further states that information received during the first six months of 1920 indicates a still further decrease in the production of gold in the United States and that the output for the year will probably be less than \$50,000,000. The production in Alaska, Colorado, California, Oregon and Montana will be much less in 1920 than it was in 1919, because water is very short for placer mining and many stamp mills are closed. Canada as a whole may increase its output, although the production of the Yukon districts will be smaller than last year. The output of Russia cannot be estimated. That of Australia will show a decrease. That of South Africa and South America will probably show no radical decrease. According to the geological survey the indications are that the decrease in the world's production of gold in 1920 will not be so great as it was in 1919.

MOST INTENSE RAINFALL ON RECORD

Two and one-half inches of rainfall in three minutes!

A reproduction of the rain gauge register showing that downpour—a record made in 1911 and still recognized by the weather bureau, as the most intense rainfall of which it has data—appears in the current number of the Monthly Weather Review, published by the weather bureau. The illustration accompanies a technical discussion of rain and sunshine in the Canal Zone. This heavy fall of rain occurred at Porto Bello in the Canal Zone.

Not alone in the Canal Zone but at 200 points in the United States the weather bureau maintains observation stations at which accurate records are kept of rainfall, snowfall, temperature, etc., so that any person interested can ascertain accurately the weather history of practically any section of the country by applying to the weather bureau.

The apricot crop this year was difficult to estimate because of exceedingly spotted conditions in nearly all growing districts. It is now estimated by the state department of agriculture about 55 per cent of normal, or 120,000 tons of fresh fruit.

For Orchard Cultivation

International Orchard Disk Harrow

This is the most popular and efficient of all tillage implements for general orchard cultivation. The gangs can be set to throw the soil toward or away from the trees or for hilling-up crops planted in rows, and can be adjusted to cut deep or shallow next to the trees. All adjustments can be made quickly. Broad sheet-steel shields cover the disk gangs protecting low-hanging branches against injury. An extension frame can be supplied that gives gangs a maximum spread of 11½ feet. Extra-long shields can be provided for use with this extension frame.

International Orchard Disk Harrows are made in two sizes—8 and 10 disks—and are furnished regularly with 2-horse hitch and a substantial forecarriage that keeps the harrow in line with the draft and makes turning corners easy.

See your nearby full-line International dealer in regard to one of these harrows or for tillage implements for general farm service. International closed-end peg-tooth harrows and spring-tooth harrows equipped with orchard guards are also especially adapted to orchard cultivation.

Harvest 20 to 45 Bushel to Acre Wheat in Western Canada

Think what that means to you in good hard dollars with the great demand for wheat at high prices. Many farmers in Western Canada have paid for their land from a single crop. The same success may still be yours, for you can buy on easy terms.

Farm Land at \$15 to \$30 an Acre

located near thriving towns, good markets, railways—land of a kind which grows 20 to 45 bushels of wheat to the acre. Good grazing lands at low prices convenient to your grain farm enable you to reap the profits from stock raising and dairying.

Learn the Facts About Western Canada

—low taxation (none on improvements), healthful climate, good schools, churches, pleasant social relationships, a prosperous and industrious people.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan and Alberta, reduced railroad rates, etc., write Department of Immigration, Ottawa, Canada, or

When Writing to Advertisers Say Where You Saw Their Advertisement

We've picked out a Water System for You

Drop in and take a look at the Dayton Automatic Water Supply System. You will see a well-built attractive looking water pumping plant—just the thing for your home.

The Dayton System will furnish you with every convenience of running water. It will do away with the ever-lasting drudgery of the pump and the water pail.

It will pump water to your bathroom, laundry and kitchen. It will give running water for stock troughs, garden, dairy and yard. It furnishes water pressure for the protection of your property from fire.

The Dayton Automatic Water Supply System operates by electric current—either farm lighting plant or central station. It needs little care or

attention. Just turn on the switch—give it a bit of oil now and then—and forget it. You will always have plenty of fresh, running water for every need.

Come and see for yourself how well it is made—how simple to take care of—and how thorough in operation. And you'll be surprised at its low cost.

RAISIN ASSOCIATION ATTACKED (Continued from Page 358.)

in their present form for a great many years. Obviously these legal questions could be settled as well at some other time when their consideration would not disturb and threaten ruin to a large industry affecting a great number of our population which is in progress of harvest and preparation for market of \$60,000,000 of raisins. Every fruit industry in the state is most seriously affected. Cannot the government, in the light of these facts, dismiss this suit and take up subsequently with the association amendments to meet any legitimate objections. I am informed by the Association's representatives that there are no steps that will not be taken to meet legitimate criticism. They have not consciously violated any law, and do not believe that they have done so unconsciously, but they are ready and willing to meet the government through your department in a frank and open effort to adjust any differences of opinion whatever. Under these circumstances it would appear to me that the interest of this state and the interest of the people at large would be best served by the dismissal of this suit.

(Sgd.) James D. Phelan.

Commenting on the suit and the injustice of it, Chester H. Rowell of the Republican says editorially:

"The suit to determine the legality of the Associated Raisin Company was evidently inevitable, so it might as well be met now as ever. By all accounts, the complaint is directed not so much to extraneous details as it is to the very right of the association itself, or of any association so constituted, to exist. With both political parties declaring in favor of that right, with a department of the government of California devoted to promoting it, and with many other states following California's example, the question of public policy may be taken as settled.

"The complaint that growers were 'coerced' into joining the association is untenable. That mistaken neighborhood sentiment did buldoze a few growers into signing who were unwilling to do so was notorious, but the Associated Company promptly repudiated that action and has never sought to take any advantage of it. An advertising agency did also prepare some 'rough stuff' copy for the Association. The Republican, as we recollect it, refused to publish that copy, and on its being called to the attention of the directors they ordered it discontinued and no more in that spirit prepared. There may have been some insertions elsewhere before this order got out. As to these minor incidents, affecting at most a few people and having no relation to the general situation, there is no dispute. We doubt if there was ever a Liberty Loan drive in which there were so few incidents of this sort. Certainly there is no labor union in existence that has not some members brought in by 'persuasion' equally inconsiderate. We are sure there are members of every political committee serving with like unwillingness. And there was never an early closing or other movement requiring unanimous action by merchants into which one or two were not persuaded urgently. Such things are always regrettable, but they always happen, and they are serious only when they are the center of the system instead of a mere accidental incident. In the case of the Associated Raisin Company they happened only in the rarest of instances, never with the directors' sanction, and no advantage was ever taken of them. We doubt if there was ever a Y. M. C. A. drive or church subscription so nearly free from coercion or undue persuasion.

"And when the complaint, in this instance, alleges that these growers were driven against their will into an association to increase the price of their goods and make money for them, it convicts itself of its own absurdity. Actually, the few who wanted to stay out did so because they thought they could get even more money outside. And the high prices complained of for Associated raisins this year are less than those same raisins bring under free competition when they reach the open market. The price is higher than the directors would like to charge and higher than they think it permanently good for the growers. But it is less than the public, this year, insists on paying.

Get a WADE Bean Thresher

Buy the thresher built especially for the man who wants a machine for his own crops. You do not have to thresh with the Wade "by the day" to make it pay for itself and a good profit besides.

Built for Western Conditions

The Wade thresher is manufactured by R. M. Wade & Company, Portland, the oldest agricultural implement house in the West. It is especially designed to meet Western conditions.

Plenty of Separation Surface

The Wade has plenty of separation surface and strong, well controlled air current. Doesn't crack the kernels. Built of best materials throughout. Threshes beans, peas, china peas, lentils, soy beans, vetch or other legumes. Capacity 20 to 35 bushels an hour.

Write for Descriptive Folder

If your dealer hasn't the Wade, write us for literature and full information on this wonderful machine.

INTEGRITY, CONSCIENCE AND CAPITAL
ARE BACK OF THE

UNION SURE GRIP TRACTOR

THE UNION SURE GRIP TRACTOR is manufactured and sold under an absolute guarantee, and is backed by the largest manufacturing corporation on the Pacific Coast. Their capital is Two and One-Half Million Dollars, and they have established a world-wide reputation by the quality and success of their Oil, Gas and Steam Engines, and a general line of Machinery which they have been building for the past fifteen years.

The Union Sure Grip Tractor is strictly a **CALIFORNIA PRODUCT**—built to a standard of perfection in design, materials, engineering features, and durability under hardest tests. It was built to satisfy the conscience of its Builders and reflect the Integrity of the Union Tool Company.

More than a Quarter of a Million Dollars, and years of careful experimenting and study of California conditions by experts, contributed to the **Ultimate Perfection** of the Union Sure Grip Tractor.

The Union Tool Company has no fear in placing this **Master Tractor** in the hands of California Farmers. No expense has been spared and the Union Sure Grip Tractor will do honor to the **Integrity and Conscience** of its Builders—and will perform the service of a **Thoroughbred** for its owner.

Your confidence will not be misplaced when you buy a **UNION SURE GRIP TRACTOR**.

Over Eighty Millions Worth of Citrus Fruit

J. DREHER retires as president of the California Fruit Growers Exchange; Charles C. Teague becomes the new president; C. F. Whitcomb is first vice-president; H. E. Swan is second vice-president and E. G. Dezell is secretary. From the annual report we note regarding marketing conditions in 1919-20:

In the fruit business each marketing season develops a series of conditions that are unlike those of any other year. This year there has been a continued high buying power throughout the country on account of the general prosperity. This has been especially marked in the industrial centers, where high wages have prevailed. This condition has had a favorable effect on the market for fruits like the orange, that are used primarily for food. The lemon, on the other hand, is instantly affected by weather changes, irrespective of the buying power of the consumer. People use the lemon primarily for making lemonade, and secondarily as a food or for toilet and medicinal purposes. During the summer of 1920, as in the summer of 1915, the temperature throughout the country has been below normal, and the consumption of lemons has thereby been greatly reduced.

In addition to the cool summer, the California lemon has had to meet more than the usual competition as a result of the depreciation from par in Italian exchange rates, the lire equaling about 25 per cent of its former value. Italian lemons have been sold throughout the summer in the United States at an average price which represents

approximately two-thirds the cost of producing lemons in California.

The year has also been characterized by the number of strikes among railroad employees, and among freight handlers and other labor who handle fruit from the cars to the stores in some of the principal cities. The railroad strike in April and May completely demoralized the national distribution of the fruit, and a similar condition has prevailed at times in some of the principal cities where local strikes occurred.

There was also a serious car shortage, which interfered with the distribution of the Valencia crop in the fall of 1919, causing a large part of it to be marketed in competition with the Navels from central and northern California and with the grapefruit and oranges from Florida, and disorganizing the seasonal distribution of varieties. The fruit has at times also been much delayed in transit. In the winter months, in which was a period of extreme low temperatures, this delay resulted in the severe freezing of an unusual number of cars of oranges and lemons.

Many of these conditions, such as the subnormal temperature, the readjustment in the handling of railroads and other matters referred to, are temporary in nature and should not be looked upon as permanent factors with which the industry has to deal.

Shipments and Returns

During the year ending August 31, 1920, the members of the California Fruit Growers Exchange shipped 12,144,964 boxes of oranges, 226,266 boxes of grapefruit, and 3,452,534 boxes of lemons, making an aggregate of 15,823,764 boxes, or 34,461 carloads.

The total shipments of citrus fruits from the state were 38,077 carloads of oranges and grapefruit and 8,680 carloads of lemons, making a total of 46,757 carloads.

The returns f. o. b. cars California for the fruit shipped through the exchange, including the estimated value of the cars yet unsold, will be approximately \$59,221,329. Using the exchange returns as a basis, the returns to California for the total crop of 1919-20, including the portion of the 1919 Valencia crop which was sold after August 31, will approximate \$81,200,000, representing a delivered value in the wholesale markets of \$106,600,000, including \$25,400,000 of freight and refrigeration charges. The retail dealer paid approximately \$121,100,000 for the fruit and the consumer paid \$166,000,000. The gross margin of the wholesale trade in handling California citrus fruits represents an average of about 12 per cent of its selling price, while the average gross margin of the retail dealer represents an average of 27 per cent of the retailer's selling price.

The exchange shipments for the 12 months period represents 73.7 per cent of the total shipment of citrus fruits from California, which is an increase of approximately 1.4 per cent over the preceding year. The exchange membership has increased during the past year from 10,000 to 10,500 growers, and the combined number of shippers, associations and district exchanges belonging to the organization has increased from 216 to 219.

During the past year the losses from bad debts and uncollected bills amounted to \$435.83, representing 3/4000 of 1 per cent of the f. o. b. value of the fruit. There has been returned to California through the exchange \$376,000,000 during the last 17 years. The losses of all kinds during this period have been approximately \$8,775, or 9/4000 of 1 per cent of the f. o. b. returns.

Regarding Navel Oranges

The Navel shipments of the exchange in 1919-20 equal 4,958,411 boxes, as compared with 5,723,794 boxes in 1918-19. The short crop resulted in a low average grade and in unusually large sizes, thereby making a more difficult sales problem for the organization to handle. The crop was marketed in competition with the largest crop of oranges and grapefruit from Florida, the latter crop running to desirable sizes and quality.

Valencias

The shipments of Valencias divide

themselves into two periods: first, the portion of the 1919 crop marketed after September 1, 1919, and, second, the crop of 1920.

In the fall of 1919, 6,262 carloads, or 2,917,582 boxes, were marketed through the exchange, representing the largest quantity of Valencias ever shipped after September 1. The 1919 crop of Valencias was the largest ever produced, the total shipments of 6,978,240 boxes exceeding that of the Washington

Lemons

California shipped 3,826,034 boxes of lemons during the 12 months ending August 31. A year ago the state's shipments totaled 4,224,972 boxes and the average for the last five years has been 2,914,980 boxes a year.

The total supply of foreign and domestic lemons in the country during the last year was 5,379,408 boxes. This is an increase of 10.3 per cent over the year previous and an increase of 26.5 per cent over the average of the last five years.

The marketing of the crop was filled with uncertainties from the beginning of the season on account of the general conditions of marketing already set forth. Prices were considerably above the average in the autumn months of 1919, due to favorable weather, and again in February, when the epidemic of influenza sent the demand to abnormal levels. In April the switchmen's strike prevented a satisfactory distribution and held back about half the fruit that should have gone forward.

The summer lemon market was the most unsatisfactory since 1915. This was due to the following unfavorable factors:

1. Cool weather, which prevented the usual demand for lemonade.

2. The depreciation of Italian exchange, which resulted in heavy importations of foreign lemons at low prices.

3. The high price of sugar, which discouraged the making of lemon drinks, and the increase in the number of soft drinks.

4. The shipment of weak and oversized fruit which had accumulated in California as a result of the above factors.

The year's importations of foreign lemons totaled 1,553,374 boxes, which is an increase of 76 per cent above the previous 12 months and 13.6 per cent above the average of the last five years.

The average price received for foreign lemons sold in New York was \$2.33, which under existing exchange rates, after deducting freight and duty, returned to the foreign shipper 32.5 lire. To appreciate the advantage of the present American exchange rate to Italian exporters, it should be noted that in 1913 the same average selling price, exclusive of duty and the difference in transportation, would have returned only 4.3 lire to the shipper. The duty on foreign lemons is now the equivalent of one-half of one cent, compared with 1½ cents per pound in 1913.

While foreign lemons have been selling at an average of \$2.33 in New York, it has been costing California lemon growers not less than \$3 a box merely to grow their fruit and prepare it for shipment. Average prices on foreigners sold in New York during the summer months were: May, \$2.14; June, \$2.27; July, \$1.74.

Regarding the new transcontinental freight rates the report calls attention to the fact that the former rate per 100 pounds of oranges was \$1.44, while the new rate is \$1.92, an increase of 38 cents per box from the former \$1.12 per box rate. For lemons the rate is increased from \$1.25 to \$1.666, an increase per box of 35 cents. The report states:

The amount that will be paid by the citrus industry as a result of the increase equals approximately \$8,600,000.

Fruit Growers Supply

The Fruit Growers Supply Company which purchases the orchard and packing house supplies for the members of the exchange has transacted a business during the year in excess of \$8,500,000. The value of the packing house supplies will approximate \$6,930,000. Orchard supplies will total about \$1,555,000, and miscellaneous supplies will add approximately \$80,000. The lumber operations at Hilt will total \$1,676,000.

FAIRBANKS-MORSE "Z" FARM ENGINES

Built-In Bosch Magneto Insures Hot Spark

"Z" Engine ignition—positive—from Bosch high tension magneto, built into every "Z" Engine, insures intense hot spark that gives utmost power from fuel.

The high tension system is simple—just a high tension magneto with spark plug—no complications—no moving parts. Magneto is high grade—has interchangeable parts—is as accurately made as a fine watch. It gives the "Z" added power—quick starting—smooth, steady operation.

Other "Z" features are: Runs on kerosene as well as gasoline; more than rated power; parts interchangeable; clean-cut design; long life.

Call on your nearby dealer today and he will show you why you should have a "Z."

STATE FAIR NOTES

(Continued from Page 352.)

tinness, for there was corn and alfalfa, fruits and nuts and all other things necessary in feeding the world.

* * *

Next was Los Angeles. The center of this feature was a vase made up of fruits and flowers of the southland surmounted by the spirit of Los Angeles in glistening white. It was a wonderfully striking exhibit. Citrus fruits predominated, but the diversity of Los Angeles agriculture was shown in display of avocados, olives, pomegranates and other fruits, together with corn, potatoes, pumpkins, alfalfa and all the staples of that great county.

* * *

Stanislaus, land of rich alfalfa fields and dairies, exhibited almonds, peaches, all other fruits and staples. In fact, all of the counties aspired to show their diversity and their ability as producers of general farm crops.

THE sixty-sixth California State Fair proved a record breaker all along the line. In fact, so many former records were smashed that an attempt to draw comparisons with former fairs fails for lack of a place to start. The fair just closed was certainly the most complete and representative exhibit of the agricultural resources of this state ever staged; the attendance figures far exceeded any former year; there were more county exhibits; more machinery was on display; the weather was all that could be asked; there were more fake gambling devices, but the great outstanding feature of the entire show was the remarkable showing made in the livestock department.

The livestock showing was remarkable from the standpoint of total numbers, quality of the exhibits and num-

ber of new breeders exhibiting for their first show. The early entry lists indicated a large showing, but the fair management was hardly prepared to accommodate the final flood. Stalls and pens were at a premium and several hastily built barns and sheds were required to house the overflow. Aside from the number of livestock on the grounds, the very marked quality found in all the judging rings was of such high character as to draw immediate and hearty appreciation from all visitors and furnished a topic for comment all the week.

Without attempting to say that any one particular department outshone the others, it is probably true that the swine department registered the greatest degree of improvement over former years. Nearly 900 head, representing all of the important breeds, were in the pens, and the general quality of the entries was above reproach. The entries were presented in decidedly improved condition, and the type shown followed very closely the most modern standards. Another striking fact noted in the hog show was the uniformity of the classes, there being less margin between the tops and bottoms than ever seen at

Sacramento. Next to the swine department the showing of beef cattle registered the greatest improvement. More Shorthorns and Herefords were on exhibit than in any former year. The dairy cattle division was hardly as well balanced or as representative as we have a right to expect in this state, but, at that, it must be admitted that the dairy cattle classes of the California state fair are easily in the lead of any Western state and the equal of the majority of the larger Eastern fairs. Indeed, this fact is true—it usually requires a higher standard of excellence to win in our dairy classes than in the other departments. A considerable falling off in entries was noted in the horse department, but this lack was largely made up by improved quality. Present conditions are such that exhibitors cannot afford to bring along a lot of cheap misfits as they have done in the past. The sheep department, while above the usual standard, was not as representative as it should be. For some reason that has never been satisfactorily explained, the sheep interests of this state do not come to the state fair in numbers.

Throughout the entire livestock department there was evidenced a degree of finish that at once lifted the California showing from lists of amateur exhibitors.

The fair just closed served to bring out several needs that must be given early attention if our fair is to continue to go ahead. First of all, it was demonstrated that more accommodations must be provided. This matter of improvements will depend largely upon the interest that the livestock men manifest. The directors are more than willing to do what they can but are handicapped by lack of funds. Money is needed; the only way to get it is through the legislature, and there is reason to hope that with sufficient pressure the legislature will make proper provision. Next to more barn room the great need is for a modern judging pavilion.

The Beef Cattle

The showing staged by the Shorthorn and Hereford breeders left little to be desired and indicated that at last, after a long wait, the beef cattle industry of California is about to get under way on a period of expansion full of promise. For a good many years the beef cattle department attracted few of the breeders and while cattle of excellent quality were shown the classes were small. During the last two years a large number of new Shorthorn and Hereford herds have been established and the show this year reflected the growth of the industry. From now forward it can be expected that California Shorthorns and Herefords will take a prominent place. To those who have attended the fair for a number of years the most striking feature was the splendid showing made by the Hereford breeders. From the small shows of a few years ago the Whitefaces had the distinction of leading their rivals in point of numbers for the first time in the history of the fair.

The Dairy Cattle Show

The showing of dairy cattle was probably the best balanced from start to finish that has ever been seen at the state fair. True, there have been times when a few more outstanding animals have been shown, but the general average has never been better. The Holstein classes brought forward an unusually large list of new exhibitors, and had a few more of the veterans been on hand the show would have taken extremely high rank. The Guernsey breeders were out in force and it was declared that the exhibit was probably the best yet seen at the state fair. The Jersey breeders put on their usual high class show but were compelled to take third place in point of numbers. For the most part the judging met with approval and in nearly every ring the judges commented on the real quality and unusual size of the entries.

The Sheep Show

The show of sheep, which was declared to be the best seen at Sacramento for a number of years, was made up from 16 flocks. There is still room for a greater sheep show at the California state fair, not from the standpoint of quality but in point of numbers. This is a great sheep

Mammoth Dispersal Sale

Rosamaines Rancho, Riverside, Cal.

October 19-20-21, 1920

King Pontiac Netherland Segis 3rd

Sir Ormsby Skylark Rauwerd

Tuesday, October 19—We will sell Rosamaines Rancho in two parcels

235 ACRES—On which the buildings are located, with improvements costing over \$200 per acre at normal costs; 100 acres finest pasture in California with abundant water and shade; 60 acres in fine stand of alfalfa; 40 acres in corn; motor equipped pumping plants; buildings all electric lighted and sewerage; a profit making property suitable for either beef or dairy cattle breeding.

TERMS ON THIS PARCEL: One-third cash, balance in six equal annual payments, interest at 7 per cent payable semi-annually, 2 per cent discount for cash on deferred payments.

397½ ACRES—Adjoining the parcel described above, all under cultivation, first class vineyard—land, or good for grain or orchard. This is an exceptional investment proposition taken either in connection with the balance of the Rancho or separately. TERMS ON THIS PARCEL: One-

half cash, balance in four equal annual payments, seven per cent interest payable semi-annually, two per cent discount for cash on deferred payments.

Following the sale of the Rancho we will sell

50 REGISTERED DUROC-JERSEY HOGS
18 REGISTERED PERCHERON MARES & STALLIONS
1800 WHITE LEGHORN HENS AND PULLETS
A SMALL HERD OF GRADE DAIRY HEIFERS

THE IMPLEMENTS AND EQUIPMENT, including an almost new 12 foot McCormick Combined Harvester; a No. 50 Typhoon Ensilage cutter; a 20 h.p. motor; Osborn grain binder; beet drill; 8 farm wagons; plows, discs, rollers, mowing machines, rakes, harness, chains, lead bars, etc., and a complete acetylene lighting plant.

Wednesday and Thursday, October 20-21

We will disperse the entire high class herd of 150 REGISTERED HOLSTEINS

including the two great herd sires pictured above. This is one of the best collections yet offered in California, and just consider these facts: There are only 12 animals in the entire herd over 4 years old; there are only 7 animals in the entire herd over 6 years old; there are 105 descendants of the twice 34 lb. cow Gerben Abbekerk Maid in the sale; Gerben Abbekerk Maid herself, only nine years old, and seven of her two year old sisters by the same sire are in

the sale; it is the largest herd strong in Ormsby breeding ever offered in the west. Every animal is positively guaranteed to be a breeder; every animal, unless otherwise announced at sale, is tuberculin tested and sold subject to retest by the buyer.

Catalog Free on Request. Management

state and many of the leading flocks of the West are owned here. It remains for the breeders to stage a more representative exhibit.

Bullard Bros., Woodland, took both championships in the Rambouillet classes. Butte City Ranch, Butte City, had the champion Shropshire ram, and Bishop Bros., San Ramon, had the champion ewe. C. Harold Hopkins, owner of the Straloch Farm, Davis, showed the two Hampshire champions. The Corriedale Sheep Company, Hollister, were the only exhibitors of Southdowns, Lincolns and Leicesters. Italian Vineyard Company, Guasti, were the sole exhibitors of Cotswolds. The Spencer Ranch Company, Cranmore, and Eugene C. Tribble, Lodi, showed Romneys. Tribble had the champion ram and the Spencer Company the top ewe.

THE SWINE SHOW AT THE STATE FAIR

By J. P. Bennett

Improvement in the showing made by all breeds was very noticeable in the swine department as compared with any previous year. The swine show has grown to such an extent that the present facilities are entirely inadequate. As each breed was crowded for space the prospects are very bright for a larger and better show next year. The problem that confronts the fair management in caring for such a large number of hogs is a very serious one. It is certain that unless much more space is provided, many who would otherwise show will be forced to stay at home. Overflow quarters had to be provided this year and every pen was filled and many were crowded.

Practically every Duroc entered was exhibited, and if the other breeds had made as near the 100 per cent showing several additional barns would have been necessary.

Taken as a whole, the class of animals shown would compare very favorably with those shown at any state fair in the country. Not only were the breeding classes well represented, but the exhibit of fat barrows was an outstanding feature of the show.

L. A. Weaver, Columbia, Missouri, placed the awards in the Duroc and Poland China departments, and Wilson Rowe, Davenport, Iowa, judged the Berkshires and other breeds, also the fat barrows. Both men rendered very efficient service.

HOLSTEIN EXHIBIT AT L. A. SHOW

Geo. M. Brown of the Burr Farm says: "We expect upward of 150 Holsteins, a display not exceeded in quality and number at any of the great national shows. Fully 100 animals will come from breeders close to Los Angeles.

California is fast becoming a great Holstein center. The reason is plain. Mounting feed costs, due to scarcity of forage producing land here, together with the enormous demand for good milk, makes it absolutely necessary that we dairymen use only high powered cows. The Holstein thrives here. For quantity and quality of milk she is beaten by few breeds. Our slogan now is \$1,000 worth of milk per Holstein cow per year."

With a view to determining the quality of animals to be entered in the livestock show, John L. Smith of the Hazelwood Farm, Spokane, Washington, a recognized Holstein authority and a former judge at Minneapolis and Denver national shows, and judge of Holsteins at this year's California state fair, was a guest last week of Mr. Brown and while here visited all the principal Holstein herds in Los Angeles County. Mr. Smith in a statement says:

"California Holstein herds as a whole are surpassingly fine. The Holsteins here are of surprisingly good quality. We have very fine Holsteins in the Northwest, but Eastern Holsteins are not to be compared with Western, and especially California, animals of this breed. Your local animals should win a large number of prizes at the national shows."

John Kincaid, proprietor of Mayflower Thoroughbred Stock Farm, East Bakersfield, writes that business is good. He has just sold a young Gano boar and a You'll Do gilt at satisfactory prices.

McCARTY--SHINN--ELLIOTT

Big Type Poland-China Sale

Tulare, Cal., Monday, Sept. 27th, 1920

30 Bred Sows and Gilts—15 Open Gilts—5 Boars

SELECTED FROM THE

McCarty Herd---Alex. D. McCarty, Modesto
Fortuna Herd---Hugh C. Shinn, Tulare
Willows Ranch Herd, A. J. Elliott, Tulare

Frazier's Model

The Shinn consignment includes Frazier's Model, one of the best sows ever offered at public auction in the west. Fortuna Wonder, an outstanding daughter of Bridges Bob Wonder and Bridges Bobbie. High Spot and Fortuna Bobbie, 2 senior gilts out of the first prize get of sire at Sacramento. Two spring boars and 2 gilts by The Pilot, Grand Champion at the 1919 National Swine Show.

The McCarty consignment includes Perfect Beauty, 1st prize Jr. yearling sow at Sacramento. Miss Nebraska, by Rood's Choice. Two senior gilts out of the 1920 grand champion sow. Two great gilts by King Jones Over and out of Barbary Coast.

The Elliott consignment includes Lady Orange and Lady Timme sired by Hercules, a sire of champions and out of one of the greatest litters in the state. Long Jones, a big stretchy spring boar, out of the first prize litter at Sacramento. Ten gilts by The Californian and bred to Hercules Jr., one of the largest fall boars ever shown in California.

The Californian

Everything Cholera Immune and All Papers Delivered Sale Day

The McCarty-Shinn and Elliott sale to be held at Tulare September 27 will afford California breeders an opportunity to select from what will no doubt be the greatest lot of strictly big type Poland Chinas ever offered in the West. The offering includes many state fair prize winners and quite a number of real show prospects. The man in need of a good herd boar or sow prospect will find one of the highest class offerings to be sold in the country this year.

J. P. Bennett.

The Westerner

Secure the blood of The Pilot, Hercules, Big Bob, Mac's Big Orange, Big Gerstdale Jones, Giant Bob and many others listed among the most famous boars of the breed.

Redlands, Cal.

Mr. Shorthorn Breeder

Why don't you try growing out a few pure bred Shorthorn steers? Castrate some of your less desirable bulls and give them good care. You will be surprised what good steers they will make—and at the profits they will show. Once you try it you will keep up the practice. Shorthorn steers pay.

Build a Savings Bank in your Barnyard

When you build an Indiana Silo you build a Savings Bank in your barnyard. You can save 40% of corn fodder wastage, 10 to 25% on mill feed, barn space, labor and often field crops spoiled by rain.

An Indiana Silo pays dividends in increased butterfat and beef production, more stock per acre and freedom from pasture worries.

Get the Indiana Silo Facts

If you feed ten head of stock you are paying for a silo whether you own one or not. Indiana Silos have been used for 22 years. Twenty thousand on Pacific Coast farms. Write today for free silo book. Learn the facts.

An Ormsby Sale--45 Registered Holsteins

Allana Farm, Dixon, Cal.
Thursday, September 23, at 10 A.M.

SIR PIETERTJE KORNDYKE ORMSBY

The entire high class herd at Allana Farm sells in this sale, excepting only one heifer and a few heifer calves, the event being necessary to adjust the existing partnership between J. P. and W. W. Phillips.

Sir Pietertje Korndyke Ormsby

For the first time in the west, a son of the world famous Sir Pietertje Ormsby Mercedes will be sold at public sale. He is four years old, a high class individual, a sure breeder, straight and right in every way. A number of his young daughters and sons are in the sale, and their type stamps him as a sire of real worth.

Females of Type and Breeding

Practically all of the females are young, mostly of Ormsby breeding, with good 7 day records up to over 26 lbs. butter in 7 days, a number with good yearly records, others now making splendid yearly records, and those that are bred are in calf to Sir Pietertje Korndyke Ormsby.

A Choice Lot of Young Bulls

The offering of bulls in this sale is particularly valuable, mostly of Ormsby breeding, unusually good individuals, and among them some that are good enough to head herds of registered females.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RE-TEST BY THE BUYER.

NOTE.—Allana Farm is 2 miles northeast of Dixon on the main State Highway between Davis and Dixon.

PURE BRED BULLS FOR GRADES

The Riverside County farm bureau has fired the opening gun in a campaign to eliminate the grade bull from the dairy herds of Riverside County and all Southern California. Briefly, the plan is as follows:

Several breeders have offered pure bred bull calves to be traded for grade sires. The trade will be made on even terms, the former owner of the grade sire becoming the owner of a selected pure bred calf and the owner of the pure bred animal getting the amount which the grade bull brings on the block for beef as his price for the pure bred calf. By trading on this basis the owner of a grade bull becomes the owner of a pure bred bull without any additional cost. He must agree, however, to certain regulations in the contract with the dairy department of the Riverside County farm bureau, which guarantees that he retain the pure bred calf and use him to build up his herd. The object of the campaign is purely to increase the quality of the grade herds. The result will be higher producing herds, and greater profit to the dairyman. For this reason the exchange will be made only to bona fide dairymen.

The farm bureau has taken this matter up with breeders of registered stock and received a very favorable response. The breeders are a very progressive class and are anxious to see the dairy industry in Southern California put on the very best footing. The only way to do this is to introduce pure bred sires into the grade herds.

Little need be said regarding the benefits of using pure bred sires in grade herds. Records of cow testing associations show that practically every herd in the state averaging over 40 pounds butter fat per month is headed by a pure bred sire. Mr. Bahler, official cow tester for Riverside and San Bernardino Counties, makes the statement that every cow in these two counties producing over 300 pounds of butter fat per year was sired by a pure bred sire. There is no argument in favor of the grade bull unless it be to cut down the income tax.

Dairymen interested in this offer should get in touch with John F. Oeborn, assistant farm adviser of Riverside County. Only a limited number of pure bred animals will be exchanged and from present indications there will be many more applications than animals available. The transfer will be made during the Southern California fair.

COST OF 100 POUNDS OF MILK

A two year study of the cost of milk production undertaken cooperatively by the United States dairy division and Purdue University, on a number of dairy farms in northwest Indiana, has resulted in figures on the requirements for producing 100 pounds of milk in winter and in summer. To give permanent value to the results these requirements were determined in pounds of feed, hours of labor, etc., and by substituting present costs and values for the various items a farmer can determine very closely what it is costing him to produce 100 pounds of milk at the present time.

In the summer months the requirements for 100 pounds of milk were as follows: Concentrates, 20 pounds; dry roughage, 27.4 pounds; silage and other succulent roughage, 60.1 pounds; hauling and grinding concentrates, \$0.014; pasture, 0.04 acre; human labor, 2.2 hours; horse labor, 0.2 hour; overhead and other costs, \$0.393.

In the winter months the requirements for production were: Concentrates, 38.6 pounds; dry roughage, 66.8 pounds; silage and other succulent roughage, 147.6 pounds; hauling and grinding concentrates, \$0.03; bedding 20.3 pounds; human labor, 2.5 hours; horse labor, 0.3 hour; overhead and other costs, \$0.385.

It has been generally believed that the cost of producing milk was considerably higher in winter than in summer, and while this holds true as far as the gross cost is concerned, the figures obtained in this investigation show that the net cost of pro-

ducing 100 pounds of milk from November to April was only 1.8 per cent higher than the cost from May to October, inclusive, and that the total cost varied only slightly from month to month within each of these seasons. This small difference between net costs of production during winter and summer is largely due to the greater credit allowed for manure during the winter season.

The price received for the milk, however, fluctuated sharply from month to month.

Further details on requirements for milk production, including such factors as cost of keeping a cow for one year, cost of keeping a bull, proportion of work performed by each class of labor, percentage relation of various factors in the cost of production, and other details, are presented in Department Bulletin 858, Requirements and Cost of Producing Market Milk in Northwestern Indiana, which may be obtained from the United States Department of Agriculture on request.

SUNFLOWERS FOR SILAGE

On the train the other day I met a dairyman of Spokane, Washington. Of course I asked about crops and conditions. "Dry; awfully dry. Much of wheat not harvested, but pastured off." "How about corn for silage; plenty of that?" "No, a failure; but sunflower silage will save the day for us."

I note also in News Notes of our state department of agriculture the following:

"Some time ago a rancher in one of our mountain valleys, who was having more or less trouble in securing a crop suitable for silage, decided to try sunflowers.

"With that end in view a few acres were planted. Before they had reached a stage suitable for this purpose he had run out of green feed and his milk flow was decreasing at an alarming rate. He then decided he would have sufficient late oats and vetch to fill his silo, so he tried feeding the cows green sunflowers. They took to them at once. In fact, care had to be taken to prevent overfeeding. The milk flow came back as good as it had been at any time that year.

"Sunflowers are a regular crop on this ranch now, and it is claimed that they produce an unusual flow of milk. They are fed green, also used in the silo. The amount of this kind of feed produced on a small plot of ground is amazing. No one else has taken it up here, but it seems that it would be a good forage crop in some of our arid valleys."

Shire Horses FOR SIZE

BONE and QUALITY
More is required of horses than ever
before hence the need of more size,
weight and power. Large geldings never
were higher. Shire geldings usually top
the market. Use Shires to raise larger
and better horses.

For information on Shires write,
W. G. Lynch, Secretary American Shire Horse
Association, Tonic, Illinois.

106 Registered Shorthorns

77 Females---29 Bulls

WILLOTTA RANCH

Owned by William Pierce

Suisun, California

Thursday, September 30, 1920

The females in this offering are a good, useful lot of breeding cattle
that have been handled strictly under range conditions, representing
many years of careful selection of regular breeders and the heavy milkers
that produce and develop well grown, rugged calves. A large number
of the females are granddaughters of the famous Glide bull KING
EDWARD.

Over 30 Cows with Calves at Foot

Besides the females there will be 29 bulls in the offering, a large
percentage of them ready for service. They are all reds, out of the
selected dams in the herd, and ready to go out and work improvement
in range herds.

Write for catalog.

For Sale—46 Acre Alfalfa Ranch, good as any in state. Part cash, balance 5 years. Ranch will pay out in five years as dairy. Will sell 60 to 75 tons alfalfa hay with ranch. You must see this place to appreciate it. Full set buildings on ranch. If interested call or write. **John Salaberry**, Chowchilla, California.

Alpaugh Farm Lands—Any quantity. Grows grain, alfalfa, or cotton. Good dairy and poultry country. Excellent water conditions. **W. A. Settle**, Real Estate, Alpaugh, California.

For Sale—Ranches, Homes, Acres; free list. **Wilson Bros.**, Santa Cruz, California.

Irrigated Alfalfa Ranches for sale. Other crops, plenty water. **C. I. Graves**, Fallon, Nevada.

Bishop Land Co. can furnish from 5 to 1200 acres of the best land in the Valley. Address **Bishop**, California.

Fifteen Acres Best Pear Land, half pears and prunes. \$400.00 per acre. **Box 328, Lakeport**, California.

Irrigated Farms—Five acres and up. **Alex. Murdock**, Brentwood, California.

MACHINERY

FOR SALE—WILL SELL THE FOLLOWING IMPLEMENTS AT BARGAIN PRICES TO MAKE WAY FOR FALL PRODUCTION. THEY ARE LATE MODELS, CLEAN AND BRIGHT.

- 2 Heavy duty 4 disc plows
- 3 S-R Tractor disc plows
- 1 Four disc stump-jump plow
- 2 Deep tilling machines (16 to 18 in. deep)
- 1 Cunningham pulverizer (6'x18" diam.)
- 1 Cunningham pulverizer (6'x24" diam.)
- 1 California land roller 8 foot
- 1 Hop and Vineyard disc plow
- 1 Set stump-jump harrows
- 6 Ridging and furrowing plows
- 10 Four foot disc harrows
- 6 Sets steel drag harrows for Fordsons
- 1 Rotary harrow 6 ft (700 lbs.) for tractor
- 1 Johnson Road Scarifier
- 1 Disc Cultivator and Weeder, Fordson size (for killing morning glories, etc.)

Eveners—Doubletrees—Neck yokes—½-in. Cables for attaching implements to tractors. Call or write for circulars.

"RED TOP" STEEL FENCE POSTS

America's Foremost Fence Post

The "Red Top" Steel Fence Posts have earned the right to be known as the world's foremost fence post.

Millions of these permanent steel fence posts have been installed on Government property, along the right-of-ways of leading railroads and on thousands of America's best farms.

The "Red Top" has answered the every requirement of the three general classes of post users. It has given continuous satisfactory service under most adverse conditions and in each case it has made good.

Natural enough that today it is recognized as the world's standard fence post.

Know this superior steel fence post. Identify it by the "RED TOP."

"Red Top" Fence Posts drive like a stake—Anchor like a rock—no concrete used for line posts.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Planting Thompson Seedless

Will you please give me some information through your valuable paper in regard to Thompson Seedless grapes. About what time is the best to plant? What is the best intercrop and how many years can one raise intercrop without damaging vines? How soon after putting out can one get crop? About how much will it cost to harvest grapes? Any other information will be appreciated.—J. L., Manteca.

Thompson grapes may be planted during late February and March. Preference should be given to the later dates provided the vines can be kept dormant. In other words, the planting should be scheduled so the vines will start within a very short time after they are placed in the ground. Inter-cropping in young vineyards is not to be recommended as a general practice, except perhaps where such crops as long staple cotton can be successfully grown. With such a crop the money return will as a rule offset the fertility removed from the soil. If marketing conditions warrant legumes may sometimes be of value as an intercrop and are a benefit rather than a detriment to the soil, but if the crop cannot be marketed profitably it would be better to sow a legume crop which can be plowed under as green manure. Nothing except cover crops should be grown in the young vineyard after the first year. With proper growing conditions and care you may expect some crop from Thompsons the third year. The cost of harvesting varies somewhat with the tonnage produced. On the average the cost in 1919 was between \$25 and \$30 per dry ton.—F. K. H.

Drying Prunes In Sun

Will you please give instructions for drying prunes in the sun?—Subscriber, Owensmouth.

The following directions are sent out by the state university, as given by R. Schmidt:

Prunes ripen and drop from the tree naturally. They call for three pickings during harvest. Toward the close of the season the remaining fruits may be brought down by lightly shaking the trees. Experienced growers grade their prunes into three sizes. The fruit is placed in a wire basket and dipped for a few seconds in a solution of lye (one pound to 30 gallons of water), held at the boiling point. Shake basket sharply so fruits will shift position and be wet on all sides. Dipping the prunes causes a slight checking or cracking of the skin near the stem end, which facilitates drying. If the lye is too strong or immersion too long, the skin may peel off. After dipping the prunes are spread in a single layer upon trays and dried in the sun. They may dry unevenly. In the cool of the day the properly dried fruits may be removed. Prunes are dry when they are leathery to the touch but not hard enough to rattle against the tray. When too dry they may be dipped momentarily into boiling water and piled in bins or on a clean floor while still damp. The moisture is soon equalized. It is well to turn them over with a shovel a few times.

PROFITEERING

Butcher—"This meat is just a little over two pounds, madam."

The CHEMIST says— "genuine GIANT is always uniform"

At every Giant Powder plant the chemical laboratory controls the processes of manufacture. They make continuous tests that insure the unvarying high quality of Giant Powders. Each pound of Giant Powder is exactly like every other pound of the same grade. Such uniformity means economy, efficiency, safety. Professional users of Giant Powders—miners, quarrymen, contractors—all know that the name "Giant" stands for utmost dependability in explosives. When you have land to clear, trees to plant, subsoil to be broken or ditches to be blasted, tell your dealer to get for you one of the Giant Farm Powders—Eureka Stumping or Giant Stumping. Don't accept any ordinary dynamite, but insist on genuine Giant Powder, bearing the Giant trade mark on every box.

A postal will bring you our book, "Better Farming with Giant Farm Powders." Its 52 pages are full of short-cuts and labor-saving methods.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department. Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Difficulty With Real Estate Agent

I placed my ranch in South Dakota with a real estate agent to sell at a certain price. He procured a purchaser and notified me. I telegraphed that the price was acceptable providing the terms and commission were satisfactory to me. He forwarded the contract for the deed and I found the terms absurdly unsatisfactory and refused to complete the sale. The agent afterwards offered to let me make my own terms. Can the agent or the purchaser enforce a claim for damages based upon my telegram? Would I have a claim against my agent for concealing from me the land values in that locality and also the real offer of the purchaser?—Subscriber, Pomona.

It is apparent in this case a very vital element of the contract was not settled; that is to say, the terms upon which the land should be sold. Until those terms were settled definitely there was no contract. The second offer to allow you to make your own terms was rejected by you, in which you were within your rights. From the statement of the case it would seem that no action for damages would lie, but in order to be assured upon the matter you should take all of the correspondence and state the whole facts of the case to an attorney. It is the duty of an agent to act solely for his principal and to deal openly and fairly with that principal. He may be compelled to account to his principal for all profits, advantages, rights or privileges acquired in his dealings in excess of his lawful compensation and to transfer such excess to his principal, even though the principal suffered no injury by reason of the agent's dealing. The agent is deemed to hold all secret commissions or profits as the trustee of the principal, nor is he permitted to act as the agent of the other party to the dealing, unless with the express consent of his first principal. The agent is also required to notify his principal of every material fact concerning the subject matter of his agency, which comes to his knowledge. Whether the agent in this case would be required to inform you of the prevalence of higher prices for land would rest very largely upon the terms of the authority which you gave to him. Good faith would, of course, immediately suggest that the agent inform you. Certainly, any difference which he would receive from the amount which you were paid and the amount which the purchaser paid he would be required to remit to you, with the exception of his reasonable commission.

Produce License

Can a producer sell his crops from house to house without a license within the limits of an incorporated city?—Subscriber, Van Nuys.

There is no state or general law requiring such a license. Frequently, however, incorporated cities, and sometimes counties, require such license both for purposes of inspection and for police purposes.

Undelivered Deed

If I make deed of my real and personal property and properly acknowledge it, but instead of delivering, or recording it, place it in my safe deposit box for delivery to my wife after death, will this be a legal and valid conveyance?—Subscriber, Pomona.

It is essential to any deed or con-

veyance of real property that it be delivered to the grantee, and as long as such conveyance remains within the control of the grantor it is invalid. If the foregoing method was adopted, your property would follow the usual course of administration and be distributed as the law provides in case no will is left.

Open Account

How long does an open account run before it outlaws in California?—Subscriber, Princeton.

An action upon any contract, obligation or liability founded upon an instrument in writing, or an action to recover upon a book account, whether consisting of one or more entries, upon an account stated, upon a balance due, upon mutual, open and current account, may be brought at any time within four years, provided, however, that where an account stated is based upon an account of one item the time shall begin to run from the date of said item and where account stated is based upon an account of more than one item, the time shall begin to run from the date of the last item.

Unfulfilled Contract

Land is leased on shares for raising cotton. Under the written contract the landlord agrees to furnish ample water to irrigate all crops and sufficient teams and tools for the working thereof. He has done neither. Lessees have done their best to raise a crop but nearly two-thirds of the cotton is a loss. The landlord has his part of the cotton mortgaged. Can an attachment be run on the landlord's portion of the cotton for the loss occasioned these lessees by his breach of contract?—Subscriber, Spa.

If the landlord is a non-resident of the state, it is probable that if the complaint is properly drawn an attachment might issue against the real property, but in so far as the interest of a bona fide mortgagee is concerned, it will be necessary to indemnify the sheriff by an undertaking in double the value of the mortgage or deposit sufficient money to pay off the mortgage. It is exceedingly doubtful that an attachment would lie for breach of contract, as this is for an unliquidated sum of damages, if the defendant was a resident of this state, but it would seem that sufficient other remedies could be adopted upon taking the matter up with your local attorney so that you could be entirely protected.

Inspection of Livestock

Is there any law which requires the inspection of livestock shipped by express from one county to another in this state? If such law applies to cattle, does it also apply to pigs, goats and sheep?—Subscriber, Escondido.

The law creating the cattle protection board prescribes that it shall be the duty of the inspectors of the board to inspect all cattle for marks and brands, which are offered for transportation to any common carrier at the loading stations thereof. It defines the term cattle as every kind of animal of the bovine species. This seems to be the only provision in respect to the matter in question.

HOW TO FIND THE CAPACITY OF A CORN CRIB IN BUSHELS

Do you know how much corn is left in your crib or how many bushels a given space will contain? If you know the rules for estimating quantities of stored grain, the problem is simple.

In estimating the number of bushels of corn in a crib find the number of cubic feet in the pile of ear corn and divide this product by 2½. The result thus obtained represents the number of bushels of shelled corn in the pile of ears and is a fair approximation for

Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double

sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6, 7 and 8.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order.

CORN HARVESTER

One man, one horse, one row. Self Gathering. Equal to a Corn Binder. Sold direct to Farmers for 22 yrs. Only \$28 with fodder binder. Free Catalog showing pictures of Harvester. PROCESS CORN HARVESTER CO., Galena, Ky.

When writing advertisers, mention the Cultivator.

well settled ear corn of good quality. However, if the corn is of poor quality a higher factor should be used, say $2\frac{3}{4}$ or $2\frac{1}{2}$.

A standard bushel contains 2,150.42 cubic inches, or nearly $1\frac{1}{4}$ cubic feet. This is a bushel by measure of shelled corn or of other grain. A bushel of corn on the ear varies widely in volume and may occupy more or considerably less than twice the space occupied by a bushel of shelled corn. On the average, $2\frac{3}{4}$ cubic feet of good, sound ear corn will make a bushel of shelled corn.

If the crib is wider at the top than at the bottom, find the average width by adding together the width at the bottom and at the top of the corn and dividing by 2. Then multiply this average width by the height and length to find the cubic contents and divide by $2\frac{3}{4}$ to find the number of bushels of corn in the crib.

The cubic contents of a round crib are found by multiplying together the area of the base and the height of the crib. The area of the base is found by the formula used for finding the area of a circle; that is, by multiplying the diameter by itself, and this product by .7854. Then multiply by the height. Divide by $2\frac{3}{4}$ as before, and you have the number of bushels of shelled corn.

In buying or selling ear corn by weight, which is the general practice, it is customary to allow 70 pounds of air dried ear corn to the bushel. This quantity of ear corn will give about 56 pounds of shelled corn (or an even bushel, or 2,150.42 cubic inches) and 14 pounds of cobs. There is some variation due to difference in percentage of grain to cob and to the weight of a measured bushel of shelled corn.

To estimate the number of bushels in a bin of shelled corn, multiply together the length, breadth and height in feet of the pile of corn, and divide by $1\frac{1}{4}$. If the dimensions are in inches, multiply together the length, breadth and height and divide by 2,150. This same rule can be used for measuring or estimating the number of bushels of other grain, as wheat, rye, oats, etc. The contents of a round or cylindrical bin is found by multiplying the area of the base by the height, as directed for finding the contents of a round crib. The cubic feet of shelled corn are then converted into bushels by dividing by $1\frac{1}{4}$.

WORK AND YOU WORK ALONE

Strike and the world strikes with you, work and you work alone. Our souls are ablaze with a Bolshevik craze, the wildest that ever was known. Groan and there'll be a chorus, smile and you make no hit; for we've grown long hair and we preach despair, and throw a daily fit. Spend and the gang will cheer you, save and you have no friend; for we throw our bucks at the birds and ducks and borrow from all who'll lend. Knock and you'll be a winner, boost and you'll be a frost; for the old sane ways of pre-war days are now from the program lost. Strike and the world strikes with you, work and you work alone; for we'd rather yell and raise blue hell than strive for an honest bone. Rant and you are a leader, toil and you are a nut; 'twas a bitter day when we pulled away from the old time workaday rut. Wait and there'll be a blowup, watch and you'll see a slump, and the fads and crimes of these crazy times will go to the nation's dump.—New York Sun.

100 BUSHELS AN ACRE

Stimulated by the success of members of the 100 Bushel Corn Club of Ohio, several hundred Buckeye farmers are trying this year to raise an average of 100 or more bushels of corn per acre on ten acres. Yields are reduced to a uniform moisture content and are determined by crop specialists of the Ohio state university, which conducts the contest. The enrollment this season is said to be 50 per cent larger than in any previous year and includes many of the topnotch farmers in 27 counties from which entries have been received.

From April 1 to June 30 of the present year we imported from the Isle of Pines 13,326 crates of pomelos. In the corresponding period of 1919 we imported but 8,140 crates and but 45 crates of oranges. This year we imported no oranges during the period noted, but we greatly increased our vegetable imports, running up to 13,405 crates, valued at \$27,194.

FAGEOL

WALKING TRACTOR

This tractor delivers its power direct to both wheels for pulling, and all the power to one wheel for turning. The use of a separate clutch on each wheel with a live axle, permits it to make short turns.

It works equally well in loose sand and light or muddy soils, its wedge-shaped grousers getting positive traction and quitting the soil without lifting it or allowing the tractor weight to pack it.

KARDELL "UTILITY" TRACTOR

SEE IT AT THE TRACTOR SHOW

You Will Be Interested in the New Features

We call your attention to the new Kardell Special Heavy Duty, Four-Cylinder Tractor Motor, having an S. A. E. rating of 41 horsepower to supplant the 25.6 horsepower engine formerly employed, thus raising the Kardell "Utility" Tractor from the class of 10-20 tractors to the 12-25 tractor class with but slight increase in weight or size and without the loss of any of its advantages of extreme simplicity or the sacrifice of its all-purpose features.

The Kardell "Utility" Tractor stands today far in advance of nearest competitors from the vital considerations of increased horsepower, accessibility to working parts and general adaptability to the all-purpose uses for which the Kardell was specially designed.

No. 1 veals, 16@18; No. 2, 14½@16½; G. S. No. 1 grasser or fall, 15@17; No. 2, 13½@15½; G. S. No. 1 runner, 13@15; No. 2, 11½@13½; dry flint skins, 25@35; dry salted skins, 19@29.

POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, Sept. 14, by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk. There may be slight fluctuations during the day's trading.

Potatoes: Supplies heavy, market steady. Local: Early and White Rose, fancy No. 1's, mostly 1.00 and 1.25 per lug; 100 lbs. sacked No. 1's, mostly 2.50. Stocktons: Burbanks, quality, generally poor, 3.00@3.25 sacked. Sweet potatoes, lug, 1.50@1.75.

Onions: Local White and Yellow, lug, 75@1.00; 1.50@2.00 per 100 lbs. sacked. Stocktons: Whites and Yellows 75@1.00 per lug; 1.50@2.00 per 100 lbs. sacked. Stocktons: Whites, 2.40@2.75; Browns mostly 2.00 per lb. sacked.

Garlic, lb., 12@15; Mex., 17@18.

VEGETABLES

These are the actual prices obtained Sept. 14 by the Los Angeles wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Beans: Ky. Wonder, 11@12; Limas, 10@11.

Beets: Doz., 35@45.

Cabbage: Supplies moderate, market steady, movement good, wide range in quality. Best mostly 3 per lb.; per field crate, best 2.50@3.00.

Carrots: Doz., 35@45.

Celery: Doz. bunches, 1.00@1.35.

Corn: Local, best 1.35@1.50 per box.

Cucumbers: Market steady; local, best, lug, 60@75.

Egg Plant: Lb., 4@6.

Lettuce: Field crs., 1.25@1.50.

Peppers: Bells and Chills, lb., 4@5.

Squash: Local summer, lugs 85@1.25; Hubbard, lug, 3.00@3.50.

Tomatoes: Local lugs, best mostly, 50@

61.

Turnips: Per doz., 35@50.

DECIDUOUS FRUITS

These are the actual prices obtained Sept. 14 by the Los Angeles wholesalers in sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk.

Apples: Supplies liberal. Bushel boxes: Bellefleurs, 1.75@1.85. Local: Various varieties, 85@1.25 per lug; crabapples, lug, 1.00@1.25; few, 1.50.

Bananas: lb., 11@12.

Cantaloupes and Melons: Cantaloupes —Market steady, supplies liberal, quality and condition wide range. Local: Tiptop and Paul Rose, pink meats, standard crates, best 1.00@1.35. Watermelons, lb., ¼@1½.

Figs: Bx., 1.25@1.50.

Grapes: Muscats, Malagas and Hamburg, 6@7; Tokays, 10; Cornichon and Concord, 2.25 per 4 basket cr.

Peaches: Local, best, lug, 2.00@2.75.

Plums: Lb., 5@8.

Pears: Bartlett's, best, lb., local, mostly 6; Northern mostly 7@8.

CITRUS FRUITS

Grapefruit: California, per box, market pack, 3.00@3.25; special packed brands, 3.75@4.25.

Lemons: Market dull, wide range in prices. Local stock: Packed, 3.00@3.50; loose, 1.25@1.75; lug, mostly 75.

Oranges: Supplies moderate, market strong. Valencias: Packed special brands, 126's, 150's and 176's, 7.75@8.25. Local packed, second grade, 4.00@4.50.

HONEY

U. S. bureau of markets: Movement limited, market unsettled, prices slightly lower account slump sugar market and financial stringency. Carloads f.o.b. usual terms: White Sage Orange, 18½@20. Extra light amber sage, 17½. Light amber sage, 16; light amber alfalfa, 15@17½; Beeswax: 38@44.

BEANS

California Lima Bean Growers, September 3:

The situation has not changed materially during the past few weeks, except that somewhat lower quotations have prevailed apparently due to attempted pressure of selling against depression caused by heavy decline in sugar and coffee. The generally current immediate shipment quotations on regular

Limas range around \$10.50 coast, with the market very quiet. Harvesting is now getting nicely under way and the first threshing machines are commencing to move out into the early districts. The yields cannot be determined with any accuracy until threshing has been in progress for a few days so that some averages can be secured.

GRAIN AND FEEDS

Grain Exch. prices bid Sept. 14:
Barley: Carlots, on track, 2.15@2.17½.
Bran: Kansas, 51.00.
Milo: Carlots, 3.07½@3.17½; No. 3 Eastern Milo, blk., 2.75.
Corn: Bk, Yellow, No. 2, 2.95.
Kafir, Eastern, No. 2, 2.71½.

HAY

Alfalfa Growers of California, September 15:

In the southern part of the state the yield of alfalfa is in most parts better than last year; in the northern smaller. Acreage planted this year smaller than acreage plowed up. Total production of state probably smaller than last year when it was materially below normal. According to the last government report this year's alfalfa production in the state is the smallest in over ten years. Unsold stock larger than last year in the southern part of the state, and about the same in the northern. Stocks in hands of dealers and consumers are probably on the whole much lighter than at this time last year, mainly owing to the tightness of money and credit. The conclusion would seem to be that a continued healthy demand for alfalfa is assured for the balance of the crop year. Shipments insignificant. An outstanding feature is that the demand for the choice grades of hay is increasing all the time, far exceeding the supply, while the demand for the coarse and common grades has decreased, with the result that the range of prices between the different grades is widening steadily. There were approximately 1,200 tons of hay of all kinds received on the Los Angeles tracks the week ending September 11 and 500 tons held over as against 700 tons the week before.

Fancy dairy 39.00
No. 1 dairy alfalfa 33.00
Standard Dairy 29.00
Stock alfalfa 25.00Accessibility
Counts

There's nothing that gives an owner as much satisfaction as to feel that he is master of his tractor.

This is one of the secrets of Hart-Parr 30's prestige among its owners. It is built for the farmer, not the mechanic.

In less than five minutes you can get at any working part of the Hart-Parr 30, and adjust it standing on your feet, not lying on your back.

Fuel Service Wagons

THE

TRACTOR
TENDER

Makes Fuel Transportation to Any Part of the Field Easy

Saves Time and Labor—Increases Profits

PREVENTS WASTE

You can't lose a drop of fuel with the TRACTOR TENDER when replenishing the fuel supply in your tractor. The tilting lever moves the barrels to any position for drawing fuel. Ratchet locks the barrel in place at any angle. No struggling with heavy barrels—no lifting. One hand does it quickly and easily. No fuel spilled on the ground or wasted. Just a brief halt to fill up the tank and your tractor is working again.

Barley: New feed, 2.30@2.60; shipping, 2.45@2.50.

HAY

Alfalfa Growers of California under date of September 15:

There were 2032 tons received in San Francisco the week ending September 11. We are selling hay for approximately as follows:

No. 1 Dairy Alfalfa 29.00
Standard Dairy 26.00
Stock Hay 24.00
Under date of September 11, A. W. Scott Co. says:

Receipts past week, 2632 tons. Last week, 2256 tons. These heavy receipts, together with two holidays during the last week, have overstocked the market on business days. This naturally has a tendency to lower prices. Reports of the trading through the interior of the state are of small movement and light trade.

Transportation continues very fair and is handling practically all hay offered throughout Central California. Export shipment lighter than normal. Alfalfa continues in slightly better demand for California stock than any other grade of hay, although alfalfa prices feel the effect of the general market depression and are somewhat lower both in the country and in the city markets. Straw has been a negligible quantity, but reports of a few sales for stock feed have come in from country sections.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market in San Francisco (for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions).

Per Ton
Wheat Hay, fancy 26.00@28.00
Wheat Hay (light 5-wire bales) 23.00@25.00
Tame Oat Hay 23.00@25.00
Wild Oat Hay 17.00@19.00
Barley Hay 17.00@20.00
Alfalfa Hay (latter cuttings) 21.00@25.00

The office of the district forest supervisor has been changed from Bakersfield to Porterville.

Citrus Markets

Los Angeles, September 15.

The auctions are showing materially lower prices and a rather easier tone prevails in all Valencia markets. There are now less than 1,000 cars remaining, so the present situation concerns but slightly the citrus interests. Florida estimates 16,000,000 box output, 1920-21.

Grapefruit is showing more of its commercial importance than in any former season; between 30 and 40 cars yet remains for shipping.

Lemon market still flat with red ink sales reported almost every week.

Shipments

Shipments of oranges to date from Southern California since November 1, 1919, 28,498 cars; lemons, 7,593; total, 36,091. Same date last season: Oranges, 31,840; lemons, 8,987; total, 40,827. From Central California to date this season: Oranges, 5,375; lemons, 288; total, 5,663. To same date last season: Oranges, 3,714; lemons, 251; total 3,965. Northern Cali-

Save Money—Buy Pipe From Us

Farmers, Miners, Builders—people in every kind of business are saving money buying used or renewed pipe from us. We sell every kind of pipe. Send in a list of your requirements today and get our prices. We have saved hundreds of people 33 1-3 to 50% on their pipe bills. Here's a partial list of some of the miles of pipe we have in stock for immediate delivery:

8000 ft. 6-Inch Riveted 16 gauge
700 ft. 8-Inch Riveted 16 gauge
5000 ft. 12-Inch Riveted 12 gauge
1000 ft. 18-Inch Riveted 12 gauge
800 ft. 22-Inch Riveted 14 gauge
300 ft. 24-Inch Riveted 14 gauge
500 ft. 36-Inch Riveted 12 gauge
10,000 feet light wrought iron 8-Inch pipe with cast iron collars.

All above pipe thoroughly overhauled and inspected and ready for immediate use.

We also have large quantity standard pipe and screw casing, pressure tested and guaranteed.

Don't delay—write for our prices on your pipe requirements today.

Power in ALL Four Wheels

That means more Traction and less wasted Power. We can prove that, for the same horsepower, the FITCH FOUR DRIVE is the most economical tractor you can buy.

Gears all enclosed—immediate change to pulley easily made—built of best materials—strong and simple—burns kerosene or gaso-

line—has a front draw-bar hitch, which increases the traction with the load pulled.

There are real reasons why a FITCH FOUR DRIVE Tractor is the logical one to buy. Come to our exhibit at Glendale. Then, if you are interested, we'll demonstrate for you on your own farm or ranch.

Metal Combs

An inquirer writing to the American Bee Journal and asking as to metal combs is answered by Editor Dandant in effect: "Try 'em and observe results." However, more at length, the editor says:

"It is not our custom to say anything in the reading columns about patented articles which are advertised. But in this case there seems to be a universal interest that requires a statement.

"It will take time to test these combs in a satisfactory manner, but we can point out the probable advantages and defects.

"A metal base in comb was invented long ago. A beekeeper of Toledo, Ohio, whose name is not now available, sent to us some 40 years ago two sheets of foundation made of tin-foil dipped in wax and laminated to give them the print of the cells. Those two sheets were put by us into a hive and forgotten. We have never seen them since. Evidently the bees built comb upon them so that it would have been necessary to mark them to

recognize them further. So we know that bees will work on metal if it is slightly coated with beeswax. But we have never thought of any advantage in this kind of foundation, for it would cost more than the other, and, with a little care, we can secure perfect combs with all wax.

"As to the full metal comb, we can see a big advantage in its being able to withstand the extreme heat and the weight of the bees, if the swarm accepts it. We can also see a large saving of beeswax and the avoiding of any drone comb, where it is supplied.

"Other advantages are the possibility of hoiling diseases of the brood, as well as moths, out of it. Whether the hoiling out of the bees' cocoons in very old combs is possible too is an open question which only long practice will solve. Moths will probably not work on them much as only the small larvae of this pest could worm their way through the interstices that exist from one cell to another in the metal comb. But they would riddle

them enough to make the hoiling out advisable.

"The disadvantages are, first of all, the high cost. If you render the wax of the combs of a colony and send that wax to a foundation factory you can have the entire set of foundation for that colony for about the price of one metal comb added to the value of that wax.

"Possibly disadvantages lie in the great conductivity of the metal for heat and cold. In a country where the temperature is constantly warm, as California or Texas, this objection has but little weight. But we are told by a beekeeper of Montana, and also by one of California, that brood has been chilled to death in these metal combs in cool nights. This requires further and protracted tests.

"The last disadvantage lies in the possibility of damage to the metal comb. A wax comb, if damaged by accident in extracting, transporting, mice gnawing, or otherwise, will be readily repaired by the bees; but a metal comb, once damaged, is wasted. Neither is it necessary that the entire comb be damaged to make it worthless. Who would want to keep in a hive one or more combs in which say ten per cent of the cells could not be

used either for brood or honey? We have before our eyes one of these combs, damaged on one side beyond repair by mice that gnawed it to eat the honey it contained.

"After two or three years of experience with these metal combs on a fairly good scale beekeepers will be better able to pass judgment upon them. Try them yourself.

"When we think the matter over, we wonder whether some material exists that might be molded into cells, which would be of a non-conducting material and could be repaired easily when damaged to large or small extent. Reviewing the different ingredients of human ingenuity and of natural origin, we find one that answers the purpose well—beeswax."

PROTECT YOUR GRAIN FROM RATS, FIRE AND THIEVES

There are many progressive farmers throughout California who are greatly increasing their net profits by protecting their grain from squirrels, rats and mice, fire, rain and thieves. The old style jute sacks permit serious wastes of time and grain in filling and sewing. They get torn and broken and have holes gnawed in them. When they are rehandled the grain is scattered and wasted. Conservative estimates of the loss of grain in sack handling from the field to the mill are in the neighborhood of ten per cent. Similar estimates place the waste in bulk handling at one or two per cent.

A metal bin, properly designed and constructed for farm storage, moisture proof and rat proof, wholly prevents rodents from attacking the grain. When losses incurred through gnawed and broken sacks and the heavy cost of the sacks themselves are taken into consideration, the expense of such a bin is almost negligible. In fact it often pays for itself the first season.

Again, there is the loss of time and money required for the sacking operation as performed in the field. This is eliminated when metal grain bins are used, the grain being loaded directly from the harvester into grain wagons. A hopper is placed under the grain discharge of the harvester, the grain wagon is backed under the hopper and filled by gravity flow through a spout attached to the hopper. The wagon is then driven directly to the farm grain bin.

In various sections of California farmers are clubbing together and building grain loading stations at the railroad sidings. The cost of bulk handling is about one-fourth that of handling in bags, according to the crop technologist in charge of grain standardization, United States bureau of plant industry.

HEALTH CENTERS

The American Red Cross, relieved of the strenuous work of the war and the first few months following its close, is now extending its activities to rural districts where it has organized health associations and is encouraging ethical and physical progress. It writes:

"The American Red Cross has definitely decided upon health service as its principal peace time activity. In line with the league of Red Cross societies, it has adopted the following health service program: To stimulate and maintain interest in public health work. To support, and, if need be, supplement the work of government agencies. To disseminate useful knowledge concerning health through demonstrations, education and otherwise.

"The American Red Cross has decided that it can best carry out this health service program through the medium of the health center. This decision was arrived at largely upon recommendations of leading health experts in the United States. The organization takes a general practical interest in the problems of disease prevention and health preservation as a whole. It is not exclusively in combating any one disease. It does not center its attention on any one group of people. It desires to be of practical and effective service to all the people and to all the health interests of any community. It is ready to act only in response to the demands of the social sense of any community."

Hercules Engines

ANNOUNCEMENT:—Anticipating your needs we entered our orders early and have just received several car loads of Hercules Engines. For the first time in nearly two years our line of sizes is complete and we will be able to make immediate shipments for a brief period only. Our advice is—Buy now!

SMITH-BOOTH-USHER CO.

Pumps - Engines - Motors - Supplies

LOS ANGELES: 228-238 Central Ave.

SAN FRANCISCO: 50-60 Fremont St.

-keep down the up-keep with VENTURA TRACTOR OIL

YOUR tractor is always working under a heavy load. It plugs along, hour after hour, sizzling hot and surrounded by dust.

The engine needs the best oil you can get to lubricate it under these difficult conditions. You can depend upon "Ventura" Tractor Oil to give real service. "Ventura" is a paraffin-base oil—resists heat and clings to the hot, working parts, preventing friction and wear. That's why it's cheaper.

We make barrel deliveries anywhere. Write for prices and free lubrication chart.

VENTURA REFINING COMPANY
Los Angeles, Calif. Branch at Colton, Calif.

PARAFFIN-BASE OIL

THE SOUTHERN CALIFORNIA FAIR

The Southern California Fair at Riverside continues to grow in popularity among breeders and exhibitors generally. The reason undoubtedly is that it is in very truth a "Farmers' Fair." The president of the farm bureau of Riverside County, who is a well known breeder and exhibitor, is president of the fair. The farm bureaus of adjoining counties are interested. Last year the educational demonstrations conducted at this fair gained state wide and even nation wide publicity. This year another step in realistic demonstration will be taken. The agricultural and horticultural display this fall promises to excel even that of last year. A number of counties will enter in competition in displaying their products and Riverside County, which is not permitted to compete for the county prizes, will be shown in numerous community exhibits.

The livestock show will be the largest in the eight years history of the fair. The livestock buildings, which were doubled in capacity last year, have been equally enlarged this year. The exhibit of dairy cattle reflects the steady growth of this industry in the south, with splendid representation from the leading dairy herds of the state.

The swine display is another strong feature of this fair. Exhibitors find that the crowds which visit the show pens are made up very largely of real farmers and stockmen, men who are judges of livestock and vitally interested in what they are looking at. For several years Riverside has staged one of the leading swine shows in the state, and this year the best herds on the coast will be represented by their best individuals.

Other departments of the fair will also be strongly featured. For instance, the display of milk goats last year was the largest ever shown anywhere. This fall the goat display will be much larger than last year and will doubtless maintain its lead as the largest goat show. Poultry has also always been a strong feature and the show this fall will be put on under direction of one of the best poultry showmen in the state. The show will include a fine exhibit of pigeons and bantams.

The racing program is a strong one. There will be six days of racing and the speediest horses on the coast will be in the going.

NATIONAL GRANGE ANNUAL

Committees have been named for the work of the 54th annual session of the National Grange, which is to be held at Boston, Massachusetts, November 10. The chairmen of the more important committees are the following state masters:

Agriculture, John A. McSparran, Pennsylvania; cooperation, L. J. Taher, Ohio; education, C. E. Spence, Oregon; foreign relations, G. W. Dixon, South Dakota; forestry and conservation, Herman Ihde, Wisconsin; highways, W. H. Havens, New Jersey; home economics, Mrs. Cora E. Ketcham, Michigan; insurance, William Bouck, Washington; peace, Mrs. Pearl Stillwell, Wyoming; postal improvement, John Morris, Colorado; pure foods, S. B. Steere, Rhode Island; taxation, T. C. Atkeson, West Virginia; transportation, C. O. Raine, Missouri.

Few persons outside of the Grange and not all within the order, understand the machinery of the National Grange session. It is a legislative proceeding, conducted on the same general lines as the United States congress. Every matter introduced is in resolution form, must be referred to the appropriate committee, where it is given a fair hearing, careful attention, and a majority disposition. After this it is reported back to the whole body, with opportunity for discussion, and receives a majority disposition there. From a ten days session of this kind comes the National Grange legislative program and the plans and policies for the ensuing year's work of this great farmers fraternity.

The pear crop of Lake County is light this year. However, many orchards are just coming into bearing, hence the crop will probably be as large as usual. Picking began about August 15.

A NEW CLOVER

A recent New South Wales agricultural bulletin gives the following boost to a new clover found in that part of Australia, known as Shearman's clover.

"A clover that will hold its own with paspalum, that will carry four to five head of stock per acre during its growing season, that is eaten so greedily as to cause bloating in half an hour, that will outstrip any clover yet known in vigor of growth on wet soils, that appears to be equally palatable at any stage of its growth—such is a description which may fairly be applied to a new fodder plant recently brought to light."

J. H. Shearman found a spreading patch near a water ditch, and says: "It soon grew along the drain for a distance of 20 feet and blocked the water from running. The clover had then to be shoveled out, and I put it in a grazing paddock, where I fully expected that the cattle, by continuously eating it down, would kill it. To my surprise, however, it grew and spread, killing out most of the other

grasses as it ran over the ground. This process took about ten years before I discovered that I had a clover really worth caring for. I then began to plant it as fast as possible, and at present have about 12 acres fully covered and growing beautifully.

"I am now able to make a fine lot of hay each year of exceptionally good quality. The clover grows so vigorously when the land is dry that, without any exaggeration whatever, it is capable of grazing four to five head of cattle per acre during the summer months. Of course, I am only referring to land similar to my own, which was originally salt marsh and has been considerably enhanced in value by the clover, which appears to grow almost as well in water as out. So far I have found no seed."

WEAKENED BY RUST

Many a piece of farm machinery is broken in use, at a busy critical period, because the part has become weakened by rust.

Nowadays when a machine breaks there is not only the cost of replace-

ment to be considered but the machine may be out of service for several days or weeks because the dealer's stock of parts is low and completely out on some items.

And it isn't the dealer's fault, either, in most cases. He has orders in for short stock parts, but ordering is one thing and getting orders filled is something else, as all machinery dealers and their customers know to their sorrow.

All farm machinery should be kept painted. Reduce breakage to the minimum. Parts will break often enough when machines are handled with the utmost care, but just now when replacements are so expensive and so difficult to get promptly, regardless of price, the least the farmer can do is to guard against this unnecessary weakening of essential equipment by allowing rust to set in on it.

Fortunately paint isn't scarce. It takes very little time to apply it and the cost is nothing compared to the loss of several days use of an important machine at a critical period in planting, cultivating or harvesting time.

Do You Know—

STANDARD PRACTICE

The use of Timken Tapered Roller Bearings at points of hard service in the great majority of leading tractors—and in power-driven farm machinery—is proof of leadership established on the tapered principle of design, quality of manufacture, performance, and service to the automotive industry.

that the same fundamental principles of design apply to all tractors whether of wheel, four-wheel drive, or tracklayer type?

that Timken Tapered Roller Bearings play the same part in all types, carrying radial load, thrust load, and all possible combinations of the two, and that their tasks are fundamentally the same wherever they serve?

that Timken easy take-up, compactness, and ability to outlast the tractor, figure prominently in determining the choice of Timkens for the hard jobs?

TAPERED ROLLER BEARINGS

Fighting Poultry Parasites

By Jean A. Koethen

If all the parasites which prey upon the life and health and comfort of hens and chicks could be suddenly eliminated, put out of the way for good and all, the upward path of poultry husbandry would be wonderfully smoothed. Think of all the chicks that are stunted or killed every year by the depredations of lice and mites! Think of the thousands that drop by the way, victims of intestinal worms and gape worms! And call to mind the hens that might be productive and profitable but for the attacks of fleas and ticks, as well as of lice and mites. Their name is legion, and yet every one of these losses might be prevented, and a considerable sum added to the profits of poultry work, by careful attention to sanitation and the use of some simple remedy as soon as the presence of the pests is perceived. I have not space here to go into a careful discussion of the subject of poultry parasites, but can only outline briefly some of the simplest and most generally employed methods of eradication.

Prevention First

That old proverb about an ounce of prevention was never more applicable than here. If, by absolute cleanliness and most careful attention to sanitation you can keep all parasites off the premises you will be saved a great deal of trouble. In the case of lice I doubt if this is possible. Lice are to some extent on all hens

that are not frequently dusted. The Mediterranean breeds, perhaps because they are so active and closely feathered, are not infested as heavy as the Leghorns are, and I know some poultrymen claim that their Leghorns are entirely free, but in general we may assume that where there are hens there are lice, if they are not controlled. We may also admit frankly that a few lice on a full grown hen do no great harm. It is their multiplication until they become a constant annoyance that does harm, and this condition is sure to occur sooner or later if preventive measures are not employed.

For the adult hen mites are a far more serious pest than lice, sucking her blood and disturbing her rest until both health and production are menaced. Mites can be and ought to be kept out of every hen house in the land, and cleanliness and disinfection will do it.

To the growing chick mite invasion, unless promptly controlled, means death. Last spring a neighbor, who raises show birds of fine quality, came to me with an ailing chick a couple of months old. "All my chickens are sick with some mysterious disease," she declared. "They stand around with their wings down, old and young alike, don't care to eat, and several have died. Other people are complaining of the same disease, but nobody knows what it is." I took the chick and raised its wing. There they were, right in broad daylight, crawling over

its body and sucking its blood. "Mites!" she gasped. I told her not to let the birds sleep another night in those coops till they had been hosed out and painted with kerosene and carbolic acid. They could be put temporarily in boxes or the cow shed till the coops were clean. She did this, cleaned up thoroughly, and that was the end of the mysterious disease—till the next time. With mites there is always a next time. If you do not keep after them they will keep after you.

Happily ticks and fleas do not go everywhere, though I am inclined to believe ticks will go anywhere where the premises are kept dirty enough. I have seen them only in old houses that had been neglected for years. Fleas seem to be indigenous to very sandy soil and that only in certain localities where they have gotten a good start. The cleanliness which will keep houses and fowls free from mites and lice ought to keep them free also from ticks and fleas.

Clean ground seems to be the only preventive of intestinal worms. When birds are infested with these parasites the ground becomes contaminated, and while it is possible, by the use of tobacco and other remedies, to rid the birds of them, every succeeding flock will be infested and require treatment. Treating the birds until the worms have disappeared and then moving them to uncontaminated soil while the contaminated soil is purified by growing crops for at least a year is the only sure way to get rid of worms for good and all.

Lice

Every hen, whether she is known to have lice or not, should have an opportunity to dust. In every yard there

should be some shady corner where the ground is kept moist and soft for Biddy's dusting. When hens are kept in no-yard houses a well sanded floor is usually sufficient for dusting. When the sand is covered with litter some box or corner must be arranged where the hens can wallow. The addition of sulphur to the natural dust bath is recommended by some. Many hens will keep themselves clean by the use of the dust bath alone. Others must be dusted once or twice a year, oftener if it seems necessary, with one of the many good louse powders on the market or with some home made preparation, such as the Lowry powder, which consists of crude carbolic acid mixed into a dry powder with plaster of paris and run through a sieve to break up the lumps. Sulphur and slaked lime are also recommended for dusting, and sodium fluoride is said to keep the lice away for a long period. For baby chicks that are cared for by a hen use buhach powder or grease with pure lard. Baby turkeys should be dusted weekly with buhach powder.

Mites

Thorough cleaning of walls, roosts and nests, first with a broom, then with a hose, and painting or spraying with an insecticide is the only way of getting rid of mites. Kerosene and crude carbolic acid in the proportion of one part acid to four or five of kerosene is one of the most satisfactory insecticides. Carbolineum and other coal tar preparations are used and recommended by many poultrymen. The cresol preparations are not so easily obtainable, but are highly recommended. The main thing is that the work be thorough. Any of these preparations will kill the mites they touch, but they do not kill those that hide in cracks or crawl through to the outside of the house. To do a thorough job on a badly infested house it is sometimes necessary to paint or spray both outside and inside. Then remember, one application is not sufficient, for there may be eggs left after the mites are killed. To get the new crop of mites, repeat the dose again in ten days, and then in ten days more add another to catch the stragglers.

Roosts must be moved and the insecticide applied to their ends and the cleats on which they rest. The up-to-date house has its roost swung from the roof by wires so that mites cannot reach them. Nest boxes should be emptied of litter and painted with the insecticide. It must always be remembered that the natural breeding place of mites is under the droppings on the floor or droppings board and that the oftener the droppings are removed the less danger is there of mite invasion.

Ticks and Fleas

For ticks and fleas on the bodies of the birds I know of nothing better than liberal and repeated applications of carbolated vaseline. When they are in the houses nothing but the most thorough cleaning and disinfecting will answer. Fleas are mostly in the litter or the sand, and all litter must be removed to get rid of them.

Worms

For the gape worm no sure remedy has been found but removal by means of a twisted horse hair or a feather dipped in kerosene or turpentine. Removal to clean soil is absolutely necessary.

For intestinal worms Dr. Beach's tobacco treatment seems as satisfactory as any. To 50 pounds of dry mash add one pound of tobacco dust and keep this before the birds for two or three weeks, then discontinue the treatment for two or three weeks.

EGG LAYING CONTEST

Storrs, Connecticut, August 20, 1920. Report for the week ending August 27, 1920:

The forty-third week of the laying contest at Storrs was a record breaker. In nearly all flocks egg yields have steadily declined since the high point last May and will, of course, continue to do so until the end of the hens' laying year in October. In spite of this fact the hens in the contest laid 77 eggs more than in the previous week. They exceeded the five year average for this period by a margin of 260 eggs and they laid 17 eggs more than the best previous record for the forty-third week. The total yield for all pens was 3,626 eggs, a yield of nearly 52 per cent as compared with

THE GREAT OLYMPIC FEED MILL PORTLAND ORE

OLYMPIC SCRATCH FEED

Gives Your Hens an Even Break

YOU don't expect blood from a turnip. Likewise, unless you have supplied your fowls with plenty of backbone and strength, you cannot expect continual egg production. The best egg mash or tonic only assists the hen—it takes a strong, robust constitution to withstand steady laying. Such constitutions are the result of feeding **OLYMPIC Scratch Feed**.

This strength-building feed contains the following properly balanced ingredients: Wheat, Cracked Corn, Milo Maize, Hulled Barley, Hulled Oats, Sunflower Seed and Buckwheat. Made from carefully selected whole grains, cleaned and well mixed, you'll find no better poultry feed than **OLYMPIC Scratch Feed**. Every handful is uniform and free from dust.

OLYMPIC Scratch Feed comes in three classes or grain sizes. Baby Chick Scratch, with tiny but uniformly ground grains, suited for the first three week's feeding. Growing Chick Scratch, a little coarser grains, that appeal to the growing youngsters until about eight weeks old, is the next step. From Growing Chick Scratch they graduate to the full sized grains of **OLYMPIC Scratch Feed**.

the best previous record of 3,609 made two years ago.

The weekly yield for the different breeds was as follows: Plymouth Rocks, 48.6 per cent; Wyandottes, 45.2 per cent; Rhode Island Reds, 49.1 per cent; White Leghorns, 56.5 per cent; miscellaneous, 41.8 per cent.

A pen of White Leghorns owned by Hollywood Farm, Hollywood, Washington, won first honors for the week by laying 59 eggs.

The three leading pens in each of the principal varieties are as follows:

Plymouth Rocks

Jules F. Francais, (Barred), 1,886; Oneck Farm, (Barred), 1,827; Merritt M. Clark, (Barred), 1,669.

White Wyandottes

Harry D. Emmons, 1,544; Mrs. R. W. Stevens, 1,541; Merrythought Farm, 1,506.

Rhode Island Reds

Pinecrest Orchards, 1,816; Deer Brook Poultry Farm, 1,638; Jacob E. Jansen, 1,589.

White Leghorns

E. A. Ballard, 1,776; Hollywood Farm, 1,703; George Phillips, 1,673.

Miscellaneous

A. E. Hampton (Black Leghorns), 1,719; A. L. Anderson (R. I. Whites), 1,619; H. P. Cloyes (Buff Wyandottes), 1,514.

Poultry Queries

Conducted by J. A. Koethen

Foreign Substance in Throat

A fine White Leghorn commenced coughing two months ago. She makes a weak, choking noise almost constantly, especially when eating, has great difficulty in breathing, breathes rapidly and quite audibly but does not look sick or droopy, eats well and her

comb is full and red. She has a depression just above the breast bone like a crease, so deep that the feathers project from it as if shut between the leaves of a book. What is your diagnosis of this case?—G. W. H., Hemet.

It looks to me as if the hen had something stuck in her throat or else had sustained some injury that caused a swelling there. No doubt you have looked in her throat and know that no foreign substance is visible. So far as I can judge from your description of the crease above her breast bone, it is such as would be caused by a swelling on one side of it. You might try painting this swollen place with tincture of iodine. As long as she does not appear ill she is doing no harm in the flock, but it is a question whether she ought not to be killed, if you are unable to relieve her, for her own sake.

Hens Drop Dead

In the past you have been very helpful to me, and I again come for advice. A great many of my hens are dying and I cannot ascertain the cause. They seem perfectly well, but just drop dead. One hen I noticed came running toward the house, wobbled, and in a few minutes was dead. Two others lay down and died. They have had no green feed lately, just wheat and water. I notice some of the hens and young stock cough and shake their heads.—Subscriber, Casa Grande, Arizona.

Lack of green feed is probably at the bottom of these sudden deaths. If the hens have only wheat and water their digestion is certain to suffer, and upset digestion manifests itself in a variety of ways. Alfalfa meal and dried beet pulp soaked and mixed in a moist mash are some help when greens cannot be obtained, as are tomato skins, melon rinds and other vegetable food, but if you are not in a position to provide green feed a great part of the time it would be better to get rid of the hens. Professor Dougherty says green feed is the foundation of successful poultry culture. While you are waiting for your green feed to grow, try providing a mash with some alfalfa meal in it, or perhaps you can give the hens dry alfalfa hay. Then once a day cook up whatever vegetable and fruit leavings you have and mix that with bran into a moist mash. This will not go far with a large flock but helps a good deal with the family flock. These things I am suggesting are not green feed, as we use the word, but they do help when green feed is scarce.

Gasping Pullets

My young pullets, and sometimes the hens, are suddenly taken with severe gasping. They reach out their necks and the head turns rather purple. There is high fever, which lasts till they die. I have lost three pullets recently and four years ago had a severe run of the same thing. My hens have plenty of greens, good grain and a prepared mash. Have been giving a roup remedy, but it makes them worse rather than better. Can you help me?—Subscriber, Los Gatos.

The symptoms are those of aspergillosis, a disease caused by the growth of mold spores in the lungs and deep tissues. The question is, where did the mold come from. I am told that the grain is good. Is it possible that the scratching litter has been wet and become moldy or that one of the ingredients in the mash was moldy before it was ground? Wherever the mold is, it must be gotten rid of before the disease can be cured. I hardly think spoiled fish scrap, which my correspondent thinks may be responsible, would produce such symptoms, nevertheless I would change the mash. Removal of the cause is the only cure for aspergillosis, but a dose of Epsom salts all around, either in the drinking water or in moist mash, will do no harm. Allow about a half teaspoon of the salts for each bird and make sure that it is thoroughly dissolved and mixed in the water or the mash. Clean up the premises well, removing dirty litter, and whatever mash you use, make it about half bran for a while.

The Necessity of Music Is Met By a Good Player Piano

Music is as essential to the welfare of the mind as is exercise to the body. It rests and relaxes. It refreshes and exhilarates. But in too many homes the piano stands mute, silent—a piece of beautiful furniture, but nothing more.

But YOU can play the piano. You can summon its voice, govern its moods, select its melodies. Of course, we are speaking of the Player Piano, which anybody can play.

Choose this piano carefully. It will be with you for many years, responsive to your moods, a witness to your taste.

We have player Pianos to suit almost any purse. We carry the Aeolian Co. line (the famous Pianola and the marvelous Duo-Art). With the convenient payment terms, which we gladly arrange, it is today an easy matter to own a good Player Piano.

Dealers in Steinway and Other Pianos, Pianola and Duo Art Pianos, Aeolian Player Pianos, Player Rolls, Etc.

COMP'NY'S COMIN' TO TEA

Norah's makin' a layer cake—
A spicy kind; I wish
She'd hurry an' put it in to bake,
So I can scrape the dish!
She's as cross as sticks, an' the kitchen's
just
As hot as can be.
It smells so good that I'm like to bust—
Comp'ny's comin' to tea.

We'll have the shiniest everything,
An' I'll drink coffee—p'raps;
An' more'n a dozen times ma'll ring
To carry off the scraps.
We're going to have ice cream, I know—
I hope it's lemon, gee!
An' soda biscuits—I saw the dough—
Comp'ny's comin' to tea.

I mustn't talk at the table—much;
I mustn't kick my feet;
I mustn't smack my lips, or touch
The stuff that I won't eat.
An' I must take, when plates are passed,
Whatever's nearest me
(But not, of course, if it's the last)
Comp'ny's comin' to tea.

I'll wear my dandiest blouse an' tie,
An' if I'll stay about
An' not get dirty, ma says I
May clean the freezer out!
An' so I darsn't tear an' race,
Or climb a single tree,
Or sweat, or soil my hands or face—
Comp'ny's comin' to tea.—Edwin L. Sabin.

THE RUBY KEY

(Continued from last week.)

One day Nanette, with her brushes and mops and pails, reached the last room on the top floor of the palace. She heard someone within and knocked timidly. The door opened and there stood a little old, old woman. Her face was seamed and criss-crossed with wrinkles and her hair was white as snow, but she looked up with a gentle smile upon her near sighted face.

"How do you do?" quavered the low, faded voice. "Have you not mistaken the door? No one ever visits me."

Nanette courtesied and said breezily:

"Oh, I am only a little servant to clean your room. Do you mind?"

The old lady's face brightened wonderfully.

"Come in, come in!" she cried. "I thought they had forgotten me. It is years since anyone but myself cleaned this room and I am old and feeble now."

She held open the door and Nanette sighed in pity, for the two high windows were covered with cobwebs, the floor was gray with dust and the furniture scattered about untidily.

The old lady sank into a chair and watched Nanette make a place for her pails and brushes. She smiled as the little maid hurried to the windows and began brushing the cobwebs with quick, sure strokes.

"I can see that you are a worker, even as I myself was once," she said, thoughtfully. "But tell me, why is this left to a child like you? What occupies the house men, the chamber girls and all the maids? In my time we older servants did the work and children ran errands."

Nanette laughed and tugged the harder at a huge highboy.

"I am sure the men and the maids are always busy. They dust the pictures and feed the birds, they wash the piano keys and shoo the peacocks from the steps of the palace. Further than that I do not know."

The old lady's sniff was quite disdainful.

"There is a little page who brings me food and drink and I wondered whether his tales were true. When King Maladin was alive! Ah! things were different then. It was I, Grineld, who had charge of the maids and the palace shone like a jewel from top to bottom. The King himself gave me this room for my own when I was too old for service, and it was often to me that the court fairy, Vanetra, came with her troubles."

Nanette listened gladly to the little woman's voice; it was seldom she talked with anyone. However, the dust arose in clouds as she began to move rugs, and pushing an easy chair into the hall, she led Grineld to it, saying softly:

"You will be comfortable here until everything is arranged."

Grineld smiled her thanks and nodded sleepily.

Nanette worked long and hard but soon the windows were shining brightly and the clean smell of hot soapsuds filled the room. The little maid was

smiling as she ran out upon the balcony to shake her dust cloth. Far below, the gardener's son was picking cherries. Perhaps he was watching for a little figure in a black apron; at any rate, his cap was off in a second and he began throwing the ruddy fruit toward Nanette. She stretched out her hands playfully and lad and maiden laughed together as the cherries fell at last into the fountain upon the upper terrace.

"I belong to the happiest girl in the world!" cried Nanette's heart as she went back to her work.

Grineld was asleep when the little maid stole out into the hall, but she was awakened quickly as Nanette pushed the chair across the threshold. There could have been no greater reward than her low cries of delight.

The room was sweet with summer breezes. Rugs lay smoothly upon a polished floor. The velvet of the great couch was brushed until it caught the sun, and the shaken pillows looked soft and inviting. The little old lady sank down upon them, her dim eyes filled with tears.

"I shall come often," promised Nanette as she put the last pail outside the door. "You will never be neglected again. Oh! I beg your pardon for I was about to carry away in my pocket something of yours. As I was cleaning the moldings under the window I found in a crevice this little red key. Is it not beautiful?"

The old lady took it into her hands and peered blindly.

"What is it?" she asked. "Only a little key of red glass? Yes, it is pretty; pretty enough to hang about your neck on a ribbon. But it is not mine. Keep it, child."

Nanette took the key eagerly. It was the first ornament she had ever had.

"Yes, I shall keep it if you do not mind," she said. "It is as small as a fairy key, and as red as blood."

"I am very tired," thought Nanette as she walked down the hall with her broom and brushes. "Too tired to see anyone, too tired to listen to the maids tell of their love affairs, too tired for anything."

Nevertheless, she stopped for a moment beside the group of excited servants in the lower hall. The butler was speaking in a loud whisper:

"A hundred cooks are busy in the kitchens, preparing the feast. There is a stuffed and roasted peacock ready to serve upon the great gold platter!"

"The Princess has had dressmakers for a month!" chimed in a little page.

"What is it all about?" asked Nanette timidly.

One of the maids turned to her with a frown.

"If you did not keep your nose buried in a corner you would know," she said scornfully. "Tomorrow brings the sixteenth birthday of the Princess, and His Royal Highness, the Prince of Panillac, arrives at noon."

Nanette passed on, her weariness forgotten. She was smiling gently.

"So the little princess was about to be married. May she have all the happiness in the world. As for me, it is enough that I be allowed to work in her palace."

The next morning everyone in the palace was stirring very early. The Princess had scarcely slept all night and she arose with the sun. She was bathed in perfume and dressed in garments of the smoothest satin. Just before noon she stood before the long mirror in her boudoir—in white from tip to toe, as befitted a princess. Her white train swept the velvet carpet. Only her hair was golden; that and the crown upon her head.

Then silvery toned trumpets began to blow, and peeping from her casement window Doris saw a long procession winding up the terraces toward the palace. She threw the ropes of pearls about her neck and maids clasped bracelets upon her lovely arms.

The Princess was no sooner seated alone in the throne room than the great folding doors were flung open and the Prince of Panillac stood before her. Tall and straight as a pine tree, eager eyes searching her own, Doris saw her lover. He seated himself in the carved chair beside her.

"Princess, you have not forgotten? You love me still!"

Doris bowed her head. Three times she struck with her scepter upon the bell at her left hand and from a darkly curtained doorway the Prime Minister entered. He wore the somber robes of state and his long beard flowed whitely over the velvet. Reverently he handed a golden casket to the Princess and withdrew.

Doris lifted the jeweled lid. In the first drawer flashed chains and brooches and bracelets of diamonds. In the second lay priceless ornaments of turquoise, but in the third was only a small white metal box. The Princess held it in the palm of her hand and her lover bent forward eagerly. Together they raised the cover.

The two stared into each other's eyes. Doris was pale as death and the Prince clasped her hands tightly, for in the box lay not a key but a folded sheet of paper.

Trembling they read:
"To the Princess Doris:

"Your father once did me a great wrong but I loved him. Because he did the wrong I am taking this ruby key which he has put so carefully away. There is no way into your inmost heart without it. You may think you love but you will forget and be as false as was the king. If the key is ever found it will be before your sixteenth birthday, through the diligence of someone to whom you have brought great happiness.—Vanetra."

The princess bowed her head and tears flowed down upon the satin of her gown.

"Doris," whispered the prince, "lift your head. Perhaps the key has been found."

"Alas!" she cried, "it has not, it cannot have been found, miserable being that I am. Never in all my life have I brought happiness to anyone. What use to wed without you have the key to my heart. Would I not always be as cold and worthless as you find me now?"

The prince comforted her but his face was very sad.

"Without the key to your heart I know you would not always love me. But stay, it cannot be that there is not someone to whom you have been kind. Perhaps the key was found long ago. We shall have it proclaimed throughout the city."

He sprang from his chair and summoned all the pages of the palace. They came like a flock of eager birds in green and gold plumage. The princess watched listlessly. She was sure the ruby key was lost.

The pages began to stream down

the corridors of the palace and through the streets of the city, proclaiming loudly:

"Who has found a ruby key? Whoever has a ruby key will be rewarded."

Now little Nanette had scrubbed patiently until nearly noon. Then she took off her black apron and went to an obscure balcony to view the procession. Long she stood there, admiring the brilliant colors, the wonderful music and the beauty of the prince as he went marching up the steps toward his love. Nanette sighed as he disappeared.

"Ah, the princess has her sweet-heart, but will mine ever come to me?"

A red, red rose fell at her feet. Nanette picked it up, her heart beating wildly. She felt gentle fingers over her eyes and looking saw the gardener's son.

"Little one!" he cried. "At last I have met you. Why did you never come into the gardens? Many a time have I plucked nosegays, but always you have disappeared like a shadow. This time you shall not leave so soon."

He looked into her dark eyes and reflected that she was like the tiger lilies of the terrace, slim and graceful with bronzy skin and jet black hair.

Nanette gazed to the right and to the left, but always Orin's earnest face was before her.

"Did you really watch for me?" she whispered.

"Yes! Watched and waited until I dreamed of you and loved you."

The little maid bowed her head upon his breast.

"Can it be that you love me?"

"You know. But what is this?"

A page with his trumpet stood in the nearest door, shouting his proclamation into the corridors.

Nanette cried in amazement:

"A ruby key! I have one upon the ribbon at my neck. It is made of red glass I think, but it is beautiful, is it not?"

"It is indeed," answered Orin, examining the key. "Run with it to the princess. Perhaps she will give you a holiday and we can be together. I will wait."

Nanette ran down the hall and straight to the throne room. She entered quickly and held out the ruby key to the princess.

Doris arose. Her face was white, her slim hands clasped to her breast.

"The key to my heart!" she whispered.

The prince took the ruby tenderly. Doris sank back upon the throne, and tears of relief filled her eyes while her face took on a lovely gentleness that transfigured it.

"My Prince, it is indeed the key to my heart, and this maiden is one to whom I gave the little dress she has on. It was not much of a kindness, but the guardian of our love has nurtured it. Keep the key, my king, and do not lose it ever."

The prince clasped his sweetheart in his arms while little Nanette ran with flying feet back to her lover.

The princess and the prince were married with great pomp, but they were not a bit happier than Nanette and Orin, who were wedded by the old priest in the little stone church just outside the palace gates.

When they returned, the royal princess and her husband led the way to a distant and beautiful corner of the grounds where was built the dearest little home in all the world. It had six rooms, each more delightful than the other, and Nanette's eyes sparkled.

"How I shall love keeping it tidy!"

"And you must come often to the palace," begged the princess. "We shall be looking for you."

So it was that not many years afterward the golden haired sons of Doris and the dark eyed daughters of Nanette were romping about the palace grounds.

The immense building shone from top to bottom as in the days of old, for a great staff of willing servants had come from the Prince's country.

The children were very happy. There were little saucer pies and wonderful doughnuts always ready in Nanette's spotless kitchen. At the palace were birds to tame and ponies to ride, but it was seldom that they did not all troop into Grineld's cozy room for a goodnight story.

Kind Old Gentleman to Newsie:
"Don't all these papers make you tired?"

Newsie: "Naw. I don't read 'em."

Great Majestic

The Range
with a Reputation

Great Majestic ranges bring delight and economy to kitchens. For sure-baking and fuel-saving qualities they are exceptional. Heat-tight, unseen-rivet construction gives you easy control over the heat in baking. Very little fuel is required for good baking and water heating.

And Great Majestic ranges are easy to keep spick and span. Their beautiful burnished blue cooking tops require only an occasional application of paraffine to keep them bright and clean—no blacking required. Even the nick-eled parts are riveted on for smooth finish as well as for strength.

Great Majestic ranges are made in many regular and combination styles with or without legs. They are sold by leading retailers of ranges in practically every county in forty-two states.

HOUSEHOLD QUERIES

Weevil in Foodstuffs

Will you please tell me a remedy for weevil in flour, macaroni, rice, etc.?—Subscriber, Owensmouth.

First, as we all have found, it is a matter of keeping everlastingly at it, that is, constantly looking over and caring for these foodstuffs, especially through the warm days. Even the smallest packages sometimes become infested before they can be used. If the foods are clean of infestation and stored in cool dry rooms which are themselves thoroughly clean there will be little trouble, but if some of the pests do find their way in, sifting through a fine sieve in case of flour and meal will take out all adults and larvae. The eggs, if any, will not be removed and will later hatch to make more trouble. It will be necessary to pick over rice or macaroni, spreading out small quantities over clean white paper. After this sifting or picking over process the foodstuffs may be heated in moderate oven, with door open, to 125 to 150 degrees Fahrenheit. This will kill eggs. (Corn meal, however, is easily overheated and is liable to turn rancid after this process. It is best to use as soon as possible.) Place these heated foodstuffs immediately in sterilized jars with tight covers. Where a barrel of flour or other large quantity of food is infested or where a whole room is infested use carbon bisulphide. A cupful to a barrel is sufficient. Place liquid in shallow pan on top of flour. It is very volatile and forms a heavy gas which sinks through the container, penetrating through the particles and killing all insect life. It is also very inflammable. Do not bring a light near it. Place tight cover on barrel and leave 24 hours. When cover is removed to air out and disperse fumes of gas, place clean cloth over top to prevent reinfestation. The same treatment is given to storerooms, using one pound to 1,000 cubic feet of space in the room. The odor soon passes from foods so treated and they are in no way spoiled for food.

Chow-Chow—Green Tomato Pickles

Will you please publish in your paper recipe for green tomato relish and chow-chow.—Subscriber, Artois.

Chow-chow—Wash and cut into large pieces sufficient tomatoes to measure three pints. Place in a china bowl and add 1 pint small onions and cover with 1 cup salt. Let stand ½ day. Then drain and place in a preserving kettle and add 1 pint cauliflower, parboiled, 1 dozen green peppers cut into pieces, ½ dozen red peppers cut into pieces, 1 quart string beans cut in inch pieces and parboiled, 1 quart strong cider vinegar, 3 cups water. Bring to a boil and cook ½ hour. Place in a bowl ½ cup flour, ¼ cup mustard, 1 tablespoon paprika, 1 teaspoon turmeric, 1 ounce mustard seed, 1 tablespoon celery seed, 1 cup vinegar. Mix thoroughly before adding to the chow and then stir to blend thoroughly and cook for 15 minutes. Fill into glass jars and seal while hot.

Green Tomato Pickles—Remove a thin slice from the blossom end and the hard portion around the stems of 1 peck of green tomatoes. Slice, sprinkle with 1 cup salt and set aside over night. In the morning, drain, then boil 15 minutes in 2 quarts water and 1 quart vinegar. Drain again. Cook together ten minutes 1 gallon cider vinegar, 2 pounds sugar, 3 red pepper pods cut into strips, 1 tablespoon white mustard seed, whole, and 1 cup cinnamon bark, ginger root, mace, and whole cloves mixed in the proportions desired. The spices, with the exception of the red pepper pods, should be tied in a muslin bag. Add the tomato and simmer gently about one hour, remove the spices, and put the pickles into sterilized glass jars. Let the syrup completely cover the slices of tomato.

ONE WAY TO USE A SHOVEL

The superintendent of a large factory was short of help. One morning as a last resort he stopped an old tramp who was passing by.

"Are you looking for a job?" he asked the tramp.

"What kind of a job?" the tramp asked.

"Can you do anything with a shovel?"

"Yes," answered the tramp, rubbing his eyes. "I can fry ham on it."

Tire Knowledge is Spreading Faster than Some People seem to Think

NOTHING is surer than this—that the man who bets against the informed opinion of the tire users of this country is going to *lose*.

The average American motorist is essentially practical. He may get off the track now and then.

But always you will find him going right in the end.

* * *

The trouble with the irresponsible type of tire dealer

is that he allows his ideas of his customers to be bred in an atmosphere of distrust and fostered by a small coterie, not at all representative of the motoring public.

Not every motorist of whom he takes advantage always finds it out immediately.

But the time it takes for motorists generally to complete their tire education is growing less and less every season.

* * *

The United States Rubber Company has always stood for a *wider spread of tire knowledge* among motorists.

Doing everything it could to encourage them to greater *care in tire selection*. Firm in the belief that the more they know about tires, the *quicker* they will come to *quality*.

* * *

Back of the *legitimate dealer* who sells *legitimate tires* stand all the weight and influence and responsibility of the United States Rubber Company—the *largest and most experienced organization* of its kind in the world.

Go to him when you want a tire. For that way—and that way only—lies *economy*.

The Zante Currant in California

By Fred K. Howard

PRIOR to the outbreak of the great war the United States imported upwards of 18,000 tons of Grecian or Zante currants. These currants have filled a demand which apparently can never be filled by the common varieties grown in California. The Thompson Seedless is eliminated in this field because it lacks the distinctive flavor which is so desirable in a good grade of currant.

In these days of comparatively high prices for foodstuffs and particularly California dried fruits, it would seem by many to be idle talk to speak of increasing the dried fruit output of the San Joaquin Valley to the extent

alone. Its possibilities are apparently unlimited, or limited only by the amount of available land suited to its culture, and it will not compete on the market with the other raisin varieties, except perhaps the Thompson to a limited extent because of its distinctive flavor and quality.

Name Is Confusing

The name "currant" which is given this grape is very confusing and possibly has much to do with the slowness with which the American housewife takes to it as a culinary possibility. It is too often confused with the English or bush currant commonly grown in the East and used principally for jams and jellies. There seems to be no particular reason for the name "currant," and it appears to have been the result of a gradual evolution of "Corinth," a seaport town from which most of the early cargoes of this fruit were forwarded to western Europe. It is safe to say that a great many people who are considered well informed are not aware that the small black dried currants so commonly used in mince-meat making are not the dried product of the eastern currant bush, but are in reality the dried product of a grape vine.

Currant Growing a Success

Beginning with the introduction of this grape into California in 1901 the United States department of agriculture began experiments to determine why this variety did not set satisfactory crops of fruit as did the red and white varieties of the currant grape which were introduced into this state in 1861. It was finally demonstrated that to make the blooms set well and to secure a satisfactory crop it was necessary to girdle or "ring" the vines during the blooming period. This girdling consists of making two parallel incisions through the bark, about a quarter of an inch apart, around the trunk or canes of the vine, and taking out the bark between the two parallel cuts. This work must be thoroughly and cleanly done if the operation is to be at all successful.

History of Introduction

A brief history of the introduction of the currant grape is given in the Journal of Heredity, by Geo. C. Hus-

mann of the United States department of agriculture. He says: "Currant grape varieties were introduced into California as early as 1861, and these were followed by later introductions. Among all these, however, there appear to have been no valuable dark colored varieties, but some fairly productive red and white strains producing fruit of inferior quality. The 'Panariti' was introduced by the United States department of agriculture through David Fairchild, agricultural explorer of the department, a consignment of cuttings reaching Washington, D. C., May 9, 1901. Concerning this Mr. Fairchild stated at that time: 'The variety of grapes pro-

ducing the currant, or corinth, of commerce. These cuttings were purchased in the village of Panariti, which lies along the mountains back of Xyloncas tron. This village is noted for producing some of the finest corinths in Greece.'"

It appears from the foregoing that the variety introduced by the department of agriculture, which has been given the name of Panariti, according to the custom in Greece where varieties are not distinguished but are known simply by the name of the region in which they are produced, is one of the finest grown in Greece. If this is true there would seem to be no logical reason why California growers can not compete successfully with the foreign product.

(Continued on Page 400.)

Typical Bunch of "Panariti," the Zante Currant of Commerce.

of approximately \$6,000,000. Yet this is what would be done if the sales and advertising methods which have been employed so successfully in the marketing of other fruits by the big producers' associations were to be applied to the Zante currant. In fact it is impossible to even estimate how much the consumption of this dried grape might be increased in the United States for cooking purposes

As the Zante Vines Grow

Zante currant vine on ranch of W. T. Gibson at Fowler. Vine is three years old this year, matured a crop of 300 bunches. A young Zante currant vine showing method of training and pruning.

Half the Wearing Parts

In the *ordinary* battery there are *two* wearing parts—the lead plates, and the insulation between the plates. These are the parts of the battery exposed to the chemical action of the solution—the parts most likely to give out.

The Still Better Willard has only *one* wearing part—for Threaded Rubber Insulation is *not* affected by the solution—it will outlast the battery every time.

Threaded Rubber Insulation has all the high insulating qualities of ordinary rubber, yet allows easy flow of current from plate to plate.

With this acid-proof insulation there are no rotted separators, no expensive replacements. No internal short circuits due

to carbonizing or punctures. No checking or cracking.

Finally, the Still Better Willard is shipped and stocked "bone-dry"—not a drop of moisture in it, no possibility of deterioration. It starts its service in your car as fresh and "peppy" as if just built.

Of the 191 passenger cars and trucks using Willard Batteries as standard equipment 152 have adopted the Still Better Willard with Threaded Rubber Insulation.

Willard Service

This trademark is branded in red on one side of the Still Better Willard Battery—the only battery with Threaded Rubber Insulation.

By C. B. Messenger

THE password was "Lemons" and some of the slogans were: "Follow the Leader"; "Listen to the Whistle"; "Ask questions of the speaker"; "Drink lemonade"; "Eat a plenty."

I did not reach the lemonade jar, but did eat a plenty of an exceptionally fine and well served meal. It was at the annual field day of the Lemon Growers of California or, usually called, The Lemon Men's Club. Notwithstanding the password was "Lemons"; also notwithstanding the fact that lemons have been engaged in one long funeral procession for some months, there was nothing in this meeting held at Santa Paula, and largely on Limoneira Ranch, which was at all doleful.

The Lemon Growers gathered at ten o'clock in the morning at the packing house of the Santa Paula Citrus Fruit Association. They investigated the perfectly modern equipment and started on what the chief whistler, James Culbertson, termed the morning ramble. Mr. Culbertson led and with his whistle handled several hundred lemon growers in the long procession of nearly 100 machines, kept the crowd together and investigated methods as followed on the Rancho Sespe, Keith Spalding, owner, visiting orchards, quarters of the men, club room and dining rooms for the workmen, then a trip through the Mexican quarters, showing the new type house, 20 by 22, with three rooms. Other features of the ranch visited were the reservoir with a capacity of 1,600,000 gallons, 1,650 acres of orchard and bean land, 350 acres of lemons, orchard heater depot and a dozen and one other fea-

tures of an up to date lemon ranch.

Then the Teague-McKevitt ranch. Here C. C. Teague gave talk on the double cover crop system followed on the ranch. This crop consists of Whippoorwill peas planted the last of June. This summer growing cover crop was kept irrigated and growing lustily until August 18, when vetch seed was broadcasted. The furrows were run, covering much of the seed, which, at the time of the meeting on Saturday, September 11, was coming through good and plenty. This vetch will be permitted to grow until, perhaps, February. Meantime the summer cover crop will cease its growth and, if frost should come, perhaps be killed and largely disappear before plowing time. The decaying roots and much of the top will, however, make for more humus.

The Cultivator camera was brought into action, and on this page appears a view of these double cover crops as they are today.

Luncheon was next, and the ladies of the Methodist Church who served the meal in the Santa Paula Woman's Club House were given a standing vote of thanks and appreciation for a remarkably fine meal. The poetical nature of this event may be judged from the following, which was the program of the day:

"Some love the matin chimes that tell
The hour of prayer to sinner,
But better far the midday bell
That speaks the hour of dinner!"

There was little of the poetical in what followed, however, that is, in the

general talk. Like all other events of the day, the talks were straight from the shoulder. Manager Fleet of the Sespe Ranch presided and C. C. Teague extended welcome in behalf of Santa Paula. R. C. Allen of Bonita responded.

In extending welcome to the attendants—and a most cordial welcome it was—Mr. Teague discussed the problems now confronting the lemon grower and the need for closest study of both cultural and marketing problems, more, the need for considering national and even international conditions.

It costs the California lemon grower more to produce lemons, more to harvest, pack and ship than it costs the Italian grower. Congress is responsible for this advantage to the foreign grower. Mediterranean fruit may now be laid down in New York for a 25 cents per hundred freight rate. The Californian is taxed \$1.40 per hundred. However, the greatest handicap of all at this moment is the exchange rates. An American dollar will now buy \$4 worth of Italian money. Price of foreigners in New York at this time is around \$2.20, while Californians cost \$3 f. o. b. California. Add freight and the cost in market is \$4.40. These advantages, coupled with enormous production costs in California, will cause the ruin of the California industry.

The railroads must have more money to meet increased operating expense, but with continuance of pres-

ent conditions the lemon industry must end and ultimately the railroads cease to haul lemons. This should justify an emergency rate which would, in small part only, help to equalize conditions. It's a generally accepted principle of the railroads, that of "How much will the traffic bear?" This is the time for the railway management to put this principle into operation.

In responding to the welcome, R. C. Allen of Bonita reviewed the history of the club, covering the past 14 years. Especially did he commend the club for its initiative in the fight on brown rot of the lemon. This and other effective work has been done because the lemon industry has been blessed with Blanchards and Teagues.

The biggest lesson of the afternoon drive through the Blanchard estate and the Limoneira was in pruning. Santa Paula has definitely worked out lemon pruning, at least to this extent, that it is now known that the severe cutting which has been given to lemon trees has cost the lemon growers thousands of cars of fine fruit. The severe heading back, the cupping and other methods which call for large use of saw result in lessened bearing capacity.

"Long pruning," similar to the modern pruning of deciduous fruits, is coming to the lemon.

Limoneira is a wonder, a wonder of productiveness and of efficiency. It's an inspiration to the business farmer to see the business methods apparent in its packing house, its labor housing, its orcharding. Especially is the ex-

(Continued on Page 403.)

Where the Lesson on Lemons was Taught on a Ventura County Perfect Day. Photos by Cultivator Camera.

Upper left hand picture shows Santa Paula Woman's Clubhouse and a few of the perfectly satisfied 250 people who had partaken of the hospitality and learned of lemons. Upper center shows C. C. Teague, in foreground at extreme left, telling of the double cover crop idea which is more specifically shown in the illustration at upper right. Cow peas were planted in June and vetch in August. The crop will not be plowed under until March. These scenes were in the Teague-McKevitt orchard. Lower left hand scene is in the 27 year old lemon orchard of the Limoneira. Tree in foreground is one which was left as a "check" tree at time of pruning remainder of the orchard some two or three years ago. The second tree from it up the row, the one with the white tag, was given a pruning similar to that which is now being given to the first tree. This, two years ago last spring. It is now filled with dark green, healthy looking growth of branch and leaf and loaded with fruit. The method of pruning is made plain by the tree in the foreground. There was no severe cutting back of the large branches but a thinning and cutting out of useless wood, leaving smaller branches and twigs to extreme end of every large branch. The center picture in lower row shows an orchard somewhat less than a dozen years old consistently pruned since planting without severe cutting, and for the past few years trained by the "long pruning" system. Note down the row over the heads of the crowd the uniformity, thousands of trees as like as peas. Lower right shows a portion of the autos. The greater number of them are massed down near the crowd. Less than a score can be counted, yet there are 100 in the entire line.

Agricultural News Notes of the Pacific Coast

Northern California

Hop harvest is in full swing.

The wholesale price of sugar has dropped to \$17.

Many Alameda County people attended the state fair on Farm Bureau Day.

Sonoma County's fair showed entries of livestock from all over the state.

Newcastle has begun shipment of cling peaches. Pears and quinces are all out of the way.

Several new wells have been bored in Livermore Valley and a good flow of water is being secured.

The hop mills at Gerber are handling what is said to be the best yield ever secured in Northern California.

Rains in Siskiyou were a great help to livestock and ranges, but recent cold weather has damaged high meadows.

Proposal to discontinue operation of the Ocean Shore Railroad has been protested to the railroad commission by residents of San Mateo.

The railroad commission has asked all auto stage lines to post in their cars signs prepared by the forest service, warning against forest fires.

The chamber of commerce of Hayward, Alameda County, is urging an all year egg laying contest similar to the one being conducted at Santa Cruz.

Farm bureau meetings will be held in Placer County at Roseville, September 27, at 8 p. m.; Forest Hill, 29, 8 p. m.; directors' meeting, Mount Vernon, 25.

The Rice Growers Association is urging all growers to hold for the minimum price of \$8 per 62 pound barrel, set by the Southern Rice Growers Association, recently assembled at New Orleans.

Members of Eldorado County farm bureau have decided that it would be advisable to center on one breed of hogs, and an effort is now being made to have every hog raising member of the bureau keep Duroc-Jerseys.

Owing to great demand for fresh wine grapes they are being shipped East in refrigerator cars, ventilator cars, box cars, even cattle cars, according to statement by R. L. Nougaret of the viticultural service.

It is expected that approximately 300 prize winners of the boys agricultural clubs of California will attend the sixth annual agricultural club convention to be held October 14, 15 and 16 at the university farm at Davis.

A twice a day airplane patrol to frighten wild ducks is being maintained in many of the rice plantations in Colusa County. It is necessary to maintain the patrol on moonlight nights also, as this is a favorite feeding time.

The Colusa County Truckmen's and Draymen's Association has fixed hauling charge for rice at \$1.50 per ton for five miles or under and 30 cents per ton for each additional mile; higher rate over poor roads. This is somewhat less than last year's rate.

The board of directors of the Honcut-Yuba irrigation district has approved plans for the project and referred them to State Engineer McClure. The district to be served by the proposed system covers 30,000 acres in Yuba and Butte Counties.

Central California

Madera County fair will be held October 7 to 9.

Sweet potatoes are beginning to move at Turlock.

Turlock will ship 1,200 carloads of tomatoes this season.

Fresno County's 1920 tax rate will be lower than last year.

Tehachapi growers will ship out 30 carloads of apples and pears.

Turlock has 3,375 acres planted to sweet potatoes, mostly Jerseys.

Applications are now being made for lands in the Delhi colony in Merced County.

The prune crop for this year is estimated at from 180 to 200 million pounds.

The Weed Patch farm center of Kern County has purchased site for a community house.

Some cotton growers of Kern County fear loss of their crop because of water shortage.

The cotton crop in the Porterville district of Tulare County is reported to be yielding well.

The Peach Growers Association at Clovis, Fresno County, is installing a new elevator and conveyor.

The Peach Growers Association has amended its by-laws so as to admit fig producers to full membership.

The Tipton-Porterville-Lindsay district shipped out 100 carloads of cantaloupes this season with satisfactory returns.

Santa Clara Valley tomato growers are endeavoring to secure outlet for 1,500 acres of tomatoes which canners decline to buy at any price.

The Raisin Growers Association is adding to its membership at a rapid rate, support coming because of the attack made by the federal government.

A "road hog" caught near Modesto in the act of crowding an auto off the highway with his truck has been arrested and deprived of his license for 30 days.

The report of the engineer for the Merced irrigation district will recommend that the dam be erected at a point on the Merced River near Exchequer in Mariposa County.

Two carloads of grapes were recently held up by Horticultural Commissioner Roullard of Fresno County. The grapes were on the edge of molding because of the long wait for cars.

California Peach Growers, Inc., announces that it will complete the merger of peach and fig interests by January 1. The new organization will be known as California Peach and Fig Growers.

The irrigation board's decision that everybody should hold up on irrigation because of water shortage has been rescinded because of the showing of orchardists that great injury would result to orchards deprived of fall irrigation.

A survey of the water resources of Tulare County is being made by the state department of engineering. The survey is in two sections, the district dependent on the Kaweah River and the southern part of the county dependent on Tule River, Deer and White Creeks.

Southern California

Orange County fair at Huntington Beach, October 7-9.

National Tractor Show of the West this week at Glendale.

Riverside cannery has put up 125,000 cases of fruit and vegetables.

Work has begun on opening the Santa Ana River channel to the ocean.

Hemet peach growers report receiving \$30 a ton for undersized freestone peaches to be made into jam.

The U. S. bureau of crop estimates places the probable crop of walnuts at 24,000 tons.

The Los Angeles County farm bureau is holding a series of soil moisture meetings.

The harvesting of sugar beets is showing an average yield of about nine tons to the acre.

Horticultural Commissioner Ryan of Los Angeles County is making a rodent control drive.

Rainstorms in the Blythe and Coachella Valley districts did some damage to the cotton crop.

C. C. Teague of Santa Paula has been elected president of the California Fruit Growers Exchange to succeed P. J. Dreher, resigned.

The bean harvest is earlier than usual on account of the hot, dry weather and absence of fogs during July and the first part of August.

At a meeting of cotton growers at El Centro, growers of Pima expressed themselves as willing to hold until they could secure \$1 per pound.

The sugar beet harvest indicates an 80 per cent of normal crop as compared with 60 per cent last year and a ten year average of 90 per cent.

The state department of agriculture estimates condition of Lima beans at 47 per cent of normal and forecasts production about the same as last year's.

Beekeepers of Southern California will make large exhibit at the Riverside fair. The fair association is offering especially attractive prizes for honey exhibits.

Directors of the Imperial County farm bureau are looking forward to a regular annual county fair. Definite arrangements are made for the one to be held this fall.

Report issued by the bureau of crop estimates on pasture conditions September 1 shows pastures throughout the state 73 per cent of normal, condition best in southern and mountain counties.

California Fruit Growers are interested in the claim now being made by the members of the bureau of markets that berries, tomatoes and some other fruits can be preserved more economically by freezing than by canning.

Dr. J. E. Coit, formerly farm adviser of Los Angeles County and for years connected with the elcticulture division of the state university, has located in Los Angeles to establish a business as consulting horticulturist.

The coming year's orange crop in Southern California is estimated by the federal and state departments: Los Angeles County, 6,650,000; Orange, 2,700,000; Riverside, 1,800,000; San Bernardino, 4,400,000; San Diego and Ventura, 300,000.

The Coast and General

Colorado's cantaloupe crop may total 4,500 cars.

Watermelon syrup is being manufactured in Georgia.

Florida holds its state fair at Jacksonville, November 18-27.

The canned fruit market is slower than it has been for years.

Hop pickers in the Yakima Valley, Washington, are being paid \$1 a box.

Several large drainage projects are proposed for Florida agricultural districts.

Heavy shipments of feeder cattle are being made from Florida to Texas ranges.

The Cattle and Horse Raisers Association of Oregon met September 12 in Prineville.

The population of the state of Washington increased during the last decade 18.8 per cent.

Leon County, Florida, has a livestock breeders association, said to be the only one in the state.

Okanogan County, Washington, will hold no community fairs this year, because of the crop shortage.

The Oregon state fair will pay out over \$1,000 in prizes for butter and cheese produced in that state.

An inch and a half rainfall in western Oregon occurred September 12 and 13. Hops and prunes were damaged.

Several Oregon alfalfa growers have suffered serious losses because of shortage of labor and shortage of cars.

Yakima Valley of Washington is shipping out 500 carloads of hay per month at prices ranging as high as \$25.

The greatest crop ever of corn for the U. S. A., 3,131,000,000 bushels, is the estimate of the crop reporting bureau.

Cabbage growers of Colorado have formed a marketing exchange, membership to apply only for the 1920 shipping season.

Livestock men of Yakima County, Washington, have been granted reduction of 50 cents per head in assessed valuation of sheep.

The farm bureau of Cowlitz County, Washington, has secured the services of a poultry specialist, who will hold culling demonstrations throughout the county.

Hop growers of Puyallup Valley, Washington, say that hops have never been in better condition. The yield promises to be 85 per cent better than last year's.

A consignment of Thompson Seedless raisins was recently received in San Francisco from New Zealand. The shipment was destined for New York markets.

Skagit County Dairymen's Association, Washington, is erecting a milk products plant at a cost of \$260,000. It will handle a quarter of a million pounds of milk daily.

Fruit growers of the Yakima Valley, Washington, have served notice on the general freight agent of the Northern Pacific that they will ask the next state legislature for a reciprocal demurrage law compelling transportation companies to pay demurrage for every day growers are forced to wait for cars.

Cotton Quarantine Strengthened

PUBLIC hearing was held at the office of the state department of agriculture in Los Angeles on September 14 to consider the advisability of strengthening the existing plant quarantine regulations covering cotton and cottonseed and their by-products; to coordinate the efforts of the authorities of the states of California and Arizona and Lower California in Mexico in keeping from the cotton areas in these states the cotton boll weevil, the pink bollworm of cotton and all other cotton pests.

These three states have the only cotton areas of any extent in the known world free from the cotton boll weevil or the pink bollworm, or both,

and measures even more drastic than those now in effect for maintaining this freedom were drafted and adopted at this public hearing. At the same time the regulations now enforced were made to harmonize.

Cotton seed and seed cotton from all states where the boll weevil or the pink bollworm are known to exist are prohibited entry to the states of California, Arizona and Lower California. All other cotton and cotton seed products are admitted only when complying with regulatory measures. While New Mexico is not known to be infested with either the cotton boll weevil or the pink bollworm, no protective measures are being taken by that state and consequently cotton

products grown there are placed in the same category as cotton products from states actually infested. If New Mexico takes proper measures for her own and her neighbors protection it is possible the restrictions may be modified in future.

Among questions pertaining to every phase of the cotton industry from the planting of the seed to the ginning of the cotton, which were thoroughly discussed, was the development of a source of supply of pure cotton seed, which measure would tend to eliminate the desire to import seed from states where the boll weevil and the pink bollworm now exist. It developed that the state department of agriculture, in cooperation with the U. S.

department of agriculture, took the initiative last spring and secured a supply of pure Lone Star short staple cotton seed, which was planted in Imperial County under conditions to insure continued purity of the seed, and that from this planting sufficient pure seed will be harvested to plant approximately 1,300 acres next spring. It is hoped to continue this work and ultimately not only to supply the demand in California for pure short staple seed but also in the Southern states.

The disinfection of box cars contaminated with cotton seed from the infested areas was discussed and it was shown that the state department

(Continued on Page 405.)

Control of Citrus Pests by Dusting

By R. E. Smith at Pomona Farm Bureau
Pest Control School

FEW years ago the walnut aphid was considered in many districts one of the most injurious and difficult

to control pests which affect this crop. In fact, no method of control whatever was in practical use in spite of repeated efforts by state and federal investigators to find some means of handling this pest. The difficulty lay in the size of the trees and the rapid multiplication and spread of the insect, making ordinary spraying methods so slow, laborious and expensive that most growers could not see any hope of practical control along such lines.

Today this aphid is being controlled so completely, easily and cheaply that it is no longer a pest in the districts where it was formerly worst. This has come about through the development by the California Walnut Growers Association of a method of applying nicotine to the trees in the form of a dry powder or dust instead of as liquid spray. So largely is this material used by the walnut growers that the association has incorporated a subsidiary branch, the Walnut Growers Spray Manufacturing Company, to manufacture it at cost for its members. The advantage of this method over liquid spraying is most easily emphasized by pointing out the following fact: Thorough spraying of good sized walnut trees requires from 25 to 50 gallons of spray per tree, or from 500 to 1,000 gallons per acre. On the basis of weight this means that for every acre of trees sprayed a weight of from two to four tons of water must be hauled to and through the orchard and sprayed onto the trees. While it is not denied that this, with proper equipment, can be done, the fact remains that the time, expense and effort required have thus far defeated every effort toward any general, effective spraying of walnuts by the liquid method. Contrasted with this is the fact that with the Walnut Association's method and material only 50 to 75 pounds weight per acre is needed. This is put on with a much lighter and cheaper outfit than the spray rig required for walnuts, the work is very much quicker, easier and cheaper, and the results obtained are usually better; at any rate they are as near perfection as are often reached in insect control.

The success of this method has led to numerous inquiries as to its applicability in the control of other pests,

and among these certain citrus enemies, the subject of our present discussion. At the outset we would most strongly emphasize the fact that the mere putting on of an insecticide in the form of a dry powder rather than in a liquid or gas is not sufficient. This is only one factor. We must have an effective kind of dust for each particular purpose, the proper machine for putting it on, and the work be done at the right time and in the right way. Inasmuch as the much older methods of spraying and fumigating are still being improved by radical changes and new discoveries in methods and materials, it is reasonable to assume that dusting is only in its infancy in these respects. At the same time we are very far from claiming for dusting that it will ever supersede other methods of insect control or that it is anything more than an important addition to our present methods.

Practically all the success which has thus far been attained in the control of insects by dusting has been with two classes of insecticides: 1. Volatile substances which kill by giving off a gas into the air. Such substances are, at present, mainly two, nicotine and sulphur. 2. Stomach poisons, like lead-arsenate and Paris green, which are dusted upon the plants and then eaten by chewing insects. That this list and classification will be extended in the future is highly probable.

Coming down to citrus insects, the one which most strongly suggests itself is the red spider, a pest which has long been successfully controlled by dusting with dry sulphur. There are two objections to this; namely, that sulphur is effective only in hot weather and that it is disagreeable to pickers working in the orchard soon after the sulphuring has been done.

The fact that in our coastward sections particularly the spider often develops quite extensively during the winter cool season, and the objections made by lemon pickers, together with the existence of numerous commercial spraying outfits who are pushing the liquid spraying method, has had a tendency to force sulphur dusting into the background during recent years. There is noticeable, however, a growing dissatisfaction with the results of red spider spraying. The claim is

made, and with some apparent support, that while proper spraying with lime-sulphur affords temporary relief, yet the spider gets bad most often in the best sprayed groves, and the more spraying is done the more has to be done. I believe it is true that in certain parts of Los Angeles County the spider is worse today in groves which have been persistently sprayed with lime-sulphur than in the majority which have never been sprayed. In many cases good results in red spider control have been obtained by thorough sulphuring in the warm fall months, thus reducing the pest to such a point that in well cared for groves it does not get bad again during the winter. This is cheaper and easier than wet spraying and the small grower can do the work himself if he prefers. With oranges there is no objection to this method on the part of the pickers. The best authorities on red spider, like Professors Quayle and Esig, tell us that for this purpose the finest sulphur should be used and that it is better to mix about 25 per cent of some material like hydrated lime with the sulphur to break up the lumps, reduce the danger of burning in hot weather and make the sulphur blow and stick better. Acting on this advice, our association has been making a special dusting sulphur mixture which we believe to be the best possible form for dry dusting. We buy the very finest and highest grade in carload lots and run this through our big dust mixing outfit, making a mixture containing 75 per cent sulphur and 25 per cent of our special filler. This makes a perfectly smooth, homogeneous, impalpable dust which forms no lumps, blows like smoke and sticks well to foliage. Whenever sulphur is to be used such a mixture is certainly better, and we have been able to make it somewhat cheaper than pure sulphur.

There is a good field for the development of dusting materials other than sulphur for red spider in order to get something which will work in cool weather and not bother the lemon pickers. Some progress in this direction is being made by our organization.

The orange aphid seems to have become an established pest in Orange

and Los Angeles Counties during the last three or four seasons. Like all aphids, its occurrence is sporadic, but it has been bad for several years in succession, and right at the present time it is developing very rapidly on young orange trees. This pest curls the leaves and ruins the new growth. Particularly in western Orange County it has caused immense losses by retarding the development of young Valencia's. It is much more resistant to nicotine than the walnut and is also harder to hit, either with dust or spray, on account of the curling of the leaves. With any method of treatment best results are obtained by working before much curling takes place, going over the young growth as soon as the first aphids appear. For this purpose the dusting method has proven cheaper, easier and more effective than liquid spraying, using a properly made dust strong in nicotine, with sulphur added for red spider if desired. It is not possible, however, to clean up citrus aphids at one application as completely as can be done with walnut aphids. If conditions are favorable for the pest, several applications may be required in order to hold down the aphids enough to give the young growth a chance to develop. If this is necessary the ease and quickness of the dusting method are of particular advantage.

The citrus thrips is another insect in the control of which the dusting method has peculiar advantages. This insect, like all thrips, is particularly susceptible to nicotine, but is likely to require several applications of the insecticide on short notice for its complete control. Using a dust of moderate strength in nicotine the grove can be gone over very quickly and cheaply and several applications can be made on a large acreage in the time required to spray a few acres once with wet spray.

Beyond the pests mentioned, red spider, aphid and thrips, we have no definite suggestions to offer at present concerning the control of citrus insects by the dusting method. The convenience and cheapness of this method of application, however, the fact that it is so much quicker than wet spraying and that the grower can often do the work himself at odd times and with inexpensive outfit has encouraged the Walnut Growers Association to carry on their work far beyond the original object of finding a practical method of controlling the walnut aphid.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

Funny! It never rains but it pours; it never pours but somebody gets wet; when they get wet they get cross.

* * *

We are referring to editorial rain, for this week is like unto last week, so here are a number of short ones with only a hint of what we would like to say.

* * *

This is fair and show season. We just came from a 15 minute look at the National Tractor Show of the West. Honestly, it is one of the prettiest staged shows we ever saw. Verdugo Woodlands has become a beauty spot and the whole show is so arranged that the seeker after knowledge of trucks, tractors, implements or farm power has the answer handed to him almost the moment he asks it. The Cultivator camera has been in action and next week will give to readers of the Cultivator some of the beauties and some of the real practical lessons from the National Tractor Show of the West. We haven't been able yet to photograph any of the brownies or fairies, but they certainly have been there.

* * *

Then, so long as it is fair season, next week's paper will have a whole

page devoted to San Joaquin County, Tulare County, San Diego County, and perhaps some other fairs. There were never so many fairs; there were never such good fairs as there are this year. And—perhaps it is because we have looked with more earnestness for the real lessons of the fairs—it appears to us that others are studying more to make the fairs of real value to California agriculture or, more particularly, to their own individual cases.

* * *

One man has said: "I never saw such pumpkins exhibited as those at the San Fernando Valley fair." San Fernando is the site of one of the state's oldest missions, and because of that and the fact that thousands of tons of hay were grown over that section only a few years ago, nearly everyone has it definitely located. But there is a new San Fernando Valley. The waters of Mt. Whitney, 250 miles away, are being spread over its soil, and the result has been shown in the fair, only a mere reference to which is made, and some of the awards given, in other columns of this issue.

* * *

Speaking of fairs reminds us of one thing we seriously object to, that is, the school of gambling which is connected with many of them. This is not peculiar to the fairs, unfortunately, for beach and other resorts have the same educational facilities. The principal feature is a wheel of fortune, dice throwing, or other game of chance, for winning a baby doll, a box of candy, a basket of fruit or other consideration of more or less value. According to the article raffled, there are anywhere from ten to 50 chances to win. In one case—a basket of fruit which would sell on the market at perhaps a dollar—one could buy one or 30 chances to secure it for ten cents a chance. If he bought the entire 30 numbers of course he got the basket for \$3; if he bought one he got it—maybe—for ten cents. The basket of fruit was only one of something like 100 different gambling outfits maintained on the state fair grounds. At least, we counted 76 separate booths, each with from one to three individuals attending. At another location there were also a large number. The "baby doll with real hair" joints were the ones which attracted literally thousands of children, and they were taking most seriously that they won or did not win the much coveted doll. The morals of the question we are not discussing at this time, but we do present it as an economic question. Future years may show the real value of the maintenance of these gambling devices. So long as they follow so largely agricultural fairs, we believe it is an entirely proper question for the agricultural legislative committee to consider. Are these institutions advancing the agricultural interests of the state?

* * *

When accompanying the Middle West farm bureau representatives on their recent coast trip, Mr. Teagarden of Placer County, this state, made a most practical suggestion as to true cooperation in marketing the products of the farm and possibly in securing some of the larger farm supplies. Growers of necessity must unite and secure someone so skilled in business matters that he can handle the proposition and make money for the cooperators. People of one community or, perhaps, a large section of the country, whose products are similar can do this, but true cooperation ceases when people of one community organize not

only to produce and market their one product but to merchandise and supply themselves with sugar, tea, coffee, and even papers of pins. The logical conclusion of such an effort is a trust which deprives others of making a living and forces in turn cooperation on the part of the merchants which will ultimately result in a trust. The farm located near a progressive town has higher value than the one near a dinky, forsaken little community center.

* * *

This demurrage business should be reciprocal. At least, that is the conclusion reached by the Yakima Valley (Washington) Growers and Shippers Association. Here it what they say to the general freight agent of the Northern Pacific: "Our association members feel that all shippers in the Yakima Valley have had a very raw deal by the Northern Pacific ordering all box cars out of the valley when the shipping season is at its height and in the face of increased freight rates. We will use our best efforts next legislature to pass reciprocal demurrage law." May they use something besides wadding in their ammunition on the legislature.

* * *

As a suggestion which may be used in settling the present Japanese question, former President Wheeler of our state university offers: "Let the ocean make peace between us." "Mutual regard," "gentlemen's agreements" and all kinds of expressions as to the admirable qualities of the "little brown men" and diplomacy in handling the international situation, all have their place, but when the Pacific is between us, there will surely be peace.

* * *

Those who live in raisinland will be interested in Fred Howard's Zante Currant article on Page 393. There is nothing whatever in the article about currants, that is, real currants, but it does describe, and most fully, the dried grape which is ordinarily passed in American markets as "Zante Currant." These grapes have been grown in the San Joaquin Valley for nearly a score of years, but when sent to the market from that section have failed to contain as much of the gravel of southeastern Europe as has the imported product. Whether this is the reason why they have not been so well received in the market, we are not certain, but there is a helpful suggestion given in Mr. Howard's article of a cultural possibility which may mean much of profit to raisin growing sections.

* * *

One thing peculiar to the Zante currant, and to many other plants for that matter, is the punishment which is required in order to induce bearing of full crops. In years gone by we have referred to the belief of some orchardists that the constitution of their trees called for iron in the sap as it circulates, hence they have driven valuable trees full of old spikes and nails in the effort to supply the iron. How much iron may be taken up or may be needed is a problem, but, plainly, sap flow which is interfered with in many a tree or plant sometimes does result in increased crops.

* * *

Raisin growers are meeting the attorneys of the department of justice of the federal government this week. As yet there has been only jockeying as to legal points. We hope the department will prove true to name. The Los Angeles Times suggests: "The government thinks that the raisin

men are profiteering in the necessities of life. Since the eighteenth amendment has been applied raisins are raisins. The administration has been patient under advances in bread and milk and meat, but if the insidious hand of the profiteer gets into our raisins there's the deuce to pay."

* * *

Some of us, who invested in Liberty Bonds at \$100 per bond and now offer to sell and find them quoted at \$85, are justified in a grouch. That doesn't help—not much, but hero's a suggestion which may: The poor folks who invested the money which they got from selling those bonds in oil stocks are still worse off, for it has been estimated that, averages considered, every hundred dollars invested in oil is today worth but five dollars. In other words, 95 dollars out of every 100 invested in oil stock has been lost. The country will be without oil in the next score of years if the estimates of experts are correct. New oil fields must be developed, so there is call for investment in legitimate oil development on the part of those who can afford it, and there is promise of return—some time. But, as a certain diminutive figure in a popular cartoon often remarks to the tall, slim fellow in the cartoon, "For the love of Mike, be reasonable!" Let's keep our Liberty Bonds and let the other fellow do the developing, at least the wildcatting.

* * *

"The biggest on earth" is again true of California. This time it's population. The state does not yet possess the greatest population of any of the states, but it does show so far the greatest increase both in percentage and in actual numbers. The announcement of the census bureau shows California's population numbers 3,426,536, which is an increase of over a million, or 44.1 per cent in the past ten years. The 1910 census showed a population of 2,377,549. Our area is 155,652 square miles, hence the average is 15.3 per square mile. California was admitted to the Union in 1850, at which time the total population was 92,579. The increase for the decade 1900-'10 was 892,496, so that this year's increase of 1,048,987 is not only the greatest of any state in the United States so far reported, but the greatest numerical increase ever made by California. Great is California!

* * *

The road hog is coming into his own. We recently saw, we believe in Kern County, that one truck driver, in the habit of remaining in the middle of the road and crowding off other machines, had received stiff sentence from the justice before whom he was tried. However, recklessness still flourishes, as is shown by the fact that last Monday in the city of Los Angeles there were 105 automobile accidents. On the same day there were 150 arrests of persons charged with traffic violation.

* * *

Manager Thomas says: "Every foot of space in barns and sheds has been taken, and to accommodate the late comers we have built new barns to cover almost every foot of available space in the great Exposition Park. It will be a magnificent showing of the livestock industry of the Southwest. Livestock is already coming and the gates open Saturday, October 2."

* * *

The course in practical fruit packing recently given to young men and women of the Placerville district of Eldorado County has shown decided results in grade of work done and in returns to the young packers. It is hoped that more work along this line will help to solve the problem of employment of Orientals.

San Fernando Valley Fair

THE "San Fernando Valley Fair and Market" was the name given a most notable display of valley products at Owensmouth, September 15 to 18. Two very large tents housed the exhibits, one of which was filled with livestock, the other with horticultural exhibits, tractors and automobiles. Among the horticultural exhibits the most striking was an enormous market basket, four feet long, filled with peaches and crowned with bunches of black grapes.

The peaches were Phillips Cling (the largest the writer has seen) and the Curry, the latter a new freestone variety of promise originating at Lankershim, the peach center of the valley. The grapes were a new variety, new at least to local territory, known as the Black Damson. They are large, intensely black in color and of good flavor. The ranch whereon they grew was afterward visited and the grapes sampled. They are a good table grape of handsome appearance.

Two booths were filled with ornamental trees, shrubs, etc., one of them having in the foreground a bluegrass lawn. Pumpkins, squashes, casabas

The California Vegetable Union has extended its field of operations far to the north until it has become necessary to bring its crop production department into closer relationship with the producing field. This takes the department to Sacramento, and work of extending the usefulness of the Union in that part of the state will be its principal feature. Presumably this will take Mr. Risser to Sacramento.

Colusa County rice growers have put in duck herders to keep the ducks on the move. Considerable damage is already reported.

Accessibility Counts

There's nothing that gives an owner as much satisfaction as to feel that he is master of his tractor.

This is one of the secrets of Hart-Parr 30's prestige among its owners. It is built for the farmer, not the mechanic.

In less than five minutes you can get at any working part of the Hart-Parr 30, and adjust it standing on your feet, not lying on your back.

THE

TRACTOR TENDER

Makes Fuel Transportation to Any Part of the Field Easy

Saves Time and Labor—Increases Profits

PREVENTS WASTE

You can't lose a drop of fuel with the TRACTOR TENDER when replenishing the fuel supply in your tractor. The tilting lever moves the barrels to any position for drawing fuel. Ratchet locks the barrel in place at any angle. No struggling with heavy barrels—no lifting. One hand does it quickly and easily. No fuel spilled on the ground or wasted. Just a brief halt to fill up the tank and your tractor is working again.

Wipe Fruit to Remove Coating From Late Spraying

Where fruit growers late in the season have sprayed fruit so heavily as to leave a residue on it, the United States department of agriculture urges them to remove the coating by wiping or other means that will make the fruit acceptable in the market. One method recommended for apples and pears, which can be followed at a cost of a few cents per box, is to wipe the fruit with cotton gloves. It is pointed out that if heavy rainfalls do not occur after heavy late sprayings the coating that remains may disfigure it sufficiently to arouse apprehension in the minds of the consumers, even though the residue may be entirely harmless. In some cases, however, heavy late spraying has been sufficient to be actually injurious and so subjects such fruits to seizure under state or federal food and drug laws.

Where apples and pears when harvested show evidence of spray residues which have not been removed in picking, handling, grading and packing, it is recommended that such fruits be systematically wiped before being placed on the market or packed for shipment. While this precaution is applicable to all fruit sprayed late in the season, it is especially important in the more southern apple districts

where the grower is often compelled to spray late to protect the fruit against bitter rot, and in irrigated orchards of the West and Northwest where protection of apples and pears against the later broods of the codling moth is secured by spraying with arsenate of lead.

While at this season the department's specialists are laying emphasis on the importance of wiping fruit that has a residue from spraying, they also take occasion to urge that no grower should suppose fruit injury resulting from neglect of proper spraying early in the season can be corrected by belated spraying. Heavy late spraying undertaken in an effort to make up for what should have been done earlier is strongly condemned.

The practice of spraying growing fruit properly marks one of the most important steps in horticultural progress and is responsible, to a large extent, for the sound, attractive appearance of fruit now on the market, which is in marked contrast to the insect injured and disease spotted fruit so prevalent a few years ago.

District about Red Bluff in Tehama County is harvesting fine crop of prunes; hop crop is of exceptionally fine quality.

REORGANIZING

For some months officials of the California Prune and Apricot Growers, Inc., have been in conference with members of the federal trade commission, discussing matter of organizing and putting the cooperative association in a stronger position, especially with regard to any feature which might be in conflict with anti-trust legislation. The board of directors and trustees of the association recently met in San Jose and voted to change the form to a non-capital membership association. Reorganization will be begun immediately by altering the form of contract with growers now uniting with the association. The reorganization will be completed in 1922, when all of present contracts between association and 10,000 grower members expire.

In statement by the California Prune and Apricot Growers, Inc., it was said that the federal trade commission always has recognized that the prune association could not in any sense be looked upon as a monopoly because of the already large and steadily increasing Oregon and Washington prune productions.

Justifying the commission's attitude it was pointed out that the Oregon and Washington prune crop this fall will total approximately 80,000,000 pounds as compared with the estimated California yield of about 175,

000,000 pounds. Of the combined production of 255,000,000 pounds the California Prune and Apricot Growers, Inc., markets less than one-half.

FAIR PRICE FOR PRUNES

The Cultivator recently used on its little news note page: "Prices named on prunes by the Prune and Apricot Growers Association are from a cent and a half to three cents higher than last year," which was entirely correct and yet entirely wrong. It was entirely correct as to prices on fine large size "luxury class," but as to the regular food prune a price far in excess of what consumer pays. This called for comment from one of California's cooperators, also an attorney, of San Francisco, Aaron Sapiro. Mr. Sapiro writes:

"If you will compare the opening prices for 1920 prunes with the opening prices for 1919 prunes, you will find that there was an increase on so-called luxury sizes, but that on some ordinary sizes the prices are one and a half cents lower than last year. For example, on 80/90s the price is 9½ cents a pound, as against 11 cents a pound last year. Contrary to the usual accuracy of your statements, this particular item is somewhat lacking in precision."

We appreciate the correction. We are always glad to be set right

ALLOTING DELHI

Unit No. 1, comprising 1,191 acres in the Delhi Land Settlement, was opened in May last; Unit No. 2, comprising 2,832 acres, is now to be opened and application, accompanied by five per cent of the cost of the land, may now be made. Other payments on the land may be made during the next 36½ years with interest at five per cent. Another unit of 1,540 acres will not be opened until January, 1921. Walter Packard is superintendent of the tract and will give full information.

THE ZANTE CURRANT IN CALIFORNIA

(Continued from Page 393.)

Interest Keen in Valley

The interest in this new variety has been very keen during the past few years. This has been particularly true since it has become more generally known that the federal men in charge of experimental work have at last found a means of growing a good crop. There are, of course, several very good reasons for this interest, the most important being the fact that the fruit ripens during the latter part of July and requires only two or three days in the sun before stacking and from 10 to 15 days in the stack. This allows the grower who is producing both Thompsons and currants to use the same equipment for both crops. One other reason is that there is a feeling that with the extensive planting of the Thompson Seedless in the valley there is a danger of it being overdone. This fear may be well founded, though officials of the Raisin Association feel that there is little danger of overproduction so long as the association is maintained at its present status.

There are at present approximately 250 acres planted to the Panaritl in the San Joaquin Valley and where girdling has been practiced satisfactory crops are secured. Ten tons of fresh fruit to the acre is not at all uncommon, and when picked at 26 to 28 per cent sugar content it requires three and a quarter to three and a half pounds of fruit to make one pound of currants.

Vine Is Very Vigorous

The Zante currant vine is a very vigorous grower, in fact, much more so than the Thompson, and its lack of fruitfulness unless girdled has been attributed to its excessive vigor. The common practice by growers of the currant is to stake and trellis in the same manner as is done with the Thompson. It is also pruned to long canes, leaving short renewal spurs to secure satisfactory new wood for the coming season.

The operation of girdling is ex

Power You Can Rely Upon

To make you the most profit, each of your different farm operations must be timely. Often weather conditions call for extraordinary effort. It is then that you can count on the dependability and rugged power of the Waterloo Boy.

WATERLOO BOY

BURNS KEROSENE COMPLETELY

It gives you dependable service at small operating cost. Its twin-cylinder engine develops full 12 H. P. at the drawbar and 25 H. P. on the belt, using kerosene as a fuel. A patented manifold converts every drop of this low-priced fuel into power. Two gallons of kerosene per acre is the average amount used when plowing.

The cooling system always holds the engine at the proper temperature. While the motor runs at the right temperature for perfect lubrication,

enough heat is maintained to insure complete combustion and full power. The radiator holds thirteen gallons of water. You don't have to stop in the field every few hours and fill it.

The Waterloo Boy is especially strong and rugged. Its various parts are designed to meet every possible strain. Every part is easy to get at. The engine runs without vibration. Its well-balanced weight provides proper traction in soft ground.

Buying a tractor is an important investment. We have a booklet describing the Waterloo Boy fully. Drop us a postal card or letter today. Address John Deere, Moline, Illinois, and ask for booklet WB-57.

pensive and requires the close supervision of the grower to be successful, and where the girdling is done on the main trunk there is considerable danger of severely injuring the vine, if indeed it is not killed outright. Continued girdling for a period of years is apparently quite harmful. Hoping to overcome this undesirable feature of the industry Elmer Snyder, who is in charge of the government vineyard at Fresno, has been experimenting with cane girdling during the past few years and finds that this method is as successful as when trunk ringing is practiced, and there is no danger of permanent injury to the vine. Mr. Snyder is also developing

Girdling Increases Crop

Upper: A girdled cane. Note width of incision and condition of bloom, showing proper time for the operation.

Lower: A trunk incision. This grower leaves a strong shoot below the girdle to insure against the possibility of losing the vine.

a tool which promises to reduce the cost of the work of girdling. Shipments of packed fresh Zante currants to Eastern markets brought very attractive prices last season, but this season's prices were a disappointment to both growers and shippers, the fruit bringing in the East between two and three dollars per crate. Several reasons have been assigned for this, some shippers feeling that the consuming public is not yet educated to the point where it appreciates this new fruit, and also that carlots were too much to be shipped to any one point. It is possible also that the name "currant" had much to do with its acceptability to the housewife who sees or hears the word currant and thinks of jelly. Its value as a raisin grape is well established and the disappointing prices received for the fresh fruit this season will probably not retard planting to any great extent.

Questions and Answers

Skin Troubles of Rabbits

My New Zealand rabbits have fur all ruffled up and they scratch and bite at it, but I cannot see any lice. Will you please tell me what is the trouble?—Subscriber, Lodi.

The first thought is that lice cause the trouble. Again, by improper feeding the moult is slow and causes irritation, urine may wet fur and cause skin irritation, or maybe some of the

following, for which we give remedies: Fleas—Rub animal with rag dipped in coal oil gently over fur; disinfect hutches with same. Do not put the coal oil in nests, however. Eruptions—small sores found in spots, causing hair to fall off. Impure air and filth are the cause; remove cause. Skin diseases—Examine skin for scales as in other animals. Sulphur and lard rubbed well into skin; second day wash with warm water and castile

soap; next day use the sulphur and lard; follow with soap and water—two applications should cure; use care in this, as mange is infectious.—W. D. W.

Ant Poison

In one of your back numbers you printed a formula for ant poison, but the paper has been destroyed and I wish you would publish it again. The ants are the common sort, a little larger than the ant which usually invades houses. We have recently moved on this place and the yard is full of ant holes and the house overrun with them.—Subscriber, Hanford.

The best control of ants is to follow the trail to their holes and pour in boiling water, gasoline, carbon bisulphide, or a solution of cyanide of sodium. The California Cultivator of August 9, 1919, shows method of placing poison in small containers on trunk of tree. This formula is now generally recognized as a standard for this pest and is made as follows: Prepare a syrup of granulated sugar, 15 pounds, water 7 pints, tartaric acid (crystallized) ¼ ounce, boil for 30 minutes. Allow to cool. Dissolve sodium arsenite (chemically pure) ¾ ounce in 1 pint hot water. Cool. Add poison solution to syrup and stir well. Add to poison syrup, honey, 1½ pounds, then mix thoroughly. Distribute as suggested above or in any container which will admit the ants and at same time not endanger children or pet stock. A very simple and effective poison is three tablespoons of honey and tartar emetic the size of a Lima bean. Mix and put in two or three saucers and place where ants are proving troublesome. We may add that there are a number of most satisfactory repellents and poisons offered in the market. An ant paste which has been advertised for years in the California Cultivator does exceptionally good work. This year's ant infestation has been so serious that in addition to using liberally of buhaach and other insect powders some have bought all types of poisons available and located around the house and other buildings.

Citrus Nursery Stock

Please tell me when is the best time to plant orange seed for stock to bud on? Is it good to give the bed a sunny situation?—Subscriber, Escondido.

The stock usually preferred is the ordinary sour stock, or bitter Seville. There are two methods of sowing the seed, broadcast or in drills, or rather trenches, eight to 12 inches wide, leaving, say, eight inches space between drills for the running of the water. This insures stockier and hardier plants than broadcasting. The seed may be planted in the spring. They are given summer's growth and lifted from the drills, or trenches, the next spring and placed in nursery row, care being exercised to discard all excepting most thrifty plants. Ordinarily these plants are left in open sunlight but some nurserymen prefer seedbed under lathhouse. Probably the greater number are so grown.

Spinach Dying

A subscriber has asked as to what makes spinach planted in August die almost as soon as it comes through the seedbed. We questioned as to whether it was not mere matter of heat of sun on unprotected seedbed. However, the question was referred to D. G. Milbrath, who writes:

"From the meager information at hand concerning that particular field, I can only venture to say that that party is probably attempting to make a winter variety of spinach grow during the hot summer months. On a small scale, I would advocate New Zealand spinach for the summer garden. Lately I saw some very fine spinach of this variety produced in Maryland and Virginia."

Layering Black Walnuts

I have tried many times to grow black walnuts and have not succeeded. Is there any preparation which the nut has to go through prior to planting, and what time to plant is best?—Subscriber, Venice.

The seed from the native Northern California Black is usually preferred for stock. These are gathered in the fall and planted soon after, by some in nursery row. However, the usual

Just a Glimpse in the State Fair Horticultural Building

Upper display is that of Fresno County. The middle shows the spirit of Los Angeles, presiding over fruits of that county. The bottom feature is that of Sacramento County with its three great arches. Photos by McCurry, Sacramento.

The advertisers in the California Cultivator are known to be reliable and we recommend them to our many subscribers.

method is to stratify. From "Walnut Culture in California," by Ralph E. Smith, we quote:

"Walnuts to be used for planting in the nursery should, after gathering, be kept in sacks or other receptacles in a cool, not too dry place until planting time. If allowed to become extremely dry after gathering the nuts germinate much less easily than otherwise. They will usually keep in good condition if tied up in sacks and piled in a cool, shady place. It may be found desirable to allow the outer hulls to dry somewhat before sacking up the nuts, especially in the case of large hybrid nuts, since if sacked and put away quite green the hulls decay and become extremely soft and mushy. Early in the winter, not much later than January, the nuts should be layered in sand or light straw earth in order to sprout them and segregate the best ones from those that germinate feebly or not at all. This is most conveniently done by constructing a frame about 18 inches deep, either above or below ground, in the bottom of which should be placed three or four inches of sand, then the layer of nuts, which may be either one or several nuts in depth, according to the available space. The nuts are then covered with three or four inches of sand, which should be washed down thoroughly between the nuts by means of a stream of water. The whole bed will thus be in a well soaked condition by the time it is done. Instead of placing the nuts directly in the bed, it is more convenient in getting them out to put them in shallow wooden boxes or flats, imbedding these in the sand as above described. If this is done it is much easier to get the nuts out for planting than if they are placed directly in the sand. Other materials may be substituted for sand, such as earth mixed with fine straw or manure, or any substance which holds moisture well, and from which the nuts can be easily removed. The bed should be so arranged that water will drain away from it and not accumulate sufficiently to rot the nuts, and it should be protected from rain if there is any danger of such an effect from that source. The nuts need to be constantly well moistened, however, to start germination, and if drainage is good there is not much danger of getting them too wet. The bed should be located in a place where it will receive the heat of the sun in order that it may not be too cold for germination, and it may be underlaid with manure if it is desirable for any reason to hasten the sprouting of the nuts. Nuts of the different species vary quite widely in respect to freedom of germination, those of the Southern California black walnut being especially quick to sprout. These also rot more easily than other black walnuts. They need not, therefore, be put into sand so early and should not be kept as wet as Northern California blacks or Royals. The latter especially need much moisture and warmth to make them sprout. For prompt and uniform germination they should be put into the sand quite early, in a single layer of nuts, and be kept well moistened and as warm as possible. Otherwise many will not sprout until the second or even third year, if they be put into the ground before starting to germinate."

As soon as the nuts are sprouting or starting their growth they may be carefully transferred to nursery row.

Killing Dodder

Noting your remarks on the destruction of dodder in alfalfa, I would like to give my experience, as it may aid someone. Dodder appeared in a patch of alfalfa which I was raising for my chickens. Having no blast torch and not wishing to search for one for so small a job, I sprayed the infected alfalfa plants and the dodder with a strong salt brine. It killed the dodder effectually while with the next cutting the alfalfa in that spot came on in good shape.—Subscriber, Anaheim.

Immense Peach Stock

What kind of root could peaches be budded on that is or would be immune to nematodes?—J. D. H., El Cajon.

We know of no stock that is more nearly immune than the others that are used for peaches and can find no one who does. Very little, if any, work has been done along the line of re-

sistant stock investigation, and from a knowledge of the stocks available we would venture the opinion that little difference will be found in the sorts used for peaches.—E. B.

Making Sorghum Syrup

Would like to know if there is a bulletin printed on how to make sorghum molasses. If so, where could one get one?—Subscriber, Escondido.

Write College of Agriculture, University of California, Berkeley, and ask for Circular 198, "Making Syrup from Sweet Sorghum."

Seed Wheat

An inquirer wishes to know as to planting wheat grown on his own place for past two years. The question was referred to Geo. McLeod of the agricultural department of the Sperry Flour Co., and he answers: "If the inquirer is satisfied with the variety of wheat he is sowing, and if it is free from smut and withered grains, nothing would be gained by exchanging it for other wheat. Any variety

of wheat can be made better by selection and grading. All seed wheat should be cleaned in order to remove the immature kernels and foreign grains. If this system is followed out from year to year a variety of wheat will gradually become better even though it is planted on the same soil."

EXODUS OF MEXICAN LABOR

A consular report from Mexico states:

"One manifestation of an awakened spirit in the peon class has been a steady exodus of laborers with their families to the United States during 1918 and 1919. This movement now (March, 1920) has assumed such importance as an economic problem that the government is concerning itself with ameliorating industrial conditions in favor of this class of people."

A vacancy in the office of deputy county horticultural commissioner of San Luis Obispo County calls for examination of candidates. Harold E. Allen is commissioner of that county.

ANNUAL OF LEMON MEN'S CLUB

(Continued from Page 395.)

cellence of its organization manifest in its frost fighting equipment and the methods of going into action when the need comes.

On the ranch there are some 400 employees to care for the 390 acres of 27 year old and 550 acres of four to 12 year old lemons, 75 acres of 20 year old and 160 acres of 30 year old walnuts.

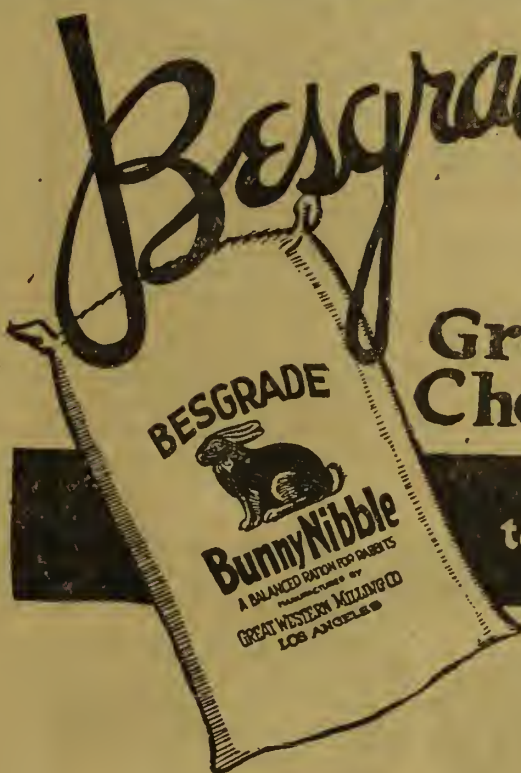

But the lemon grower who took in all the lessons of a great day of practical talks in practically managed orchards by practical men will not be able to put all the lessons into practice at once; neither can the poor newspaper man who would tell all of one great day in one short story.

The California Cooperative Canneries, with headquarters at San Jose, advises that the application for a complaint against that concern to the federal trade commission has been investigated and dismissed.

Besgrade Bunny Nibble

Grows Rabbits Cheaper & Better

these testimonials prove it

ROLLED barley and alfalfa will grow good rabbits, but Besgrade Bunny Nibble will grow bigger and better rabbits in much less time and at less cost per pound.

Besgrade Bunny Nibble costs more than rolled barley, per pound, but is much cheaper per unit of digestible nutrient.

It is a "Clean and Good" feed, containing just the correct amount of protein, carbohydrates, fat, etc., in the most digestible form to insure the most rapid and healthy growth. It is especially good for feeding to nursing does.

More care and science in feeding rabbits should be the aim of every rabbit breeder. It will not take long to prove that such methods are more profitable than haphazard methods of feeding unbalanced rations where the rabbit gets more of one food element than it can assimilate and not enough of another.

If the same care in feeding balanced rations were followed as is used in breeding pure bred more profit would result.

Years of experience in the manufacture of balanced rations is back of Besgrade Bunny Nibble. It is a feed you can absolutely rely on because it is guaranteed.

Trial Offer

For the convenience of rabbit breeders who are unable to secure Besgrade Bunny Nibble from their local dealer, we will ship by parcel post a 25-lb. sack for \$1.60, or a 10-lb. sack for 75c, f.o.b. Los Angeles. Postage will be added and feed shipped C. O. D.

If your dealer can supply you your price would be lower, as he does not have to collect for postage or handle for mailing.

Sugar Beet Growers

SUGAR beet growers from various sections of California gathered in Hilgard Hall, Berkeley, last week and discussed possibilities of greater development of sugar beet growing or, as stated by the farm bureau which called the meeting:

"The general purpose referred to a more comprehensive development of the sugar beet growing industry of the state, the need for a departmental organization of growers, a better understanding of economic conditions affecting the sugar beet industry, the acquiring of highest grade beet seed supply, and more uniformity and equity in growers contracts. Attention was called to the fact that growers in Utah, Idaho and Colorado beet raising sections were successfully cooperating for better growers contracts with sugar companies and that ultimately an interstate organization among growers might be expected. The interest of the California Farm Bureau Federation in the beet growing industry, it was explained, referred primarily to the giving of service which would enable growers to get together for the betterment of the industry in all its phases.

Professor R. L. Adams of the division of farm management addressed the conference on the general subject of production and conditions under which growers in the state are operating. A review of growers contracts in force in the state was presented, together with comparisons on returns to the farmer.

During the discussion the following chart was presented on the blackboard. Based on existing contracts in the state, this chart compares returns per ton for beets to the grower in different sections of the state. For convenience two grades of beets are considered (beets containing 15 per

cent and 20 per cent sugar), and a scale of two prices (10 cents and 15 cents per pound) of sugar presented. The figures in the chart columns indicate the returns per ton received by the growers under the different forms of contracts.

	Sugar in Beet 15 per cent.		Sugar in Beet 20 per cent.	
	Price of sugar per lb. 10 cents	15 cents	Price of sugar per lb. 10 cents	15 cents
Southern California Factories.....	\$13.33	\$19.16	\$17.77	\$26.65
Union Sugar Company.....	10.00	15.00	10.00	15.00
Spreckels Company	10.00	15.00	13.00	18.00
Alameda Company:				
Outside sliding scale.....	10.75	15.75	13.50	18.50
Outside flat rate.....	9.50	9.50	9.50	9.50
Local sliding scale.....	10.00	10.00	13.00	13.00
Local flat rate.....	11.00	11.00	11.00	11.00
Utah-Idaho Sugar Company.....	13.33	18.01	17.78	26.68

Without discussion in detail it will be noted that for the same grade of beets material difference in price is often obtained by the grower at the present time.

Following the address by Prof. Adams a general discussion of prevailing contracts and practices ensued. Among other matters the discussion indicated:

(a) That growers preferred payment for beets on a sliding scale based on sugar content in the beet and the variable price of sugar.

(b) That scale weight at delivery points was desired in preference to weighing of beets in cars.

(c) That growers' sugar testing laboratories were desirable to better learn field and selling conditions.

(d) That effort should be made for using uniformly clean and viable seed and seed free from morning glory and obnoxious weeds.

(e) That more uniformity in wage

scale for standard culture operations be sought.

(f) That information for growers be obtained with reference to European sugar supplies and stock on hand.

(g) That departmental organization properly financed be perfected in counties through the county farm bureau and through the state farm bureau federation.

(h) That a uniform growers contract for the state be presented.

The following resolution was presented by Mr. Dougherty: Moved that the secretary request an immediate investigation by the American Farm Bureau Federation relative to the status of sugar production in beet sugar districts of Europe for the year 1921. Duly seconded and carried.

The following resolution was adopted by the conference: "Moved that this body be and represent the beet growers department of the farm bureau and that it take charge of the beet growers' interest, draw up a beet growers' contract, and be retained and held together until county and state organizations of sugar beet growers are fully perfected, and that other counties not now represented be solicited to have representation and take part in all activities."

The conference then took up the consideration of a uniform growers' contract for the state, special consid-

eration being given to sliding scale contracts in force in Southern California. It was duly moved and carried that the contract form in present use by the American Beet Sugar Company be adopted with the following modifications and additions:

Paragraph 2 of the contract to read as follows:

2. Recleaned seed free from obnoxious weed seeds and of not less than 80 per cent germination, will be furnished by the company at — cents (\$—) per pound, and none other shall be used. Seed furnished by the company shall not be planted upon any land not covered by this contract; and seed furnished and not planted shall be returned in good order to the company and the grower credited therefor.

In paragraph 4 of the American Beet Sugar Company contract the word "Southern" be eliminated.

An added paragraph 10 to be inserted as follows:

It is mutually agreed that for the support and maintenance of the—county farm bureau beet growers department there shall be deducted by the company an annual assessment charge in the sum of 5 cents per ton on all beets delivered by grower and such sum after deduction shall be paid into the treasury of the—county farm bureau beet growers department. (Any sums deducted as above and remaining in the treasury at the close of the season of 192—, shall be prorated to the grower on the basis of tonnage of beets delivered.)

An added paragraph 11 to be inserted as follows:

Disagreement between growers and factory in the fulfillment of this contract or any portion thereof shall be arbitrated between duly appointed representatives of the—county farm bureau beet growers department and factory representatives.

It was moved by Hart that the American Beet Sugar Company contract as above reviewed and amended be the contract form adopted as expressing the sentiment of the committee (conference) present, and that a committee be appointed to take up the acceptance of this contract by the American Beet Sugar Company at Oxnard, and also get into touch with other beet sugar companies for its acceptance and adoption by such companies for the 1921 season. Motion duly seconded and adopted.

The chairman upon recommendation of delegates appointed the following committee: Fred J. Hart, Salinas; Chas. Donlon, Oxnard; A. W. Haley, Newark; Alex. Main, Lompoc; Clarence Dougherty, Artesia.

W. H. Heileman presided at the sessions of the conference.

POTATOES AND COVER CROPS

By Ernest Branton

TIME was when potato growers produced two crops a year in the same soil. The first crop was planted in March, harvested in late June or early July, cured for a few weeks and replanted (from spring seed) in July or August. Of late years they have found double crops do not pay so well as single crops alternated with cover crops.

Some plant an occasional field to alfalfa and allow it to grow from two to five years before turning under. The next year potatoes do not seem to be specially benefited but in the second and following years the alfalfa shows its value. In sewer farm districts more fertilizer is not often needed and rye is grown for the humus it adds to the soil, surpassing in this respect any other cereal crop. On the Oleson potato fields near Van Nuys in the San Fernando Valley, and the McSweeney fields near Alhambra in the San Gabriel Valley, a winter crop of Melilotus Indica is the main reliance, though other crops are somewhat used and some experimental work is carried on each year.

On the McSweeney ranches over 400 acres will be put in melilotus beginning about the first of September and continuing as fast as available water supply will allow soil to be brought into proper condition. All cover crops have been proven of value to succeeding potato crops. Rye has brought good results but melilotus is favored because more succulent and therefore more quickly assimilated. Not all the

Quick detachable shares.

Everywhere you will find the Heider solving the shortage of man power on the farm. Thousands of Heiders have worked every kind of soil in America and a score of foreign lands. A ready power for plowing, disking, harrowing, seeding and harvesting. A dependable belt power for silo filling, operating threshers, etc.

12 Years' Actual Field Work

That's the big record of performance back of the Heider—your assurance of a reliable, economical tractor—12 years' success in the field is your guarantee.

No Clutch, Transmission Gears or Bevel Gears

Famous Heider friction transmission eliminates these gears—it means no expensive gear-stripping—all three units are in one—15% to 20% fewer parts. With the Heider friction drive there is no jerking, no jumping, no vibration. It is a steady power—like electric power. Gives 7 speeds forward and 7 reverse, all with one motor speed and one lever for traction or belt.

cover crop acreage noted goes into potato fields for much of these ranches is in citrus orchards, but melilotus in September is the program throughout. All cover crops are supplemented with commercial fertilizer. One alternating crop, tried for the first time this year, is a variety of corn known as "Eureka Ensilage." Up to present date it has made the largest growth of any yet tried on this ranch. The potato grower does not rush the season with cover crops for Mr. McSweeney says his best crops of White Rose potatoes come each year from planting from March 15 to 30, surpassing in both yield and quality those planted earlier. This year the summer planting began July 19.

COTTON QUARANTINE STRENGTHENED

(Continued from Page 397.)

of agriculture disinfects an average of 90 cars per month, live steam being the method used in disinfecting.

The possibility of the introduction of cotton pests through the medium of second hand gins and cotton harvesting machinery was considered, and these commodities will only be admitted to California under very strict measures of disinfection. Second hand cotton picking bags and burlap that has been used in any connection in the ginning or manufacture of cotton or cotton seed by-products were shown to be a material danger to the cotton industry, and will be prohibited entrance to California. The bringing into California of emigrant movables by train or automobile was admitted to be a menace and measures were adopted for close inspection and, if necessary, disinfection of these articles.

That there was keen interest in the meeting was evidenced by the number and prominence of those present in the different branches of the cotton industry, all of whom indorsed the action taken.

The several cotton interests were represented by H. B. Atha of the Arizona Egyptian Cotton Company; Ralph Murphy, a Salt River Valley cotton grower; W. H. Knox of the Arizona Cotton Growers Association; S. H. Hastings of the Southwest Cotton Company; A. F. Osterloh of the Goodyear Tire Company; E. M. Fowler and A. W. Turner, cotton brokers; K. D. Oliver, manager of the Imperial Valley Growers Association; W. E. Keller of the Globe Mills; and Geo. P. Clements, manager of the agricultural department of the chamber of commerce.

The state of Arizona was represented by E. W. Hudson, chairman of the commission of agriculture and horticulture, Andrew Kimball of the commission of agriculture and horticulture, and Don C. Mote, state entomologist of Arizona. Lower California was represented by O. A. Pratt of the federal horticultural board.

California was represented by G. H. Hecke, director of agriculture; Frederick Maskew, chief quarantine officer; L. A. Strong, deputy quarantine officer; C. H. Vary, deputy quarantine officer; Harry S. Smith, entomologist in charge of pest control, and D. B. Mackie, field entomologist. F. W. Waite, county horticultural commissioner of Imperial County, represented the county of Imperial. Harold Pomeroy of the Kern County horticultural commission represented Kern County, and W. B. Camp the U. S. department of agriculture.

BULLETIN ON ALFALFA CATERPILLARS

A new farmers' bulletin of more than ordinary interest to Southwest farmers is Farmers' Bulletin No. 1094, "The Alfalfa Caterpillar," written by V. L. Wildermuth, entomological assistant, cereal and forage insect investigation. Mr. Wildermuth has been located at Tempe, Arizona, for a number of years and is probably more familiar with the insect pests which feed upon Arizona crops and plants than any other man in Arizona. The yellow butterfly or alfalfa caterpillar is the most destructive alfalfa enemy that Arizona farmers have to contend with. This bulletin, which represents the study of this insect for a period of several years, is of much value. It may be obtained from the U. S. Department of Agriculture, Washington, D. C., upon request.

FAIRBANKS SCALES

*Your Weights Measure
Your Farm Profits*

THE RESULT of your every day work, be it much or little, is valued upon your farm scale.

Every cent of money—every minute of time—each ounce of energy—put into your work finally is checked by your scale.

Important to have an accurate Fairbanks Scale for wagon and stock use!

For 90 years Fairbanks Scales have been the world's standard of accuracy—a prestige maintained by quality built in at the factory.

Easy to install—at small cost. Once present, this scale becomes the standard in your neighborhood by which all other weights are judged.

Make Your Fruit Trees Bear to Capacity

Fruit growing is no longer a matter of chance. Experience has shown that when fruit trees are fed right they bear to capacity.

Bradley's Standard Fertilizers

"THE WORLD'S BEST BY EVERY TEST"

give your fruit trees the plant food they need for greatest production. They help to produce a heavy set of fruit and the new wood needed for the next crop. They keep the fruit growing.

The Los Angeles Show

Details of the program of the great Los Angeles Livestock Show will be given in our next issue. Judging dates, even the hour at which judges will be working in their different classes, will be given. That number will not only give details of the judging of livestock but of events at the kennel show, rodeo, milk goat, poultry and rabbit exhibits. The show will contain the finest collection of animals

yet gathered in the Southwest. As a bit of advance information we may say that on opening day, Saturday, October 2, the rodeo, horse racing and amusement events will all take place in front of the grandstand. Sunday there will be a parade of livestock with all barns and grounds open to the public.

Monday, October 4, judging will begin on Holsteins, Aberdeen-Angus,

Guernseys, Percheron horses, saddle horses, Tamworth and Yorkshire swine and milk goats.

Judging dates and hours for Tuesday and other days will be given in detail. There will be pages which will make the Cultivator of almost equal worth with the regular program to be distributed on the grounds. Livestock judges appointed to date include:

Beef cattle, F. W. Van Natta, Fowler, Indiana; dairy cattle, Prof. H. H. Kildee, Ames, Iowa; horses, Prof. E. A. Trowbridge, University of Missouri, Columbia, Missouri; Jersey and Ayrshire cattle, Geo. E. Platt, Los Angeles; Duroc-Jersey, Berkshire and Poland China swine, Prof. J. I. Thompson, Davis; sheep, Hampshire and Tamworth swine, C. R. Doty, Los Angeles; goats, C. H. Bowman, Los Angeles. Poultry judges include E. E.

Emerson, Burbank; Guy Goodacre, Compton; J. L. Harrison, Pasadena. Louis Salisbury, Pasadena, judges rabbits. Pigeon judges are J. H. Blumenburg, Huntington Beach, and R. W. Wales, Altadena.

Thirty boys and girls pig clubs have entered their swine. There has been a special barn provided for pig club displays, which will be in charge of farm advisers. The youngsters will exhibit Duroc-Jersey, Berkshire and Poland China pure breeds and a number of fat swine.

Exposition Park is easily reached from all parts of Los Angeles. The automobile entrance is from Figueroa Street. Free parking space is provided for several thousand machines. Numerous five cent street car lines run from all railroad stations to the show grounds. General admission to the show is 50 cents.

General Livestock

September 15-18, Chas. L. Schufeldt, Mgr., Owensmouth.

One of the new factors in the up-building of Durocs in California is found at the William V. Mong breeding establishment at Whittier, and known to the swine breeding public as "Your Duroc Farm." Mr. Mong has entered the pure bred swine breeding field with the fixed determination, first of all, to cater to the wants of his neighbors and their neighbors. At the head of this herd is the junior yearling boar My Pattern, sired by Col. Cherry King, first prize aged boar at the International, 1919. On August 24 he measured 68 inches length, 38 inches height, 64 heart girth, 66 flank, and tipped the scale at 545 pounds. Three of the leading sows are safe to his service for fall litters. Prominent among the brood sows are Great Wonder's Belle, daughter of Great Wonder. A young boar and gilt of her March 17 litter, sired by Winsor's Giant Orion, are slated for exhibition at the fall fairs.

One of the features of Duroc interest at the state fair was the banquet given by the state Duroc Breeders Association for its members and a limited number of guests. Plans were discussed for general promotion work and much enthusiasm aroused. With the capable assistance of Field Secretary Anderson, the Duroc breeders are in line for great advancement in the near future. At their business meeting V. F. Dolcini, Davis, H. C. Witherow, Live Oak, and H. M. Berglund, Dixon, were elected directors for the northern district. The central district will elect three directors at a meeting to be held during the Fresno fair. The three directors for the southern district will be elected during the week of the Los Angeles fair.

Bassett Bros., Hanford, won at the state fair the two silver cups offered on Poland China barrows and the silver coffee set for greatest number of futurity ribbons. Hugh Shinn, Tulare, won silver trophy offered by the Poland China Journal for the best four gilts under one year bred by exhibitor.

Plans for the auction sale of prime cattle at Cottonwood are being held in abeyance awaiting the arrival from the mountains of various herds. Some of the cattle in this section are a little late in their return to home ranges,

and it was deemed advisable not to attempt a sale at this time with the stock available. J. E. Hewston, field representative of the California Cattlemen's Association, called a conference of stockgrowers of the Cottonwood district and it was unanimously agreed that the entire plan of auction sales of prime cattle was on trial in California and that success was impossible unless really fat cattle were put up at auction. Mr. Hewston pointed out that buyers would soon cease going to such auction sales if feeders and dairy cattle were put in as has been the case in some recent sales.

Encouraged by the success of their recent public sales of registered Berkshire breeding stock, the Southwestern Berkshire Congress is announcing a bred sow and open gilt sale for Thursday, October 7, at Exposition Park. This offering is of a character to interest the breeder, the pig club boy or the rancher.

In this sale are 215 bred sows, selected because of their useful character and coming from established herds with a reputation to be kept up through their offerings at public and private sale. The ten younger gilts to be sold open are excellent material for boys pig club work or for being developed into good brood sow material for well established herds. A breeder's guarantee goes with every animal in the sale.

Announcement is made of a combination sale of breeding stock from the well known herds of E. Avery Newton at Lankershim and H. Christiansen at Arlington. For the con-

No danger of raising a crop of weeds when you plant Germain's high-test Melilotus Indica seed. Each bag carries a certificate of quality, a replica of which is shown above.

DAVENPORT'S

Ideal Orchard CULTIVATOR

Few implements are used more in California than the Orchard Cultivator. Davenport's Ideal represents sturdiest construction, light draft and rigid framework. Either spring tooth or rigid standard. Not a horse killer, but a real implement with no waste material or dead weight.

DAVENPORT'S

Riding Attachment For Walking Plows

You can make a riding plow out of any steel or wood beam walking plow by attaching the Ideal. We have both walking plows and attachments in stock.

Davenport Implement Co.

venience of the buying public the sale is to be made at Pomona at the Lookingbill and Vezey Union Sale and Stock Yards, with Col. W. C. Lookingbill in charge. The sale is to be made on October 27, and is to be featured as "a pre-breeding season sale." It will consist largely of yearling and two year old tried sows and promising gilts of breeding age and representing standard big type blood with first prize and grand championship honors to its credit.

Guy H. Miller of Modesto reports Register of Merit tests recently completed by Gladys of Venadera and Signora of Venadera, both daughters of his old herd sire, Altama Interest. Gladys of Venadera produced 508 pounds and Signora of Venadera 525 pounds of butter fat in the year. Both cows were milked but twice daily and were with the milking herd throughout the year.

CONSIGNING TO NATIONAL DAIRY SHOW

Toyon Farm Association is consigning ten remarkably strong individuals to the dairymen's sale to be held in conjunction with the National Dairy Show at Chicago in October. This show is the greatest event in the dairyman's year. The Toyon consignment is headed by Sir Pietertje Ormsby Mercedes 43d, senior herd sire and the only bull enjoying the distinction of having been bred to three 30,000 pound cows. A young bull sired by Chima-cum Spring Farm King Pontiac and from a first prize junior four year old cow with a ten months record of 904 pounds of butter, completes the male entries for the sale. The eight females consigned include a two year old daughter of Sir Pietertje Ormsby Mercedes 43d, two two year old daughters of Sir Korndyke Ormsby Piebe—one finishing her year with better than 900 pounds of butter and the other with better than 800 pounds, both from over 20,000 pounds of milk; a remarkably large two year old daughter of Sir Johanna Ruth Fayne, sire of the present holder of the world's record for one day's milk; a four year old cow with 703 pounds butter made in 268 days to date of her present long time test; a five year old with 900 pounds butter as a junior four year old now finishing her year with over 1,000 pounds butter.

DAIRY CATTLE CONGRESS

The eleventh annual dairy cattle congress will be held in Waterloo, Iowa, next week, September 27 to October 3. This congress was established for the express purpose of advancing the best interests of dairying and the breeding of dairy cattle.

Entries in the five dairy breed classes have been received from Montana, Indiana, Michigan, Missouri, Texas, Kansas, Ohio, Illinois, Iowa, Minnesota, New Jersey and Colorado. Many other states will be represented when the final entry date arrives.

Judges are: Jerseys, Prof. J. A. McLean of the University of British Columbia.

Ayrshires: L. S. Gillette, Fostoria, Iowa.

Brown Swiss: Howard C. Barker, secretary of the Ohio Holstein-Friesian Association.

Guernseys: Prof. J. B. Fitch of the Kansas state agricultural college.

Holsteins: C. H. Davis of Yakima, Washington.

LEGISLATIVE COMMITTEE

The agricultural legislative committee of California met recently in Sacramento and determined as to a number of measures or provisions in the legislation to be recommended. The committee definitely and emphatically condemned the single tax measure and the anti-vivisection movement. The alien land law report was deferred until a meeting to be held in October. A committee to investigate as to budgets of the college of agriculture, state department of agriculture, state board of agriculture, state board of forestry, superintendent of weights and measures and market director, was appointed. This committee consists of George W. Pierce, Fred Bixby, Aaron Sapiro, L. B. Scott and J. L. Nagle.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Embargo on Gasoline

Could the United States put an embargo on the exportation of gasoline and distillate to protect the farmer, tractor, truck and automobile user?—Subscriber, Pasadena.

The constitution of the United States provides that congress shall have power to regulate commerce with foreign nations and among the several states and with the Indian tribes. Under this clause it was determined by the United States supreme court very early in the history of the nation that every subject falling within the legitimate sphere of commercial regulation may be partially or wholly excluded from foreign commerce when such may be demanded by the safety or by the important interests of the entire nation. It is within the legislative discretion as to what it may operate upon.

Cattle Mortgaged

Children by a former marriage give their mother certain cattle. Her second husband mortgages these cattle without her consent or signature. Is the mortgage valid?—Subscriber, Jamestown.

The cattle are clearly her own separate property and the mortgage placed thereon is invalid unless she by some means estops herself from claiming its invalidity. Such means in the case of the bona fide mortgagee would consist in permitting the mortgage to remain without taking any action to remove. She should promptly notify the mortgagee of the true ownership of the property and that she does not consent to the mortgage, so as to allow him opportunity to regain his money.

Damage from Eucalyptus

What is the rule regarding eucalyptus trees along adjoining property? There is a line of trees adjacent to my walnut grove, which unquestionably acts to the detriment of my property. What, if any, is my remedy?—Subscriber, Los Angeles.

It has been held in several cases that such trees constitute a nuisance for which two remedies are available. Either cut off the roots by digging a trench along the line of your property or bring action to enjoin the owner of the eucalyptus trees from permitting the roots to extend into your lands.

CALIFORNIA AS A BOXED APPLE STATE

By F. W. Read, California Standardization Service

Few people realize the importance of California as a boxed apple state. Of the total number of cars shipped in 1919 California ranked second, Washington being the only state in the Union to exceed it. According to the federal bureau of markets, California was followed in the number of cars shipped in 1919 by Oregon, Idaho and Colorado in the order named. From Washington 19,760 cars of apples were shipped in 1919, and of this number 2,257 were taken by New York City and 1,366 by Chicago.

The bureau of markets, over a period of years, has been compiling the number of carloads of the principal fruits and vegetables unloaded at the large market centers of the country. This information is very valuable as indicative of the consuming capacity of the larger terminal markets. The figures show that California shipped 4,147 cars in 1919 and of that number 539 cars were unloaded at New York City, or about 76 per cent of the California apples unloaded at the ten principal market centers of the United States. It would seem, therefore, that New York is by far the most important outlet for California stock. Chicago received 66 cars of California apples in the same year, Cincinnati 31, St. Louis 24, Philadelphia 21, Pittsburgh 16, and Kansas City 12.

California is a more important apple state so far as volume is concerned than is Oregon, Idaho or Colorado. This fact emphasizes the importance of proper standardization work. If our stock is going to meet the sharp competition from other states it is essential that apples moving out of California be graded strictly according to the California standardization law and that every car maintain the reputation of this state for quality, grade and pack.

CALIFORNIA PEARS O. K.

Because there is lime in various spraying solutions, especially those carrying arsenate and sprayed on pears in the codling moth campaign control, some inspectors of the federal department of agriculture have felt that the discussion aroused called for condemning some pears which were entirely harmless. Director Hecke made a trip East to get a line on marketing conditions, the requirements of the U. S. department and the Eastern trade. The state department is now cooperating officially with several branches of the federal department and even closer cooperation will result from conferences which have been held.

Among other matters which came up for consideration at a joint conference between the secretary of agriculture, the chiefs of the various bureaus and the director of agriculture of California was the question of pest control as carried on in this state. It developed that some objection had been raised in one or two receiving markets in connection with the spotted appearance of the fruit as the result of spraying for the control of codling moth. This spotted appearance is largely due to the use of a lime spreader on the fruit. In order to maintain the confidence of the Eastern markets it was agreed as essential that all fruit present as clean an appearance as possible upon reaching the consuming market.

FROGS

One of the perplexing features of prune drying which every prune grower has to confront is the fact that a small percentage of his dried prunes prove to be "frogs." A writer in the San Jose Mercury, A. W. Hudson, discusses method of lowering this percentage as follows:

Each prune drying season brings up again the same old question of "frogs" (or "bloaters" or "chocolates"), and also the time honored admonition from the wiseacres to "keep the water boiling and have the dip very hot." I have seen acres of these hot dipped prunes, and every prune a "chocolate." This condition is simply the effect of too high a temperature in the dip, which coagulates the juice just under the skin of immature prunes, encasing the fruit in a film of dark brown jelly, thus hermetically sealing it and effectually preventing evaporation of the interior juices, which soon ferment, and the result is "frogs" or "bloaters."

For proof of the above, break the skin of any "chocolate" prune which has not had time to ferment, and you will plainly see the brown film just underneath. Cut a little deeper and you will find the flesh of the prune in a clear, natural condition, but, being sealed by the film, it will soon ferment and the prune is spoiled.

A caustic dip at the scalding temperature of 160 degrees will suffice to remove the bloom and check the skin (the entire benefit of any dip) and will not injure the prunes. Even green prunes thus dipped will dry and not bloat. With a thermometer it is not difficult to regulate the temperature, not nearly so difficult as to regulate the people with whom old errors persist. The pity of it is that hundreds of tons of prunes are spoiled and thousands of dollars unnecessarily lost through persistent ignoring of these simple, easily proven facts.

Hercules Engines

Delayed Fair Notes

TUNNEL was burned out and caved in. Malls came through sometimes two days late. This accounts for a great mass of matter regarding state fair not reaching us in time for last week's paper. Its value as news has passed but there are a number of interesting points made by writers of the Cultivator staff, so we make the best of this delay by giving readers a later look-in at the state's greatest fair. We start with comment on the dairy classes:

DAIRY CLASSES

The Holstein Show, by C. L. Hughes

As a whole the showing of Holsteins may well be rated as one of the best yet seen at Sacramento. A number of the classes hardly showed the strength of the last few years, but the large number of exhibitors, especially owners of small herds, furnished a feature that indicates plainly the widespread interest in the breed. The Holstein judging attracted the largest crowd that has ever surrounded a cattle show ring at this fair, and it was an interested crowd that showed appreciation of the splendid cattle before them.

A feature of the show was the strong representation made by Stanislaus County breeders who had a total of something like 55 head in the various classes, winning a liberal number of top places and contending strongly in other classes.

Reversing the usual custom, the females were shown first, and Judge John L. Smith was called upon to open the show with the class of mature cows. Holmes won first and second handily with Ida Lotta, Winifred Burke and Mona Fobes, there being little to choose between two good ones. Allana Farm's Johanna Homestead Belle was a strong third, with Beeman's entry in fourth place and Davis' entry fifth.

In the three year old class Cornwell showed two excellent heifers that won first and second handily. The first prize winner, Ciruela Walker, showed consistent development since last year when she was first as a two year old. Third place was taken by Bonita Pontiac, the Santa Anita Rancho entry, which did not ship well to the fair and was not showing in her best form.

The two year old class uncovered the strongest class up to this time, and in the first prize winner, the Allana Farm heifer, Josephine Johanna Oak De Kol, furnished the senior and grand champion. This heifer was junior champion at San Francisco last fall and is one of the most pleasing types. She is not a large animal, neither is she deficient in size, and the fact that she has been milking since last January is a point greatly in her favor. Beeman's Bernice Na Dean De Kol was a strong second, with the Santa Anita entry in third place, Holmes' entry in fourth place, and Jane Garden Farm in fifth place with a wonderful heifer that was showing to the greatest disadvantage because near calving.

In the senior yearling class Jane Garden Farm produced an outstanding winner in Jane Garden Dirkje Korndyke, with Beeman's entry in second place, Santa Anita in third and fifth positions, and the Holmes entry in fourth place.

In the junior yearling class Santa Anita Rancho made a clean sweep of the first four places with a group of heifers that would do credit to any show, with Azevedo Bros. in fifth place.

The senior heifer calf class brought a wonderful lot of youngsters, and yet with 27 entries the judge was able to find quickly an outstanding winner in Addie Creamcup Pontiac Burke, owned and exhibited by Clay Stammerjohan of Turlock. This 12 year old boy selected and bought this heifer himself, fitted her, has now shown her four times without defeat, and when he carried her up to the junior championship in this show he received one of the most popular decisions of the entire show and a full measure of applause from the large crowd which had watched him show his heifer like a veteran. Allana Farm was in second place with Higdon in third and

fourth positions with two good daughters of King Korndyke Pontiac 20th, and the Santa Anita entry fifth.

The junior heifer calf class brought out another very strong group in large numbers and top honors fell to the Allana Farm entry, Miss Johanna Ormsby Hengerveld, with Higdon's entries in second, third and fifth places, and the entry of Katie Stammerjohan in fourth place. This girl, sister to the youngster who showed the junior champion, can also be congratulated for winning so high a position in a very large class and showing against veterans in the show ring.

The aged bull class brought out Merci Lad Korndyke Burke, the Santa Anita bull that is widely regarded as one of the best types California has yet produced. Startling with first place in this class, he went up to the grand championship without serious difficulty. Second place went to Cornwell's Sir Johanna De Kol Rag Apple, a bull that has made substantial improvement during the past two years. Holmes was a strong third with Segis Pontiac Abbeckerk, with Scudder's entry in fourth place and Benoit's entry fifth.

The two year old class was headed by Beeman's Dean Fayne Segis, a bull of remarkable size for age and one that promises to develop into an individual of rare excellence. Six Brothers Dairy took second position, with Barry's entry in third place and last year's junior champion in fourth place.

The senior yearling class uncovered the junior champion in Prince Bonnie Walker, exhibited by Higdon. This youngster was no mean contender for grand championship honors. Benoit's entry was second and Holmes' entry third.

In the junior yearling class the Santa Anita entry, the \$41,000 King Korndyke Pontiac Acme, was an easy winner, although the judge had his little joke in this class and had the ring-side talent guessing for a minute or so. York landed a good youngster in second place, with the Scudder and Barry entries finishing in the order named.

The senior bull calves brought a large class of youngsters before the judge, and the Azevedo entry, King Tora Pontiac Prilly, won first place handily over Dean Tule Segis, the Beeman entry. Allana Farm furnished a strong third in Admiral Pietertje Mechthilde, with Santa Anita in fourth place and Allana Farm fifth.

The junior bull calf class was distinguished by numbers and a wide spread in quality between the top and bottom. There were a number of calves in this class that had no place in a show ring, although the money places and down beyond it for several places had a splendid lot of calves. Anderson & Fogarty took first in this class on a well put up calf of real show quality, with Holmes in second place, Azevedo third, Higdon fourth and Davis fifth.

As remarked before, one of the most pleasing features of the show was the large number of exhibitors, and the awards show that the prize winners were quite well distributed through the various herds. A feature of the show was the string of young things exhibited by W. J. Higdon, most of which were the get of the \$12,000 bull, King Korndyke Pontiac 20th. The get of this bull won first in calf herd and first in get of sire, and the second prize breeder's young herd were mostly of his get. This group was a center of attraction all during fair week.

The Guernsey Show, by R. P. Royce

Five herds, including three of the largest owned in California, made up the best showing of this breed in California. The Brant Rancho of Owensmouth was out in full strength with a herd considerably strengthened since last year. The aged bulls could not take the measure of the veteran ten year old, May King of Fern Ridge. This bull is a remarkable example of constitutional vigor. He was champion last year and seems to have improved, at least he won his class and paraded through to the purple. Lollow Hill Farm, Colton, copped off the junior champion with a topy calf that looks to be a good prospect for future honors. The aged cows again bowed

to last year's champion, Princess of Meadowbrook, that carries her 12 years as lightly as many five year olds. Her desirable type and extreme quality carried her by all competition. The junior champion was found in the Junior yearling, Rosie E. King of Hollow Hill Farm. A. B. Humphrey had out a full herd, and while his cattle did not come in for any firsts they furnished plenty of competition for the winners. W. E. Tomson of the University of California made the awards.

The Jerseys

The feature of the Jersey division was the remarkable winning of the Fortini herd. With only seven head he won nine firsts, both grand championships and the senior champion bull. There is a real story back of the Fortini exploit that can't be told at this time. Suffice it to say that this breeder, comparatively a new figure in Jersey circles, having made his first show last year, fairly set the old timers by their ears. It is doubtful if a better fitted lot of Jerseys has been seen at Sacramento in years, and it was largely the superior fitting that won for him.

The aged bull, Dairy Maid's Gay Prince, led all the rest on his type, quality and condition. He is a masculine headed fellow with width and depth, a strong top and a hide that is a delight to handle. Thorp won the senior yearling class and his Biddy's King of Mossdale was later made junior champion. Traynham won the junior yearling class and Fortini took the next two classes.

Fortini's aged cow, Croyden's Estelle Fox, was sent to the top of her class over a strong field. C. E. Barrows was in the lead with his three year old. Fortini had the two year old class, the senior yearling and the senior heifer calf. Barrows had the junior yearling and Miller won the junior heifer class. The judge picked the lovely little calf, Isolda of Tintagel, for junior and grand champion over the aged cow. Miller won the two young herds and the get of sire. He likewise was in front with his five cows.

W. E. Tomson of the university rated the Jersey classes.

The Milking Shorthorns

Five California breeders staged a show of milking Shorthorns that in many respects can be rated as one of the best ever held in the West. Over 60 animals made up the show. A striking feature of the exhibit was the marked dairy type all through the classes. No longer are breeders bringing out individuals that would find favor in some beef shows. One of the most attractive classes of the show, and a really remarkable class it was, was the aged cows. This class was led by the beautiful red Bellevue Daisy, sweetly feminine in front, keen in the neck, fine at the withers, with a straight top and capacious middle. She swung a large udder of fair conformation and excellent quality that was supported by an ample vein system. Her type and quality carried her through to final honors. The junior champion female came from the same herd and was the junior yearling, Gypsy Girl.

Top bull honors went to the same herd on the aged bull, Westward Ho, a bull that shows marked dairy conformation. The junior champion bull was furnished by Thos. Harrison of Santa Rosa in Count Tickford. Alexander and Kellogg and Thomas Harrison divided all the first placings.

John L. Smith of Washington made the awards.

The Ayrshires

E. B. McFarland of Steybrae Farm, San Mateo, was the only exhibitor of Ayrshires and therefore was awarded all places. Next year it is hoped that other Ayrshire breeders will be on hand. This state owns some very excellent herds and splendid promotion work could be accomplished with concerted action.

BEEF CLASSES

The beef classes outshone any former state fair exhibit.

The Shorthorns

The 1920 show was generally conceded to be the strongest ever made at Sacramento. The showing was confined exclusively to California herds

and the nine exhibitors had bred most of the entries. Nearly all of the classes were well filled, but the younger things were out in greater numbers.

The five two year old bulls were led by the red, Imp. Scottish Lord, shown by Glide. He is a bull of scale, with even lines, not overly impressive about the head and hardly as nice to the touch as one would like. The Pacheco entry, Dalmeny Count, a roan, lacked the scale of the winner, but his general setup would have carried him through had he been better balanced from his hooks back. The Blackhawk entry was easily the typeiest bull in his class but was handicapped on age, he being practically a senior yearling. This youngster is a real show bull. He is especially attractive in front, carries himself with style and is one of the smoothest calves that one could wish. Had he carried a bit more finish he would have been the undisputed choice for champion—and there were many who felt that he could have carried the blue with ease and grace. Bond showed a thick, smooth son of Sir Type that had friends for a higher rating.

The senior yearlings were limited to two, Glide's Cheerful Count pleasing the judge over the Dibblee entry. The junior yearlings were topped by the thick roan Ormondale calf. Glide was second with the white, Spicy Count, over Amanda's Dale, shown by Pacheco. Ormondale landed next with a full brother to Little Sweetheart, and Carruthers was fifth.

The senior calves made a particularly good showing. Pacheco was out in front with a beautiful white youngster that had size, smoothness, thickness, quality and balance, coupled with a good front. He was later made junior champion. Glide was second with a roan calf of a bit different type over two cracking good calves shown by Dibblee. George Dierssen, making his first show, was lucky to get his calf placed above the attractive roan, Count Glory Jr. Barring a slight raise at the tail, the sixth calf had little to object to and could very handily have stood several notches higher.

Bond led off the juniors with roan calf of most pleasing type, a deep, thick, soggy youngster put up on correct lines. Dibblee was second over two Murphy calves that lacked the condition of the leaders. The fifth place fell to a late calf that looked small with the others.

Throughout the judging of the bull classes the judge, Professor C. M. McCampbell of Kansas, turned toward those individuals with scale, and on several occasions the ringside felt that he sacrificed type in order to get size. The same idea was carried through the female classes.

The aged cows, shown with calves, yielded undisputed leadership to the wonderful Little Sweetheart. Back again after her sensational career of last season, she appears equal to duplicating her former triumphs. She has matured a bit more and the fact that she is now a matron has in no way left an impression. The judge declared that in his opinion she was 50 per cent better than when at her best last year, and added that she could hold her own in any show. Second rating fell handily to Pacheco Lass 80th because of her scale and thickness over Mayfield Victoria.

The two year old class was one of the strongest of the show. Bond was forward with Ormondale Mald 2nd, a red. She is beautifully fronted, very smooth and even in her lines, with plenty of spread in the crops and carrying her balance throughout. Glide furnished the second rating with Village Lassie, a roan whose scale and thickness appealed to the judge. Blackhawk Roan Lady, of short age, was given third over the extremely thick and deep King's Countess. The last named had friends for second. A full sister to the grand champion and very much like her in front, was fifth.

The six senior yearlings were led by the smooth, well covered roan, Village Rose, shown by Glide. The beautiful white, Pacheco, a winner in her class last year and of rare type, was faulted by the judge on her handling. Glide was third with a red and white over an attractive heifer shown by Carruthers that was hardly as far along as she should have been. The fifth place was allotted to a Pacheco

Lendorris Liberty Bond, Skyrocket and Lendorris Liberator

Three good sons of three good sires are our herd boars. We will have a few representatives of our herd on exhibit at the state fair. When in need of choice Poland China breeding stock, write for our prices. You will find them very reasonable.

TOYON FARM ASSOCIATION

WILL SELL AT PUBLIC AUCTION

150 Registered Holsteins 150

November 10-11, 1920

State Fair Grounds, Sacramento, Cal.

The herds of Toyon Farm Association, Los Altos and San Francisco, are to be consolidated into one big herd on their Brentwood Farm. The herds now total approximately 350 head, and for the present the owners plan to carry only about 200 head, hence the sale of 150 head at this time.

100 Milk Cows in This Sale

Their first individual offering will include approximately 100 head of cows and heifers in milk, of splendid type and breeding, many with large official records and out of high record dams. There will also be about 30 bred and open heifers, and about 20 bulls in the sale.

Females Bred to High Record Bulls

The females in this sale are bred to SIR PIETERTJE ORMSBY MERCEDES 43RD, son of Sir Pietertje Ormsby Mercedes and Aaggie Wayne Peep, whose yearly records for five years exceed the total of any other cow; SIR AAGGIE MEAD, son of Sir Aaggie De Kol Acme out of a 1200 lbs. daughter of the 1142 lb. cow Aralia De Kol; a son of the 33 lb. cow Bonnie Lass Pauline; and a 30 lb. son of Johanna Bonheur Champion.

A Healthy Lot of Unblemished Cattle

In this entire offering there are only three cows with blemished udders; no female of breeding age will be offered unless she is believed to be safe in calf; every animal is positively guaranteed to be a breeder; EVERY ANIMAL IS TUBERCULIN TESTED BY A FEDERAL VETERINARIAN AND SOLD SUBJECT TO RETEST BY THE BUYER.

entry that was not as even or level on top as the others.

The junior yearlings did not make as strong a show as was offered in other classes.

The seven senior heifers rather upset pre-show "dope" in the manner in which they were finally rated. Sultan's Dale, a white, was of sufficient caliber to step out in front because of her scale, thickness, evenness and balance, and lovely character. These same qualities carried her through to junior championship. Village Ruhy, another white, was second for Dihlee over a thick roan from the Glide herd, and a stall mate was left in fourth. Blackhawk was fifth with a white calf that appeared a trifle upstanding. Carruthers was sixth with a highly attractive, well balanced little lady that was a regular hock. She undoubtedly could have stood higher had the judge fancied the type she represented.

The ten juniors made up the largest class of the show and were headed by another Glide entry.

The group classes were better filled than at any former fair and competition ruled fairly keen all the way through. The aged herd naturally fell to Glide, and Pacheco won the top honors in the younger herds. Blackhawk Ranch won the coveted get of sire class with the get of Roan Radium. It is of interest to know that the entire Blackhawk show herd represented the get of that hull.

The Herefords

The Hereford men were jubilant. They came forward with three times as many entries as were shown last year and for the first time in the history of the fair they were out with a larger number than their Shorthorn friends. And they had a right to be proud over the showing they made. There have been many larger shows that could not boast of the quality that the seven California and two Nevada breeders had out. It was the best Hereford show yet held at Sacramento and the breeders declare that it only indicates what they expect to do next year. Throughout the placing the judge, C. M. McCampbell, insisted on scale combined with quality.

The six aged hulls conceded first place to the massive Beau Rosemont, shown by Rule. This bull combines scale, thickness, smoothness and character to a degree that cannot fail to please. He was quite outstanding. The Morgan hull from Nevada was a smooth fellow, hardly so thick as the third hull, but stood a bit squarer and walked better and was leveler on top, and was not so much on the pony type. However, the third place was easily filled over the two polled bulls from the Emmons string.

The two year old class provided the opportunity for the Cazier entry, Beau Blanchard 76th, to make his debut before Western breeders, and the universal verdict indicated that all were agreed with the judge when he sent him to the front. He is a typical son of his noted sire. Impressively fronted, with a head full of character and an attractive horn, level on top and carrying his width to the rear and down into his quarters in a manner to cause wide comment. Indeed, few better quartered bulls can be found. When he fills a trifle more at the heart he will correct about the only apparent point open to mild criticism. Jacks was second with a son of Woodford, well fitted, thicker and with more bone than the polled fellow in third. A son of Woodford 1st, shown by Barngrover, was placed fourth on his scale over the other Jacks entry.

Only two senior yearlings came forward in class, and the larger, heavier boned and thicker quartered Barngrover entry was handed the blue.

The four junior yearlings were topped with Jacks' entry, that had more scale than the Nevada calf. Gahle was at home in third place over the Ogden entry with a plainer head and lacking scale.

The six senior calves furnished plenty of competition, but the good front, covering, stronger bone and greater stretch won for the Gahle calf over the lower set Barngrover entry that was smoother at the tail. The third calf had the factor of size, a stronger top and straighter legs. The last two calves lacked the size of those above them.

The baby class was strong and it was with the winner that the judge

found his junior champion in the corking good son of the two year old winner. This youngster is hard to get away from. He has about everything a good calf should have, save a bit more condition. Few nicer lined, smoother or better balanced calves have been seen out this way.

An interesting situation developed when the championships were tied. Sire and son came together for the purple, with the sire so outstanding that the decision was inevitable.

Generally speaking, the female classes were better balanced than the bull division, and the classes were better filled. A most unusual sight at Sacramento was the line up of nine aged cows. Miss Dale, twice a winner at Los Angeles, topped the lot by virtue of her size, balance and thickness. Cazier was second with Mischievous A, a more compact sort whose smooth covering placed her above Rose Donald. The fourth allotment went to the Gahle herd over the Jacks entry because of a lack of smoothness in the last.

Seven two year olds admitted no other top than Bocaldo Beauty, representing Jacks. She is remarkably thick, with exceptional spread of ribs, extreme depth, very mellow to the touch and with sweet character to burn. She never stopped going until she was declared the grand champion. A stall mate, Gay Princess, hardly so large or deep, but herself thick, fitted properly into second. Two half sisters contested for third with the Gahle entry, landing through her width and handling. The fifth, a poll, was a trifle too high in the air to please.

The Briggs herd, making their first show, furnished the top senior yearling in Miss Era 14th, whose depth, covering, quarters and heart offset a top none too level. A Nevada entry of slightly different pattern was second. The third place fell to a Barngrover entry over one from the Gahle herd because of her better top, although she had hardly as pleasing front. A smooth headed one from the Emmons lot was a trifle plain and not so thick.

It was generally thought that the junior yearlings staged the best show of the day. Nine cracking good ones, with slight margin between top and bottom, gave the judge some work. The lovely little Ruth Domino, that was grand champion as a calf at Denver, led out in front and was later made junior champion. She is very thick and deep with width to balance, and she has two good ends. She had friends for final honors. Rule was second with a little lady that kept things interesting for awhile for the winner and never left matters in doubt as to the red rating. Her balance, stronger top and neater head placed her next to the top. Jacks was third over a Snyder entry that had the size but lacked the even balance of the one above her. Cazier was fifth with a very nice young thing that was a trifle small.

With equal numbers and almost as good quality all down the line, the senior calves were not far behind the yearlings. Cazier took both top places, Carnation 4th going above Nevada 5th on account of her size. Both calves are the right sorts and are thick and smooth. The third and fourth calves hold promise of development. The fifth calf was a poll that lacked the class and fitting of those above her.

Seven juniors made up a good class with Jacks winning with the lovely little Dainty Dare. Briggs was second with a thicker and wider and nicer headed calf than the one shown by Cazier, although the latter was smoother at the tail.

The battle for the grand championship was between the two Jacks entries. Each had friends, but the thickness and nice handling of the senior champion was sufficient to place her above the one with the better head and heavier quarters.

The group classes were a distinct improvement over former shows, with honors fairly equally divided.

Aberdeen Angus

James Marwick of Santa Barbara was the only exhibitor of the Angus cattle and was represented by four head that he recently imported from Scotland.

Fat Cattle

The Kern County Land and Live stock Company had the only entry in

the car lot classes, showing a top lot of well finished Hereford steers.

Blackhawk Ranch, Diablo, showed the winning steer in class for one year old and under two. Kern County Land and Livestock Company was second and fourth and J. A. Bunting of Mission San Jose was third. In the under a year class G. W. Emmons of Danville was the only exhibitor. The Blackhawk entry was later made champion.

SWINE

J. Bennett made comment last week in effect that "Improvement in the showing made by all breeds was very noticeable in all swine classes."

The Poland Chinas

The show this year was distinctly one of real big types and in quality would compare very favorably with any show in the country. In point of numbers the Polands were first with 276 head on the grounds.

In the aged boar class, Big Timm owned by Fred Ross, Hanford, was easily first and the choice of many of the breeders present for grand champion. King George Big Bone, owned by Johnnie Glusing, Winton, a very typy senior yearling, was the choice of the judge for that coveted place. The reserve senior champion was the good junior yearling boar, Headlight, shown by Marshall & Son, Sebastopol. The reserve grand champion, Navy Boy, shown by Gatewood & Stevens, Fresno, was junior and reserve grand champion and one of the greatest individuals in the show.

Among the aged sows and junior yearlings, Alex. D. McCarty was the heaviest winner, taking first in both classes and senior and grand champion on Liberty Girl 3rd. J. F. Lehman, Lodi, won the first in the senior yearling class and reserve grand champion on Evergreen Hutch.

Bassett Bros., Hanford, the heaviest winners in the show, had the junior champion on a very typy spring gilt, with Hugh C. Shinn, Tulare, the junior reserve on his senior gilt.

Taken as a whole, the show was such a great improvement over last year that the breeders feel very much encouraged over the prospects for the future of the breed.

The Poland China Futurity

The futurity shows at the various state fairs have done more to stimulate interest among breeders and cause them to exhibit than any other one feature. The California futurity classes were well filled with the exception of the junior yearling. As in the open classes, the showing was on a much higher plane than ever before. Bassett Bros. were the heaviest winners, with Alex. McCarty second and A. J. Elliott third.

The outstanding class of pigs shown should result in a showing next year that will be the equal of any futurity show in the country.

The Durocs

The Duroc-Jersey show was a close second in point of numbers, with 230 head on the grounds, and by far the greatest lot of hogs ever exhibited. Great credit for the success of the show is due Field Secretary L. J. Anderson and the directors of the state association.

In the aged boar class the Brant Rancho, Owensmouth, took first on May Rose King. Falfadale Farm, Peris, took first and reserve senior and reserve grand champion on the senior yearling, Great Orion Sensation.

V. F. Dolcini, Davis, took first in the junior yearling class with Choice Wonder 3rd, an extremely smooth and mellow boar that was later selected for senior and grand champion. Diamond Bar Ranch, Spadra, took first in the senior pig class on an extremely typy youngster by Ireland's Orion Reformer.

W. T. Hollingshead, Orland, took first in the junior pig class on High Sensation, and later was awarded junior championship on the same pig.

Among the sow classes Diamond Bar Ranch took most of the ribbons on one of the greatest lots of big sows ever shown. Queen of Pathfinders added another purple ribbon to her long string of grand championships. Orion Sensation Lady was reserve grand champion.

Tu-Tock-A-Nu-La Ranch won first in the senior sow pig class on Tu-Tock's

MAMMOTH DISPERSAL SALE

Rosamaines Rancho

Owned by A. J. & F. W. Stalder

Riverside, California

October 19 - 20 - 21, 1920

Part of Barns at Rosamaines Rancho. (Inset) The Bottomland Pasture.

Owing to the ill health of the managing owner, Mr. A. J. Stalder, Rosamaines Rancho, one of the foremost livestock breeding plants in the west, will be sold at public auction to the highest bidder, and its splendid herds of livestock dispersed.

Tuesday, October 19

At 9 A. M., sharp, the dispersal will open with the sale of that portion of the Rancho on which the buildings are located.

THIS PARCEL consists of 235 acres of the most productive land in California; 100 acres are bottomland pasture that carries regularly from 100 to 150 head of cattle, abundant shade and water, and green feed the year round. This land will raise practically any crop grown in California; 60 acres of the balance are in a fine stand of alfalfa, and 40 acres in corn for the four silos.

Improvements on this parcel cost over \$200.00 per acre at normal costs, not a dollar spent for show, and by all who know the property it is regarded as one of the most practical and efficiently laid out in the state.

Two motor equipped pumping plants furnish an abundance of water from never failing wells.

All buildings are electric lighted and sewerred, and buildings are all in good condition, most of the barns practically new.

TERMS ON THIS PARCEL: One-third cash, balance in six equal annual payments, interest at 7 per cent, 2 per cent discount for cash on deferred payments.

PARCEL NO. 2 contains 397½ acres and adjoins the balance of the Rancho on the north. This is cropped regularly and is first class vineyard, orchard, or alfalfa land with an abundance of cheap water.

TERMS ON THIS PARCEL: One-half cash, balance in four equal annual payments, interest at 7 per cent, 2 per cent discount for cash on deferred payments.

ROSAMAINES RANCHO is 45 miles east of Los Angeles, 12 miles west of Riverside, 3½ miles south of Wineville.

OIL PROSPECTS—All of the land adjoining on the north and west has already been leased for oil, and wells are actually drilling within two miles. Leases on either cash or royalty basis have been offered for this Rancho but owners decided to sell unincumbered.

On the Same Day Following the Sale of the Rancho

We will begin the dispersal of the livestock and equipment, selling on this day

90 BIG RED GRADE SHORTHORN COWS
50 REGISTERED DUROC-JERSEY HOGS

18 REGISTERED PERCHERON MARES AND STALLIONS
A SMALL HERD OF GRADE DAIRY HEIFERS
1800 WHITE LEGHORN HENS AND PULLETS
THE IMPLEMENTS AND EQUIPMENT

consisting in part of one almost new 12 foot McCormick Combined Harvester; one Typhoon Ensilage Cutter; one 20 h.p. motor; one Osborne Binder; Beet Drill; plows, discs, rollers, rakes, mowing machines, harness, double trees, lead bars, chains; a complete Acetylene lighting plant; and a large number of other items.

**Wednesday and Thursday
October 20-21**

We will disperse the splendid herd of registered Holsteins,

150 Registered Holstein Cows, Heifers and Bulls

KING PONTIAC NETHERLAND SEGIS 3D, the senior herd sire, has 27 A.R.O. daughters with records up to 29.91 lbs. butter in 7 days for a senior 3 year old. He has about 60 living daughters and about 30 females in this sale are bred to him. He is by a proven son of King of the Pontiacs and out of the twice 34 lb. cow, Gerben Abbekerk Maid.

SIR ORMSBY SKYLARK RAUWERD, the junior herd sire, is by Sir Ormsby Skylark, sire of the world's record cow, Duchess Skylark Ormsby, and is out of a 34 lb. dam sired by a half brother to King Segis. He is a show bull, and although only 20 months old at time of sale there will be at least 50 females in calf to him.

Only Nine Animals Over 6 Years Old

In this entire herd there are only nine animals 6 years old, or over, and there are only twelve over 4 years old. It is a beautiful herd, and the production records are exceptionally good. There are 50 females in the sale with official records up to over 34 lbs. butter in 7 days, and a considerable number are now on yearly test and making excellent records.

105 Descendants of Gerben Abbekerk Maid

Gerben Abbekerk Maid, the famous twice 34 lb. cow, will be in this sale, along with seven of her half sisters by the same sire, and besides that there are 105 of her sons, daughters, grandsons, granddaughters, great-grandsons and great-granddaughters in the sale. The famous cow herself is only nine years old, has nine living sons and daughters, and sells safe in calf again.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RE-TEST EXCEPT AS ANNOUNCED AT SALE.

AT PUBLIC AUCTION

NOVEMBER 4-5-6, 1920

State Fair Grounds

Sacramento, Cal.

Thursday, November 4

45—Registered Herefords—45

In this offering the Pacific Coast Hereford Cattle Breeders Association will endeavor to place before the public the most select lot of breeding Herefords yet offered in a western sale ring.

Top animals from some of the most noted western herds will be chosen for this sale and buyers will find a wealth of quality from which to select. Detailed announcements will appear later.

Sale under auspices of

PACIFIC COAST HEREFORD CATTLE BREEDERS ASSOCIATION

J. I. Cazier, Pres., Wells, Nev. J. A. Bunting, Sec'y, Mission San Jose, Calif.

Friday, November 5

NEVADA HEREFORD RANCH

will make its first individual public sale offering of

55—Registered Herefords—55

featuring daughters of the great breeding bull Harris Standard 2nd, bred to the \$10,000.00 Grand Champion BEAU BLANCHARD 76TH.

There will be choice cows with calves at foot, and a large number of Standard heifers in calf to BEAU BLANCHARD 76TH. Here is a group of high class cattle that combine a splendid measure of good breeding, good type, and good health, and can conservatively be rated as breeding foundation material of the first rank.

Owners: J. H. CAZIER & SONS, WELLS, NEVADA.

Saturday, November 6

Another offering of well bred Herefords, including cows with calves at foot, and a large percentage of good heifers.

50—Registered Herefords—50

This offering permits the buyer a very desirable selection of young females of good breeding, with calves at foot by good sires, or bred to well bred bulls.

Owners: BARNGROVER & WRIGHT, SANTA CLARA, CALIF.

All of the above cattle are guaranteed breeders and sold tuberculin tested with individual certificates delivered to buyers.

Pointers on Hog Cholera

REALIZING the seriousness of an outbreak of hog cholera which manifests itself in its most virulent form and spreads very rapidly at this time of the year, it is extremely important that all persons interested in the breeding of hogs or pork production should possess the necessary information to enable them to take proper precautions to prevent the spread of this disease. It is prevalent in some localities in this state.

The cholera is caused by a germ so small that it cannot be seen by the use of the most powerful magnifying apparatus in use today. The organism gains entrance through all the natural openings of the body and through wounds or abrasions. Food, if not contaminated by the germ, never produces the disease. Avoid the possibilities of hogs becoming exposed to the germ and they will remain free from the disease.

How Cholera Manifests Itself

There are times when the symptoms presented by a hog affected with hog cholera are not sufficient to enable one to recognize the presence of the disease when it first makes its appearance. Occasionally it takes such a rapid course that it is not suspected until a dead hog is found.

The acute form, which is the most common one of the disease, may be recognized or suspected by the following symptoms: The temperature of the sick hog will range from 104 to 107 degrees Fahrenheit. (Normal temperature is not over 104 degrees Fahrenheit.) It will steal away from its mates and bury itself in the bedding and will be disinclined to move about when disturbed. It will have a very small appetite, or at times will come to the trough and sip or drink a quantity of the liquid part of the food and make a pretense at eating. Sometimes when the body temperature is high the animal will drink large quantities of water.

Respiratory complications are quite common and the animal will cough frequently. When a pneumonic condition presents itself the animal will show difficulty in breathing.

The skin very often shows large red or purplish patches on the abdomen between the thighs, behind the ears and in some instances all over the body. However, the last two described symptoms are not constant.

When the chronic form of hog chol-

era presents itself, the animal will become emaciated, have digestive disturbances, such as alternating diarrhoea, constipation and chronic pulmonary disturbances. It may have a fairly good appetite and in time will apparently recover, but will not usually be thrifty. Such animals often harbor the germs permanently and expel them from time to time in the excretions, thus exposing susceptible hogs to the infection.

Post Mortem Appearance

On making a post mortem examination the skin should first be examined for red or purplish areas or crusty patches resembling dried blisters. These lesions are usually found on the skin over the abdomen between the thighs, under the arm pits, and occasionally all over the body. The discolored areas may be small specks or they may have become confluent. Of the internal organs the lymph glands as a rule are enlarged and reddish or purplish in color.

The inner surface of the bladder frequently shows many small reddish spots, but sometimes it presents a diffused redness.

The kidneys, after removing the thin membrane which covers each of them, show small reddish or dark brown specks, oftentimes giving them the same speckled effect as that of a turkey egg. These specks are not always numerous and are sometimes overlooked.

The inner surface of the large intestine, particularly in the region where the small intestine joins the cecum, may show reddish spots, diffused redness, and sometimes small button shaped ulcers.

As a rule, the inner surface of the stomach presents a large diffused, deep red or reddish brown area. Occasionally the diffusion does not present itself and spots of the above mentioned color on the inner surface of a fresh normal stomach should not be confused with the appearance presented in hog cholera.

Prevention

Preventive measures are the only logical means of combating hog cholera. They may be carried out as follows:

First—Avoid exposure of susceptible hogs to the germ which causes the disease.

Second—Hogs when exposed to hog cholera should at least be injected with anti-hog-cholera serum, which will protect them through the period of exposure.

Third—Produce permanent immunity in the hogs by administering virus at the same time protective serum is injected.

This last procedure is risky business if the products used are not of the highest quality and properly administered.

Accident

When losses are experienced after healthy hogs are injected with serum and virus, the veterinarian who administered the products is sometimes blamed, when either the serum or the virus is responsible for the fatalities. Again, the reverse is sometimes true. The serum and virus may be of the most excellent quality and be handled and administered by a veterinarian unfamiliar with the important steps of procedure. When this is the case disastrous results may be the reward of the best intentions.

When the owner of hogs is obliged to have them immunized he should thoroughly inform himself on all the factors involved in the procedure that may produce unfavorable results before anyone, directly or indirectly concerned, is charged with being responsible for any ill effects that follow the operations.

Recovers from Hog Cholera

It is not advisable to attempt to save hogs noticeably sick with cholera, for the reason that only a few recover and they, as a rule, henceforth remain unthrifty. The healthy hogs in the exposed drove are the ones that should be given care and attention.—S. O'T.

COMPARE

—Then Buy

Play safe. Compare several of the leading makes of cream separators, point for point—before you act. Any dairyman can choose right if he follows this plan. The danger comes in accepting claims which do not "square up" with performance.

If you start in to seriously consider comparisons, here are some of the commanding features that you'll quickly note about the United States—the separator that holds and sustains the world's record for close separation:

- 1—Perfected Disc Bowl a marvel of close skimming, easy cleaning and assembling.
- 2—Crank or power can be attached on either side.
- 3—Fewer revolutions of crank make turning easy.
- 4—The only practical and reliable Bell Speed Indicator.

Be your own judge and jury—you are the one who pays. We'll be glad to send you all of our booklets; write

DISPERSAL SALE

103 Registered Shorthorns 103

74 Females---29 Bulls

WILLOTTA RANCH

Owned by William Pierce

Suisun, California

Thursday, September 30, 1920

At 12 o'clock Noon

For years this well known herd has been a dependable source of supply for good range bulls, and buyers will now have an opportunity to purchase the regular breeding, heavy milking, healthy females that constitute this good herd.

30 Cows with Calves at Foot

These cows have been handled strictly under range conditions, and their condition on sale day, considered in connection with the splendid, well grown, vigorous calves at foot, will tell the story of how well they do on range feed. These females and the other 44 head of females in the sale, afford a most timely opportunity for range men and established breeders to secure Shorthorn females that will prove most profitable investments.

20 Husky Red Bulls

These are the sort that have made WilloTTa Ranch so favorably known among rangemen of California. Strong, rugged fellows, with plenty of scale and bone, right at home on the range, and most of them ready for service this fall.

Every animal guaranteed to be a breeder; every animal over six months old tuberculin tested and individual certificate furnished to buyer.

WILLOTTA RANCH is 2 miles west of Fairfield-Suisun, on Main State Highway between Davis and Benicia.

DELAYED FAIR NOTES

(Continued from Page 411.)

Pathfinder Girl and later was awarded junior champion on the same animal.

Falfadale Farm took first in the junior sow pig class on Miss Defender Sensation, junior reserve champion.

Judge Weaver's decisions as a whole were very satisfactory.

The Duroc Futurity

The same high standard of excellence shown in the open classes was noticeable in the Duroc futurity, although several of the best pigs on the grounds were not eligible for the latter show. However, Judge Weaver had no difficulty in finding plenty of good pigs to take all the prize money offered. Practically every breeder present signified his intention of showing in the futurity classes next year, and judging by the great showing made this year the 1921 show will be by far the greatest show ever held in the West.

The Berkshire Show, by B. S. Bennett

The Berkshire show at the fair this year was conceded, both in quality and number, to be the greatest of any of the previous shows. Several new exhibitors were seen for the first time, including Anchorage Farm, Italian Vineyards, D. J. Bastanchury, Superior California Farm Lands Co. and J. G. Throckmorton, all making very creditable showing. Most of the classes were large and the competition so keen that had the judge placed any one of two or three animals first there would have been little cause for criticism.

The grand champion boar was found in the Humphrey entry, Escalon Big Joe, with Enhancer, shown by Castleview Ranch, and Royal Longfellow, shown by D. J. Bantanchury, pushing him hard for the coveted honors.

In this class ringside opinion was divided, many favoring the Castleview entry, and as these three boars will meet at Los Angeles and Riverside the result will be awaited with much interest.

The senior yearling sow, Grape Wild Rose 6th, was easily first in class and was later made grand champion, although pushed hard by her dam, Grape Wild Rose. The judge in commenting on these two animals said they were two of the most magnificent specimens of the breed he had ever seen.

The senior sow pig class was not only the largest but put up the keenest competition of any of the classes, there being 25 entries, and it was some time before the judge was able to make his decision. The winner was found in Castleview Royal Duchess, exhibited by Italian Vineyards. If this young sow meets with no accident she should be a strong contender on the show circuit next year as a senior yearling.

From a breeder's point of view the most interesting part of the show was the classes for herds, get of sire and produce of dam, these classes being heavier than at any of the previous shows.

In the breed contest for fat barrow, first for single barrow went to Italian Vineyards, while A. B. Humphrey won on pen of three. In the interbreed contest Napa state hospital was awarded grand champion carlot, while Superior California Farm Lands Company won grand champion single barrow. Several judges competent to speak have pronounced this barrow an excellent example of what a barrow should be, and arrangements are being made for a higher finish and showing him at the International, Chicago.

Wilson Rowe of Iowana Farms, Daventport, Iowa, was the judge, and in commenting on the show said: "The Berkshire show here will compare favorably with any I have seen in recent years, and if any of the Eastern breeders are looking for some real competition they can find it in California." California breeders would welcome such competition.

Chester White Swine

The showing of Chester Whites was limited to the following breeders: E. E. Fulton, Fair Oaks; Harry N. Huffman, Chico; E. N. Johnson, Fair Oaks; N. H. Locke Co., Lockeford; J. Rohy Wentz, Fair Oaks. Huffman took both the boar and sow grand champions with Nero of Ancata and Wonder.

Fulton had the junior and reserve junior boar on Pedro and Silver Heart. He likewise had the junior and reserve junior champion sows with Silver Lucy and Violet. Silver Lucy was reserve grand champion sow and Titeum, shown by Johnson, was reserve grand champion boar. Wilson Rowe tied the ribbons.

Hampshire Swine

James Marwick of Santa Barbara was the lone exhibitor of Hampshire swine and was awarded all firsts and championships for which he competed.

Tamworth Swine

Four herds, one from Illinois and owned by T. L. Endsley and Son of Charleston, one owned by the Pleasant Hill Farm, Bethany, Illinois, and the herd representing the Dutch Fork Stock Farm, Eastover, South Carolina, competed with Dr. J. J. Summerfield of Santa Rosa. The Pleasant Hill Farm had both grand champions. Summerfield had the junior and reserve grand champion boar.

HEAVY HORSES AT SACRAMENTO

If there was expressed disappointment over the small showing of draft horses at the state fair, considerable consolation was afforded by the marked quality of the exhibits.

The Percherons

The Percherons had the distinction of having the largest entry list, the following four breeders constituting the show: M. Bassett, Hanford; Palo Alto Percheron Farm, Palo Alto; N. W. Thompson, Patterson, and James Marwick, Santa Barbara. The stud championship fell for the sixth time to Ithos, owned by Bassett. It is truly marvelous how this old fellow stands the gaff from year to year, but the secret of his ability to come back each year and take the measure of younger contenders is accounted for by the fact that he represents the correct pattern. He has the proper conformation throughout and is especially correct in his joints and underpinning. The legs of this veteran seem to defy the ravages of time and are proof positive that only legs and joints and feet of the proper set and quality can be expected to stand up. Perhaps he doesn't move with quite the truiness of a few years back, but he still gets away with a dash and manner that need not be criticized. It is when

For the Prevention of

ANTHRAX

Of all livestock diseases, anthrax is one of the most fatal.

For the preventive and curative treatment of anthrax we offer

ANTHRAXOIDS

(Spore Vaccine)

For immunizing cattle, horses, sheep and mules.

Anthraxoids are Anthrax Spore Vaccine in pill form. Each Anthraxoid is a dose ready to be injected under the skin of the animal.

Antianthrax Serum

A serum to be used when animals show symptoms of anthrax.

Anthraxoids-Antianthrax Serum

(Simultaneous Treatment)

Double vaccination with serum and vaccine. Used when anthrax is established or suspected to be in a herd.

Write for free booklet on the Prevention of Anthrax.

Parke, Davis & Co.

DETROIT, MICH.

standing, though, that he makes his most impressive show.

The mare championship went to the lovely yearling, Palo Alto Marigold, a black of quality and pleasing conformation, barring, perhaps, a little fineness throughout.

The judge, C. M. McCampbell of Kansas, seemed to go for quality and in the get of sire class awarded the blue to a group shown by Palo Alto over a more rugged, drafty lot entered by Thompson.

The Shires

As usual, the Blackhawk Ranch, Diablo, was on hand with a group of Shires that would be a credit to any show in America. Indeed, it is doubtful if there is a better mare than the aged Blackhawk Chessie. She is back again this year, quite as unbeatable as before. Chessie is a mare of tremendous scale combined with all the sweetness one could ask. Standing or in motion all look alike to her. When she poses herself there is wide room between her and any competition, and

when she moves at the end of the halter she carries her weight with such ease and grace and flash as to even widen the margin between her and any would-be competitor. She is the greatest mare of any of the draft breeds owned in the West and is one of the very best Shire mares now living.

The aged stallion class was won by Merritt and Bowers of Tulare with the black, General Sherman—rather long in the middle and coupling and lacking the class that has been seen at former fairs. The championship finally went to him over the younger entry from the Blackhawk establishment that was the popular choice—coming nearer to the standard that we have come to look for in the modern Shire.

The Belgians

The Merritt-Bowers Company were the only exhibitors of Belgians. Their big, drafty Stevenot was returned champion. Stevenot is a splendid representative of the modern Belgian horse of draft. He has the weight demanded and he is able to carry it in the approved manner. Mina, from the same stable, was champion mare.

The Clydesdales

O. H. Brandt of Sheelville was the only exhibitor of Clydesdales and received all awards.

STATE FAIR NOTES

A meeting of the California Cattle-men's Association was held at the state fair grounds, September 8. The meeting served to bring together a representative group of members. President Bixby presided and stated that during the past few months the membership campaign had been carried on in a vigorous manner and that now the association represented two-fifths of the cattle producers of the state and that they controlled a like percentage of the cattle. Bixby said that the association had been able to secure a ruling from the railroads of the state in which cattle were classed as perishable products and that the new rule would expedite shipment. A meeting will be held at the Los Angeles show, October 7, and the annual meeting will be held at San Francisco in December.

The students' judging contest was held Saturday, the opening day. About 50 students from the college of agriculture and the university farm school participated. Classes of beef cattle, dairy cattle, sheep, swine and horses were judged and reasons given. C. D. Cederstrom of Los Angeles was the champion judge of all classes and was awarded the California Cultivator trophy. The winners in the different classes were:

Beef cattle; Frank Clelland, B. S. Rolph, M. L. Stoner. Dairy cattle; J. A. Murdy, W. M. Stevenson, J. L. Kanst. Sheep; F. D. Baxter, L. S. Brown, N. H. McCollum. Swine; J. L. Kanst, R. K. Gard, J. A. Murdy. Horses; I. M. Noble, Frank Clelland, L. J. Banks.

At the annual meeting of the California Holstein-Friesian Association, held during the week of the state fair, the following officers and directors were elected: F. L. Morris, Woodland, president; R. L. Holmes, Modesto, first vice-president; E. Swift Train, San Francisco, second vice-president; C. L. Hughes, Sacramento, secretary. The directors are: J. E. Peck, Callexico; Earl Sturgis, Santa Anita; R. H. Condee, Chino; H. V. Bridgford, Patterson; A. R. Magruder, Ripon; W. J. Higdon, Tulare; G. W. Gibson, Williams; J. M. Henderson, Sacramento; F. W. Kiesel, Sacramento; Owen Duffy, Napa, and Delancy Lewis, San Francisco.

Following the completion of the judging the Pacific Coast Hereford Breeders' Association held a dinner at which a number of important matters were discussed. The meeting went on record favoring a livestock show at either San Francisco or Oakland. A resolution commending the work of Secretary Chas. Paine was passed and a strong resolution is to be prepared and addressed to the next legislature in an effort to secure increased support for the state fair.

An important step was taken by (Continued on Page 423.)

A Food and Tonic Which Will Show Remarkable Results in

Fattening HOGS

In fattening hogs for market, LACTEIN is the most economical and effective agent you can use. LACTEIN produces that weight of perfect health in the hog—keeps the digestive organs in the "pink" of condition—frees the system from worms and eliminates all disease of the intestines. No danger from bowel trouble or running down by disease. LACTEIN keeps the hog so healthy, that his system gets every ounce of nourishment from the food. The result of this is easily seen—it means that the hog adds on solid, firm flesh, and this means added weight, and in turn means more dollars to you.

Our Service Meets Your Needs

Railsback service on Allwork Kerosene Tractors has just been extended to Northern California and Nevada by our recent entry into this territory as Allwork distributors. This service is an invaluable aid to farmers in realizing to the fullest extent on their tractor investment—a fact supported by the enviable reputation we have earned in Southern California.

Allwork Kerosene Tractor

The Allwork Kerosene Tractor meets every demand—economy, strength, simplicity. Many owners never have need of repairs, while the Allwork fuel—KEROSENE—delivers more power at less expense, without a special carburetor.

KILLEFER Implements

In Los Angeles County we distribute the Killefer line of implements, made-to-order for use on California farms. A complete stock of needed implements of this well-known line always ready for delivery.

OLIVER Implements

Another interesting note is that we are now distributors of the celebrated Oliver Chilled Plow Works line—including all the implements that have made the Oliver name famous throughout the world.

Get a WADE Bean Thresher

Buy the thresher built especially for the man who wants a machine for his own crops. You do not have to

thresh with the Wade "by the day" to make it pay for itself and a good profit besides.

Built for Western Conditions

The Wade thresher is manufactured by R. M. Wade & Company, Portland, the oldest agricultural implement

house in the West. It is especially designed to meet Western conditions.

Plenty of Separation Surface

The Wade has plenty of separation surface and strong, well controlled air current. Doesn't crack the kernels. Built of best materials throughout.

Threshes beans, peas, china peas, lentils, soy beans, vetch or other legumes. Capacity 20 to 35 bushels an hour.

Write for Descriptive Folder

If your dealer hasn't the Wade, write us for literature and full information on this wonderful machine.

Use the coupon.

Poultry at the State Fair

As usual California's showing of commercial poultry was shy at the state fair. Judge R. V. Moore said that nearly all classes other than Leghorns were strictly up to form and made extremely fine showing both in number and quality.

Superintendent Mitchell was not able to be in the active work, but was represented by his son.

Some of the finest Bronze turkeys ever seen were there. There was also a great showing of Belgian hares, cavies and pigeons.

The awards in the utility classes are:

AMERICAN CLASS

Barred Plymouth Rock

Cock—1, P. A. Bryant; 2-3, Gill & Warrick.

Hen—1, Gill & Warrick; 2-3, Cameron Bros.

Cockerel—1-2, Gill & Warrick; 3, Bryant.

Pullet—1, Roscroft Plymouth Rock Yards; 2, Gill & Warrick; 3, Bryant.

Cockerel Bred Pen—1, Gill & Warrick; 2, Bryant; 3, Cameron Bros.

Exhibition Pen—1, Cameron.

Pullet Bred Pen—1, Poppy Hill Poultry Farm; 2, Roscroft Yards.

White Plymouth Rock

Cock—1, Plymouth Rock Poultry Yard.

Hen—1-3, Roselawn Farm; 2, Howard Quality Poultry Farm.

Cockerel—1-2, W. R. Brooks.

Pullet—1-2, Brooks; 3, Roselawn Farm.

Pen—1, Brooks; 2, Howard Farm; 3, Plymouth Yard.

Partridge Plymouth Rock

H. W. Barnett was the only exhibitor of Partridge Plymouth Rocks.

Silver Wyandotte

Cock—1-2, John K. Brown; 3, Frank Blackwell.

Hen—1, Blackwell; 2, Brown.

Cockerel—1-2, Brown; 3, H. D. Poisal.

Pullet—1, Brown; 2-3, Poisal.

Pen—1-2, Brown.

Golden Wyandotte

Manuel Roberts was the only exhibitor of Golden Wyandotte.

White Wyandotte

Cock—1, James Whyte.

Hen—1, Arthur W. Huskins; 2, George H. Buhman; 3, James Whyte.

Cockerel—1, Whyte; 2, Thos. L. Bell.

Pullet—1-2, Whyte; 3, Buhman.

Pen—1, Jesse Moore.

Partridge Wyandotte

Manuel Roberts was the only exhibitor of Partridge Wyandottes.

Columbian Wyandotte

Cock—1, George L. Aumock.

Hen—1-2, Aumock.

Cockerel—1, Howard Farm; 2, Mrs. P. H. Chaussee; 3, Aumock.

Pullet—1, Howard Farm; 2, Chaussee; 3, Aumock.

Pen—1, Chaussee.

Single-Comb Rhode Island Red

Cock—1, Wards Poultry Farm; 2, Red Feather Pens; 3, Fowler.

Hen—1-2, Wards Farm; 3, Fowler.

Cockerel—1-2, Wards Farm; 3, G. W. Wittenberg.

Pullet—1, Paul H. Hecker; 2, S. E. Elliott; 3, Wards Farm.

Pen—1, Wards Farm; 2, Bryant; 3, Fowler.

ASIATIC CLASS

Light Brahma

Cock—1-2-3, Stuart Poultry Farm.

Hen—1-2-3, Stuart Farm.

Pen—1, Bryant.

Dark Brahma

Hen—1, A. J. Coe.

Partridge Cochins

P. A. Bryant was the only exhibitor of Partridge Cochins.

Black Langshan

Cock—1-2, James H. Crabtree; 3, Erwin Weisner.

Hen—1, Crabtree; 2, Erwin Weisner.

MEDITERRANEAN CLASS

Single-Comb Brown Leghorn

Hen—1, Mrs. M. C. Albrecht.

Cockerel—1, John D. Roberts.

Pullet—1-2, John D. Roberts.

Single-Comb White Leghorn

Hen—1, Edw. H. Buttler; 2-3, L. J. Amos.

Cockerel—1, J. W. Blackman; 2, John D. Roberts; 3, Amos.

Pullet—1-2, John D. Roberts; 3, Amos.

Pen—1-2, Amos; 3, Buttler.

Rose-Comb White Leghorn

R. G. Baxter was the only exhibitor of Rose-Comb White Leghorns.

Buff Leghorn

Cock—1-2-3, Manuel Roberts.

Hen—1-2-3, Manuel Roberts.

Cockerel—1, C. M. Newbert; 2-3, Manuel Roberts.

Pullet—1-2, Manuel Roberts; 3, Wrieden Poultry Farm.

Pen—1-2-3, Manuel Roberts.

Single-Comb Black Minorca

Hen—1-2-3, Mrs. M. C. Albrecht.

Cockerel—1-3, G. W. Wittenberg; 2, Spaulding.

Pullet—1-3, Wittenberg; 2, Spaulding.

Single-Comb White Minorca

Earl E. Sanders was the only exhibitor of Single-Comb White Minorcas.

Single-Comb Buff Minorcas

Wendell R. Mortimer was the only exhibitor of Single-Comb Buff Minorcas.

Blue Andalusian

H. E. Belcher was the only exhibitor of Blue Andalusian.

Single-Comb Ancona

Cock—1, Crabtree; 2, Manuel Roberts; 3, Albert N. Reay.

Hen—1-2, Reay.

Cockerel—1, Reay; 2-3, John J. Wangan.

Pullet—1, Wangan; 2, Reay; 3, Crabtree.

Pen—1-2, Reay.

ENGLISH CLASS

Dark Cornish

Cock—1, A. O. Johnson; 2-3, B. P. Lausten.

Hen—1, Johnson; 2-3, Lausten.

Cockerel—1-2, Johnson; 3, Lausten.

Pullet—1-3, Johnson; 2, Lausten.

Pen—1, Lausten.

Single-Comb Buff Orpington

Cock—1-3, Braemar Ranch; 2, Sequoia Farm.

Hen—1-3, Braemar; 2, Sequoia.

Cockerel—1-3, Samuel Abrams; 2, Braemar.

Pullet—1-2-3, Braemar.

Pen—1-2, Braemar.

Black Orpington

Cock—1-2-3, Sequoia.

Hen—1-2-3, Sequoia.

Pullet—1-2, Sequoia.

Pen—1, Sequoia.

White Orpington

Cock—1, Sequoia; 2, R. P. Lutz.

Hen—1-2, Lutz.

Cockerel—1-2, Sequoia.

Pullet—1-2, Sequoia; 3, Lutz.

Pen—1, S. D. Koons; 2, Lutz.

Blue Orpington

Sequoia Farm was the only exhibitor of Blue Orpingtons.

POLISH CLASS

Bearded White Polish

Cock—1, Mrs. Blanche Meredith; 3 R. G. Baxter.

Hen—2, Meredith.

Golden Polish

Mrs. Meredith was only exhibitor of Golden Polish.

Non-Bearded Silver Laced Polish

A. J. Coe was only exhibitor of Non-bearded Silver Laced Polish.

HAMBURG CLASS

Silver Spangled Hamburgs

Hen—1, A. H. Patterson.

FRENCH CLASS

White Houdans

Lutz only exhibitor of White Houdans.

Mahogany Russian Orloff

Wendell R. Mortimer only exhibitor.

CONTINENTAL CLASS

Silver Campines

Manuel Roberts only exhibitor of Silver Campines.

EGGS

White eggs—Special best dozen white eggs, Howard Farm.

Brown eggs—Special best dozen brown eggs, Lutz.

Plymouth Rock eggs—Best dozen Plymouth Rock eggs, Howard Farm; second best dozen, Lutz.

Wyandotte eggs—Best dozen Wyandotte eggs, Mrs. Chaussee.

Rhode Island Red eggs—Best dozen R. I. Red eggs, Chaussee; second best dozen, Howard Farm; third best dozen, Ward's Poultry Farm.

Leghorn or Anconas eggs—Best dozen Ancona eggs, Howard Farm; second best dozen, Chaussee; third best dozen Leghorn, Amos.

English class eggs—Best dozen White Orpington eggs, Lutz.

French class eggs—Best dozen White Houdan eggs, Lutz.

TURKEYS

Bronze Turkey

Old tom—1, Blackman; 2-3, John G. Mee.

Old hen—1, Sanders.

Yearling tom—1, Sanders; 2, Blackman.

Young tom—1-2-3, R. C. Whitworth.

Young hen—1-2-3, Whitworth.

Yearling hen—1-2-3, Blackman.

White Holland Turkey

A. J. Elliott was the only exhibitor of White Holland turkeys.

Bourbon Red Turkey

Old tom—1, J. J. Berry.

Young tom—1-2, W. E. Lloyd.

Old hen—2, Berry.

Young hen—1, Berry.

Wild Turkey

"Call of the Wild" Turkey Ranch only exhibitor of wild turkeys.

DUCKS

Pekin Duck

Old drake—1, A. J. Coe.

Old duck—1, Coe.

Young drake—1-3, Braemar Ranch; 2, Coe.

Young duck—1-3, Braemar Ranch; 2, Coe.

Rouen Duck

Old drake—1, Mrs. Emma V. Miller; 2, Bryant.

Old drake—1-2, Miller.
Young drake—1-2, Miller.
Young duck—1, Miller.

White Muscovy Duck

Old drake—1, Mrs. Bessie B. Fowler; 2, Mrs. Albrecht.

Old duck—1, Albrecht; 2, Fowler.
Young drake—1, Fowler.
Young duck—1, Fowler.

Fawn and White Indian Runner

Old drake—1-2-3, W. McGee.
Old duck—1-2-3, McGee.
Young drake—1-2-3, McGee.
Young duck—1-2-3, McGee.

Old Buff Duck

Wm] McGee, only exhibitor of Old Buff Ducks.

GEESE**Toulouse Geese**

Mrs. Fowler only exhibitor of Toulouse geese.

Embsen Geese

John G. Mee only exhibitor of Embsen geese.

Poultry Queries

Conducted by J. A. Koethen

Cholera, Perhaps

In your issue of September 4, J. B. P. of Lodi asks what causes his hens to have certain troubles which he describes. I have had hens die that way from eating rotten potatoes. There is no remedy except in very light cases, where milk will help.—Mrs. A. W. Reeves, Anaheim.

Gizzard Worms

Will you please give me information on a cure for worms found in the meat of the gizzard in chickens. They are small worms about 1½ inches long.—Subscriber, Hollister.

This gizzard worm is dispharagus nasutus, another variety of the round worm so frequently found in the intestines of fowls. The treatment recommended by Dr. Beach of the poultry division of the college of agriculture, and several times mentioned in this column, should be effective with these as well as with the intestinal worms: Mix a pound of tobacco dust with 50 pounds dry mash, and keep before the birds three or four weeks. Then discontinue the treatment for the same length of time, after which they may have it again for three or four weeks. The treatment may be continued at intervals in this way till

all signs of worms have disappeared. For those who do not care to use tobacco, oil of turpentine is a time honored remedy. Beat a new laid egg with 1 tablespoon oil of turpentine and mix thoroughly by shaking. Give a teaspoon of the mixture night and morning for a few days. Another remedy is powdered areca nut. Divide ¼ of an ounce of the areca nut into four powders and give one powder each morning while the bird is fasting, with a dose of olive oil two hours after each powder. The tobacco treatment is the only one suitable for a whole flock. The others might be useful for individual cases.

Wing-Clipping

Does clipping the wings or tails of pullets and hens to keep them from flying over fences stop them from laying?—Subscriber, Lodi.

I do not see how it could unless the feathers were clipped so close as to draw blood. Some poultrymen make a practice of clipping the wings of all chicks when they are about a week old, and they say the chicks do not suffer in the least.

GETTING THE BEST OF CIRCUMSTANCES

Rumor has it that Southern California fanciers are a bit discouraged and disinclined to undertake the staging of the usual winter shows. This is to be expected and is rather a hopeful sign than otherwise. If shows must be held at a loss and without suitable accommodation, and without any great interest on the part of anyone but the exhibitors, why hold them? Last fall I attended four shows in three months, and only one was creditable. Some exhibitors had their birds at every one, but the majority exhibited at only one. It is easy to figure how much competition there is if A shows his birds at the October show, while B's come out in December and C's in January. We have had too many shows, and some must be eliminated or fair competition is impossible.

Some day we shall have a suitable building in a suitable location where Southern California fanciers can have a Madison Square Garden show all their own and in the same place every year. That day is not far distant. Next year may see it. This year high prices of real estate and building make it necessary to find some other way.

There is a word that has been so overworked that it has become almost slang, but because it is the word that best fits the case I dare to suggest it as a slogan for fanciers. It is "Concentrate." Last year our exhibitors of fancy stock were spread over four shows, to the despair of the folks who had to write them up and the discouragement of the fanciers themselves. Why not concentrate this year on one?

THE BROODY HEN

Poultry raisers will find that with the raising of the larger breeds, for instance, Plymouth Rocks and Rhode Island Reds, they will have an excess of broody hens. All such hens not used for hatching purposes should be "broken up." This can best be accomplished by interning the broody hen in a well ventilated coop or box which has a slatted or wire bottom. Through this the air can circulate freely and thus aid in reducing the broody fever.

Hens housed in this manner must be well fed from troughs just outside the coop. Skimmilk and buttermilk, meat scraps or tankage are the essential feeds at this time as they aid in maintaining the force and vigor of the egg producing organs.

A cure from broody fever is effected in from three to seven days of such confinement. At the end of this time they may be returned to the laying contingent of the flock in order that a 50 per cent egg production be maintained.

COMMUNITY FAIR

Last Saturday and Sunday the Runnymede Community near Palo Alto held its third annual agricultural and livestock exhibit at the Weeks Poultry Farm. There were agricultural exhibits of nearly all kinds, the show, however, running largely to poultry and poultry supplies. One of the features was a chicken dinner.

Avery 6-Cylinder Tractor—Model C

A Big Success in a Small Tractor

This Avery 6-cylinder tractor is proving a big success in practically every kind of farm work. It gives to the man operating a small tractor outfit the same certainty of service that Avery owners are getting from the larger Avery machines.

This small tractor, like the larger sizes of Avery tractors, is built complete in the Avery factories. Has a powerful six-cylinder motor with extra strong crankshaft and connecting rods—especially designed for heavy-duty work. Also, centrifugal governor entirely enclosed, running in oil—high-tension magneto—thermo-siphon cooling system—selective sliding transmission—roller and ball bearing equipped, etc. Can also be equipped with a conveniently located belt pulley at a slight additional expense, so that it can be used for all kinds of lighter belt work as well as field work.

A thoroughly dependable, high-grade tractor at an attractive price, which in-

cludes regularly such accessories as platform, seat, tool-box, drawbar, air-cleaner, etc.—equipment that makers of other small tractors charge extra for.

Now is the time you need a tractor most. Now is the time to get it.

We also build another small tractor, the Avery Model "B" 5-10 H. P. size with a similar design. Ask for special circulars describing these machines or

Write for the Avery Catalog

and learn about the complete line of Avery machinery, including these small models and seven larger sizes of Avery Tractors, 8-16 to 40-80 H. P. built with "Draft-Horse" Motors and "Direct-Drive" Transmissions. Also, Avery Roller-Bearing Champion "Grain-Saving" Threshers and Silo Fillers, Avery Motor Cultivators, Avery "Self-Lift" Plows, "Self-Adjusting" Tractor Disc Harrow and other Avery Tractor-operated machines.

237 Howard St., San Francisco, Cal.

COMMERCIAL AND PRODUCTIVE COTTON INTERESTS

The cotton industry of the Southwest has become such a factor in the upbuilding of that section that cotton growers, cotton handlers and others interested in the country's welfare have felt for some time there should be formed an organization which should have to do with its commercial and even its larger cultural interests. At the time of the first meeting of horticultural commissioners and others, which was to have been held in August in Los Angeles but which was recalled because of the absence of Director Hecke in the East, a preliminary meeting was held at the chamber of commerce at Los Angeles. This meeting adjourned and reconvened on September 14 at Los Angeles chamber of commerce. W. E. Keller, president of the Globe Milling Co. of Los Angeles, was made president of the organization; D. C. Mote, state entomologist of Arizona, secretary; George P. Clements of the L. A. chamber of commerce, assistant secretary. The name selected for the new organization was International Cotton League of the West. Various committees were appointed, including those on quarantine, pest control, legislation, labor, pure seed and general development of the cotton industry. In addition there was an executive committee consisting of Kenneth D. Oliver, Arthur Cardwell, A. L. Hobson, Jas. A. Pawley, Geo. H. Hecke, E. W. Hudson, Major Nicholson, A. Y. Greer and H. B. Atha. At an adjourned meeting held September 15 the following resolution was adopted:

"We, the International Cotton League of the West, in meeting at Los Angeles, California, September 15, 1920, urgently request the federal horticultural board to use their best endeavors to bring about a federal regulation making mandatory the cleansing and, if necessary, the disinfection of all railroad cars that have been used for hauling cotton seed and seed cotton, at the time and place of unloading."

The league recommended a meeting the first week in December at the call of the chairman and quarterly meetings thereafter.

A WAY TO FAME

Fame is very easily acquired. All you have to do is to be in the right place at the right time and do the right thing in the right way—and then advertise it widely.—Kansas City Star.

Household Department

MY GRAN'SON

My gran'son is a frisky lad,
With nose intensely freckled;
Not very good, nor very bad.
His conduct summat speckled.
He makes no efforts to excel,
For leadership's not wishin'.
But when he gits out in th' hills
He trims his gran'son's fishin'.

He ain't no use fer fancy lures,
Like flies an' silver spinners,
But when he's fishin' gran'son's sure
She'll have trout fer her dinner.
He'll go an' dig a mess o' grubs
From out some stump decayin',
An' make th' rest jest look like dubs
When he's his ketch displayin'.

When I am fishin' I walk light
Fer fear them fish'll hear me;
Just sneak along, keep out sight
An' don't want no one near me
But this young tyke just sloshes 'round
An' wades up through th' riffles
A-makin' all kinds of loud sounds,
But most partick'ier whistles.

What makes me sorest is when I
Have whipped some pool 'bout ketchin'
A single fish; he'll santer by
An' start in whoppers snatchin'.
His gran'ma says: "He's got th' knack!"
Knack nothin'! Luck's what ails him;
It's luck that fills his fishin' sack,
An' his luck never fails him.
—C. M. Jackson in San Francisco Bulletin.

GRANDMOTHER GOES DOWN THE MOUNTAIN

By Mary R. Reynolds in Farmers Wife

LOSE by the entrance of Big Cove huddled the rude, clay chinked log cabin. It was larger than many of the others, which one came on suddenly in sheltered nooks on the mountain, but The Outsider wondered, as she looked at its small dimensions, where sleeping place was found for all the little mountain boys and girls who called it home.

The roof was full of holes and the floor was bare and full of cracks. There were two beds in each small room, beds made of pine slats nailed together, and underneath each was a little trundle bed which was pulled out at night. The few rude and uncomfortable chairs were also of pine slat construction. There were no screens, no panes even, in the windows, and the only thing in the cabin that looked homelike to The Outsider was a row of canned fruit in a wall closet.

At an age when girls in the outside world are just entering high school, a mountain girl had married and gone as a bride to this cabin which consisted then of only one room. She had spent her childhood in poverty on the mountain, and, in poverty on the same mountain, shut away from the outside world, she was to spend most of her married life.

The days of the little bride soon became a dull, monotonous round of hard daily work varied only by the arrival of a new baby every year or two. Then even new babies, by the frequency of their arrivals, soon lost their novelty. In time two more rooms were added to the cabin, but the three provided none too much space to shelter the now large family.

Few neighbors came over the rough road that led past the cabin and there was no place to go except to a neighbor's, even if Mrs. Moore's family could have managed without her for more than a few hours at a time. Her daily life was as unvaried as the life of a woman back in the mountains can be.

Years went on; the children grew up and the older ones began to marry and go to homes of their own. Life was still unchanged for the woman on the mountain except that she now "tended" her grandchildren instead of her own children.

One day, about eight years ago, word came down the trail to Big Cove that a woman "from the outside" was going to hold a meeting in the schoolhouse "farther over" and that all the mountain women were asked to come. Here, at last, was something new and different, and Mrs. Moore, with a heart thrilled with excitement, walked the five miles that lay between her cabin and the meeting.

A home demonstration agent sent out by the United States department of agriculture and the state college had come up over the rough trails to tell and show the mountain women just how to can, a household art of which they were entirely ignorant. Mrs. Moore was one of the excited company that gathered to this won-

derful occasion.

The earnest attention given to The Outsider's every word and act would have flattered any public speaker, and most of those present by the end of the demonstration had learned at least the basic principles of canning. Government bulletins which explained just how to can in the most approved ways were given to the women to carry home and accepted by them as treasures indeed.

With a larger territory to cover than ever that which the old time circuit riders had, the home demonstration agent did not find opportunity to visit that particular mountain community for two years. When she came again it was to organize a home club, for now Alabama had enough home economics workers so each one could do more intensive work in her territory.

The first mountain home which she visited when she started out to enlist members for the club was Mrs. Moore's, and the first thing that caught her eye in the home were four yellowed and worn government bulletins hanging on the wall. They were the ones that she had given the mountain women at the meeting two years before. Afraid to leave them anywhere where the children might reach and tear them, their owner had nailed them to the wall so that they hung on a level with the eye. The neighbors were allowed to read them right there, under her eye, but she had never been able to persuade herself to loan one of these treasured gifts.

In a rude way, doing the best she could with what she had, Mrs. Moore had attempted to follow the instructions she had been given at the one demonstration and which were printed in the bulletin. The row of canned fruit to which she pointed proudly was the result of that year's efforts. Proudly The Outsider saw them.

At that time home clubs were unknown in that part of the Appalachians and Mrs. Moore listened eagerly to all the home demonstration agent told of other clubs in other parts of the state and nation, and what they meant to the women members. With a happy face, lighted by a desire to recapture the opportunities that should have been her youth's measure, Mrs. Moore asked to become a member and promised to follow all suggestions.

Such tomatoes as grew on her one-tenth acre club plot that year! In the regular garden she grew more and better vegetables than ever before and all that were not eaten fresh she canned. Early in the season she dug into her little savings and bought a canner, with which, under the tutelage of the home demonstration agent, she put up superior products. Her tins of vegetables were sold at an excellent profit that fall, and with the proceeds she bought a good cooking range, her very first.

A poultry club was then organized by the home demonstration agent and the little mountain grandmother became one of its first members. She built up her chicken yard, following directions given her by the club leader, until she had some of the best chickens on the mountain. At the same time she kept up her garden and canning work. During all this time she never missed a meeting of poultry or canning club, often walking miles to attend.

Last spring the manager of one of the largest estates in Alabama, hearing of the splendid work that this wonderful old lady up on the mountain was doing, offered to pay her expenses to the short course at the Alabama Girls' Technical Institute at Montevallo. It was necessary, however, to meet and satisfy her mountain pride before she would accept the opportunity which was offered her. Then she said she reckoned she could go, as she had one black dress saved.

So this glorious little grandmother went down the mountain and into the outside world, which she had never seen. No girl at the short course could rival her in eagerness and enthusiasm. It was the first holiday she had ever had and for the first time she rode on a train.

She went to every class given in the short course and the rest of the time she inspected the college. The letters she wrote back to her children

The Cultivator Patterns

BE SURE TO SEND SIZE

3101. An Attractive Model for Slender Figures—Cut in three sizes: 16, 18 and 20 years. Size 16 will require 5 1/2 yards of 36 inch material with 3 yards of ribbon or material 5 inches wide for the sash. Width of skirt at lower edge is 1 1/2 yard. Price 10 cents.

3152. Girl's Dress—Cut in four sizes: 6, 8, 10 and 12 years. A 10 year size will require 3 3/4 yards of 36 inch material. Price 10 cents.

3325. Ladies House Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size will require 6 yards of 36 inch material. The dress is of comfortable width at the foot. Price 10 cents.

3337. Child's Play Suit—Cut in four sizes: 2, 4, 6 and 8 years. A 6 year size will require 2 1/2 yards of 27 inch material for the dress and 1 1/2 yard for the bloomers. Price 10 cents.

Los Angeles

and grandchildren were full of the wonders that she was seeing and hearing. Perhaps the sight that fascinated her most was of the cows in the college barns being milked by electricity rather than by tired feminine hands, as they were on the mountain. However, "the big stove ten feet long with a soup pot that holds 25 gallons," "the mill hopper that they make light bread in" and "the poke stalks (asparagus) on lettuce" all came in for comment in her letters home.

Little escaped her keen eyes and she was tireless in seeing all that was to be seen, although she does confess in one of her letters that that day she had walked and looked until she had "hiccups in her legs."

When the last day came, the little grandmother wept as she thanked those who had made her good time possible, but her eyes were starry when she reached the cabin at the entrance of Big Cove and began to recount her adventures to her children and grandchildren.

All last summer she was busy putting into practice what she learned

at the short course. When the home demonstration agent visited the cabin last fall she found her in a splint rocker, rocking back and forth outside the door, singing short course songs to the newest grandchild. Proudly she displayed her thousand tin cans of tomatoes and beans which were for sale, and then still more proudly led the way to the home supply. Before her the astounded and deeply thrilled home demonstration agent saw the largest collection of canned fruits, vegetables and preserves that she had ever seen.

When they were once more seated outside, the good news was broken. Mrs. Moore had persuaded her husband to sell the poor mountain farm on which they had just eked out a living by the hardest work and to buy a little one in the valley.

The farm was bought this last winter and the Moores moved down from the mountain, which had been their home for so long. On the farm is a new farm bungalow and its mistress is the happiest woman in the valley. The home demonstration agent helped

the heroic woman pick out the furniture for the house. It was the first "store" furniture that she had ever owned, and every bit was bought with the proceeds from her club garden and chickens.

For some time it had been planned to have a demonstration orchard in the valley, and when the mayor of the town heard of Mrs. Moore's fine work and her faithfulness as a club member he offered to give her as large an orchard as it was thought she could handle. This spring of 1920 she prepared the ground and set out the mayor's gift of 35 peach trees, five apple trees, three pear, two cherry and six assorted grapevines.

The trees and vines will be cultivated according to directions given by the home demonstration agent and the orchard will be available at any time for demonstrations in fruit raising. The little mountain grandmother's general progressiveness has awakened up her valley neighbors and they are eagerly learning from her the new ways and following her enthusiastic progress as best they can.

HOUSEHOLD QUERIES

Three-in-One Dessert

Will you please publish recipe for Three-in-One Dessert, published in the Cultivator several years ago. It is a cream pie baked in the crust. When frosted it is cake; when served with a pudding sauce it is a pudding.—Subscriber, Santa Ana.

We remember publishing this "Three-in-One" recipe, but our recollection as to the time is no more definite than our inquirer's. We index many of the most called for recipes but it is not possible to index all. We have spent several hours looking through old files of the Cultivator, but have not yet been able to find it. Have any of our readers saved this recipe? If so, we will appreciate very much their sending it in and will extend subscription credit.

Syrup from Muscat Grapes

About the time that sugar became so scarce there was a recipe in the Household Department for making syrup from Muscat grapes. I lost my Cultivator that had it in. Will you please reprint.—Subscriber, Fallbrook.

In the Cultivator of October 12, 1918, we gave directions for cooking with grape syrup, making cookies, etc., in which Mrs. Linda McNeil spoke of gathering thoroughly ripe Muscats and making syrup from them which was very satisfactory as a sugar substitute; also of making syrup from peaches, adding while yet boiling half as much granulated sugar as syrup. This we hardly think is the recipe referred to by our subscriber, as it gives no method of making and counteracting the acid of the grapes. Our state university has published two bulletins on methods of making grape syrup in a commercial way, which are, of course, too complicated for household use, but do give some hints which the housekeeper may follow. For instance, these bulletins state that ripe grapes contain about seven per cent of tartaric acid which is best reduced by adding calcium carbonate to the grape juice. No proportions are given, but the bulletin states that an excess does no harm, as both the calcium carbonate added and the calcium tartrate formed are insoluble and may be removed from the juice (strain juice through cloth). If our inquirer is in a hurry she might experiment on a small scale, adding calcium carbonate and tasting, then filtering or straining the juice before boiling down to syrup. The Cultivator will request information from the state university and give in this department as soon as received.

Crush grapes, boil and strain to remove juice as for jelly making, add calcium carbonate as suggested, strain again and boil down to syrup. Common baking soda will counteract acid but remains in the juice in soluble form.

Have any of our readers found satisfactory way of making such syrup? We shall be glad to publish and give subscription credit for suggestions received.

Error in Recipe for Eggless Cake

Recipe for eggless cake given in Cultivator of September 11 omitted soda and baking powder. We are repeating entire for convenience of Cultivator housekeepers.

An eggless cake: One cup sugar, one heaping tablespoon any kind of shortening. Cream with the hands. Add one cup sour milk with one teaspoon soda stirred in, six tablespoons cocoa, two cups flour sifted with ½ teaspoon baking powder, pinch salt, teaspoon vanilla. Beat hard and bake in loaf.

Frosting: One cup powdered sugar, one tablespoon cold coffee, teaspoon vanilla and just enough milk or cream to work smooth. Beat well and spread on cake. I leave cake in tin and cut as we use it.—Mrs. W. E. Brown, Callipatria.

Pickled Red Cabbage

Can someone tell me how to make pickled red cabbage?—Subscriber, Watsonville.

Select a firm head of cabbage, cut in half and shred fine a sufficient amount of it to measure about two cups. Place the cabbage in a bowl and add 2 onions, chopped fine, 1 green

See The Owen Before You Decide

Learn why the Owen costs but one-third as much to operate as other units—why it gives you illumination at less per candle-power than kerosene lamps

THE Owen Light & Power Plant is the final type. It has dozens of betterments offered by no other unit. It costs one-third as much to operate as any other unit. It brings you illumination at less than the cost of kerosene lamps.

Note these perfections—superiorities absolutely exclusive in the Owen:

It is fully automatic — starts and stops itself. The batteries are guarded by a patented control. Your engine starts automatically when the batteries are partially discharged. When they are fully charged, then it stops automatically. When you require more current than the batteries should care for, the engine automatically starts.

Even more important than the convenience to you, this automatic control means a tremendous saving. It multiplies many times the life of your batteries. It overcomes costly replacements.

The Owen has a bigger capacity. It

OWEN
ELECTRIC
Light & Power
For Farm and Home

will light 1 to 100 lamps without a flicker. It will run electric motors up to one horsepower.

It has an improved engine. Silent, with a non-leak valve. It always retains its compression. Grinding and scraping carbon are ended with this engine.

These are but a very few of the dozens of betterments. We cannot describe them all here. All the features of this amazing invention are in our free booklet. A post card will bring it to you by return mail. Write today and read it carefully before you decide upon a light and power plant.

Dealers: This Is Your Opportunity

The Owen is your opportunity. Once farmers know the Owen, they will buy no other. In it are combined every looked for feature. Many that farmers never dreamed of are offered in this perfected plant. For the Owen is the final type.

There are a few choice territories still open. They won't be open long. So if you are interested we urge you to write us at once. As a progressive business man you surely want to know the facts. To get them incurs no obligation. So write today.

R. M. OWEN & CO.,
General Sales Offices: 1825 S. Michigan Ave, Chicago, Ill.
Domestic Electric Appliance Co.
715 West 7th St., Los Angeles, Cal.

pepper chopped fine. Now place in a saucepan 1 tablespoon bacon fat, ½ cup vinegar, 1 teaspoon salt, 1 teaspoon white pepper, ¼ teaspoon mustard. Heat to the boiling point, then pour over the cabbage, chill and serve.

HINTS FROM HOUSEKEEPERS

How we do enjoy reading the dear old Cultivator!

The Household Department is the first page I always seek, knowing full well from my experience of the past few years that I will be rewarded by finding something useful and helpful for the housekeeper, besides a jolly good uplifting story and poem thrown in the bargain.

Then each month the housekeeper can learn when and what to plant in her vegetable and flower garden besides other items of interest.

Let's give three cheers for our dear old Cultivator. Long may she live to help, comfort and cheer the hearts of all who will but seek her pages.

I am a firm believer in this old adage, "Some like roses white, some like roses red, but give me mine before I am dead." In plain facts, don't wait until someone is dead before you give your roses (words of cheer); they will appreciate them more while they are living.

I am sending a few suggestions and recipes which may help someone if you care to print them.

To Can Tomatoes Whole

Have ready your cans, tops and rubbers and two kettles and a teakettle of boiling water.

Be sure to select tomatoes slightly underripe and free from decay. Peel and cut out all green or hard parts; put them in your first kettle of boiling water. This cools the water. Now watch and as soon as the water is thoroughly boiling again fill your sterilized jars with the whole tomatoes, add one teaspoon of salt on top, fill to overflowing with boiling water from teakettle and seal at once.

Note—Do not scald tomatoes before peeling; use good sharp knife instead.

Second kettle of boiling water is to let your glass jars stand in while filling. Turn glass jars on side and put into boiling water, turn over and over quickly and glass will never break. I find it better to use just enough tomatoes to fill one or two jars at a time, then they will not be cooked too much, which makes them soft and mushy.

Tomato Catsup

To make tomato catsup that will not sour and at the same time Hooverize on vinegar, scald and peel ripe tomatoes, cook until soft. Let stand in warm place until they are sour, not moldy, but a good sour to the taste. Now press through sieve, and to one gallon of the tomatoes add two tablespoons salt, two tablespoons mustard, one of allspice, one of cinnamon, one teaspoon black pepper, one of ground cloves and one red pepper pod chopped fine without seed. Simmer an hour or more, until as thick as you like and put in jars, jugs or bottles and seal. Jugs and bottles can be corked tight and paraffine poured over. This makes the catsup plenty "spicy." I prefer about one-third or one-half gallon more tomatoes added to that much spice.

This is a good way to utilize tomatoes that are too ripe and soft to be canned whole.

I used about four tablespoons of vinegar to mix the spices before adding them to the tomatoes.

Mock Orange Marmalade

Take two cups carrot, cooked and put through meat grinder, 2 lemons, 1 orange, juice and ground up rind of each, and 1 cup sugar. Cook this mixture slowly until of consistency of marmalade in a covered receptacle (avoid burning). If made in quantity it should be sealed in hot sterilized jars because of the vegetable nature of the product. This is a very successful way of using old, woody carrots to a distinct advantage.

I used several of the cucumber pickle recipes in your recent issues, and liked them fine, only I Hooverized on the sugar and used one-third to one-half Karo syrup, either the dark or light, but not the new maple flavor.

Does anyone know how to can, preserve or pickle casaba?

Thanking you for all the help you have been to me, I will close, wish-

ing you the best of success.—Mrs. H. R. De Hoff, Oxnard.

ON THE TOILET TABLE

By MARTHA

An excellent cucumber wash for the complexion is made by heating the juice of fresh cucumbers to the boiling point, skimming and bottling. One teaspoon of this juice should be applied to the face night and morning, letting it dry on.

A fine nail polish is made of three parts of French chalk to one part of pulverized pumice stone. A little of this polishing powder is sufficient to give a nice luster to the nails.

If you live on a farm and make your own butter, you can make the nicest ointment for your hands by boiling a pint of fresh unsalted butter until it is reduced one-half, then adding a few drops of perfume. This keeps the skin soft and smooth.

An excellent lotion to keep the hair in curl or waves is made by soaking a few quince seed in warm water a few hours. Wet the hair with this and curl or wave it and let remain until dry.

One of the most useful articles one can have on the toilet table is a bottle of boric solution, easily prepared by dissolving one-half ounce of granulated boric acid in one pint of boiled water. To remove pimples, wash the face at night with Castile soap and warm water, then add a little of the solution to water as hot as can be borne. Dip a cloth in the water and apply to the face. This remedy has been found very beneficial and there is nothing better for the eyes if they are red and sore. This solution applied with a soft cloth after the bath will check perspiration and destroy the odor, and to sterilize hair brushes and combs, wash and dry them, then put three parts of the solution in one part water, dip the bristles in the water, let remain half an hour, then dry again.

To keep all articles of brass, silver and glass bright and shining, rub with a mixture of coal oil and whiting after they are washed clean. Then polish with a piece of soft flannel and they will shine like new.

COMMUNITY SINGING

Community singing is to receive a real impetus in California this year through the efforts of the extension division of the University of California, according to Director Leon J. Richardson, who today announced plans whereby the extension division can cooperate with any community in preparing, aiding, and presenting programs of national music.

Clubs, schools, community organizations or other bodies wishing to give an entertainment in the music of any nationality—America, England, Scotland and Ireland, Russia, France, Italy, Germany, Spain, the Orient, Scandinavia, Poland—may apply to the extension division, which will send a lecturer to the community to give an interesting illustrated talk on the life and customs, arts, and music of the folk of the particular nation.

Aid is also given in the preparation of the musical program. Local talent may be trained along lines suggested by the university extension division. If desired, soloists selected from among the best musicians in California may be assigned by the extension division to assist the community and to take the more prominent parts in the song festivals.

AUTO OPERATES MOVING PICTURES

An electric generator which can be attached to an automobile and supply enough current to run either a motion picture or stereopticon machine and to light a small hall is the latest innovation in the program of the University of California extension division to furnish movies to the remotest town, school or church in the state. It is now possible for any organization in the state to have its picture show at its meeting place whether there are proper electrical connections or not.

Some 233 motion picture reels on varied topics of wide interest are now available at the University of California extension division for use throughout the state. The films include industrial and scenic views from all parts of the world, an interesting assortment of motion pictures of the war, and on general topics.

Waterfy Your Home With the Leader

Putting in a water system to supply your home and your stock deserves careful consideration. A mistake is serious and expensive. A convenience that doesn't work right, that has to be tinkered with, is an inconvenience.

Don't run any risk. Be safe, sure, certain. Install the

Leader

Home Water Systems—Leaders in fame as well as in name.

We know all systems, but we sell the Leader because it has been proven best by years of test. It will last a life time. It is the only home water system where the tanks and pumps are manufactured, and the whole system completed and tested as a unit in one factory. Since 1903 the Leader has given satisfaction.

If you don't know the local Leader dealer, write us.

BEANS

California Lima Bean Growers Association, September 20.

The association has not yet commenced to quote and sell new crop Limas and baby Limas. The current market as indicated by quotations of independent

shippers has apparently shown a steady though not rapid decline during the past two weeks and stands now on the basis of about 9 cents on regular Limas and 8½ on baby Limas, f.o.b. coast. The harvesting is proceeding quite rapidly under favorable weather conditions and will be completed earlier than usual if present favorable weather continues for two or three weeks longer.

GRAIN AND FEEDS

Grain Exch. prices bid Sept. 21:

Barley: Carlots, on track, 2.07½@2.16½.

Bran: Kansas, 49.00@51.00.

Milo: Carlots, 3.16½@3.23; No. 3, Eastern Milo, blk., 2.35.

Corn: Blk., Yellow, No. 2, 2.72½.

Wheat: Utah-Idaho, S. B. delivery, 57.50@59.00.

HAY

Alfalfa Growers of California, September 22:

A number of our members have expressed the opinion that the association was accountable for the slump of several dollars in the alfalfa market about six weeks ago. This is not the case, but we admit that we did not consider it advisable under the circumstances to attempt resisting the decline; we felt safe in assuming that it would not be serious and that prices would soon adjust themselves again on a sound basis, which they did. The temporary decline was the result of outside growers forcing their hay on the market in excess of the current demand. Before the existence of the association, such an instance to attempt resisting the decline; naturally have assumed much larger dimensions, and would have led to glutting and demoralization of the market. The association is of course only able to direct distribution of marketing production of its members, and the extent to which it can be determining factor in the stabilizing of the market and in preventing unjustified declines is therefore dependent on the amount of marketing acreage in the association. Not a few of our members seem to be of the opinion that the association should all the time try to crowd up prices, but such a policy of "get all you can" would be as short sighted on the part of the growers as the "skin the farmer" policy of buyers proves short sighted in the long run. Your management considers as the most important task of the association that of protecting the grower against prices which are below cost of production, next to obtain for the grower remunerative prices, and after that to maintain these remunerative prices. It is plain that prices can only be maintained remunerative to growers in the long run, if they are in the same way also kept remunerative to our customers, the hay users and dealers. This is at the same time the only way in which a permanent solution can be found of the serious problem of the state, and nation wide shortage of the milk, butter, etc. production. To fully accomplish this in our state, our association must have more members and you can therefore do nothing that benefits you more than to bring into the association those of your neighbors who are still outside of it. According to the state horticultural commission there is now an embargo against all shipments of alfalfa from Utah and certain parts of Idaho and Colorado on account of the weevil. A. W. Scott's market report shows that the alfalfa weevil has also been discovered in Washoe and White Pine Counties, Nevada.

There were approximately 930 tons of hay of all kinds received on the Los Angeles tracks the week ending September 18 and 310 tons held over as against 1200 tons the week before.

STATE FAIR NOTES

(Continued from Page 415.)

the Poland China breeders at a meeting held the week of the state fair when it was decided to raise the annual dues from one dollar to \$15. The money will be used in breed promotion work. At the same meeting an additional amount near \$500 was subscribed. The following officers were elected for the ensuing year: George V. Beckman of Lodi, president; J. F. McSwain, vice president; H. K. Dickson of Bakersfield, secretary-treasurer; J. F. Lehman of Lodi, A. Buckland of Fresno, H. L. Graham of San Fernando and R. J. Yates of Orland, directors.

* * *

One of the pleasant affairs held at Sacramento during the week of the state fair was the annual dinner given by the Western Berkshire Congress. The breeders present felt that they had made marked progress during the year, and the general opinion was expressed that the coming year would find the breed nearer the goal that has been determined upon. At the meeting it was announced that the resignation of the field representative, Bruce S. Bennett, had been tendered and accepted.

* * *

At the annual meeting of the California Jersey Cattle Club the following officers were elected: Judge Peter J. Shields, Sacramento, president; J. E. Wherrel, Riverside, vice president; Professor V. C. Bryant, secretary; N. H. Locke, Lockeford, treasurer. Other members of the board of directors are: E. Greenough, Merced, and S. F. Williams, Chico.

LIVESTOCK NOTES

Judging teams representing 11 high schools and consisting of 131 boys were entered in a judging contest held the opening day of the fair. Each school was represented by a team of three boys. The Lodi school was awarded first place, Esparto second, Napa third and Kingsburg fourth.

Harry L. Redd, one of the most successful Holstein herdsman in the West, formerly with W. J. Higdon of Tulare and more recently with E. D. Barry Jr., Daggett, has just accepted a position with the Jane Garden herd, owned by Fred W. Keisel of Sacramento.

William A. Ward of the firm of Easton and Ward, owners of the Blackhawk Ranch, Diablo, has just returned from a trip to the British Isles in search of Shorthorns. Ward states that cattle values are on a very high level in England and Scotland and that it is almost impossible to make selections at private treaty. E. Lovell, manager of the Blackhawk Ranch, who accompanied Ward, remained in Scotland in the hope of being able to select a shipment from the October sales. Ward declared that the showing made at Sacramento was in many respects better than the leading shows he attended abroad.

Announcement has been made of the formation of a Milking Shorthorn calf club to be inaugurated in the community around Brown's Valley. This will be the first club of the kind to be started in this state.

It is expected that within the next few weeks the first Hereford calf club to be established in this state will be in operation at Esparto. The choice of Herefords was made in view of the fact that several of the best herds in the state are near that community.

George Phillips, shepherd at the university farm, Davis, has recently returned from an extensive visit to his old home in Scotland. Phillips brought over an extensive shipment of sheep for the Anoka Farms of Wisconsin and also a select lot for his own account.

The big sale of the well known Rosamaines Rancho to be held October 19, 20 and 21 has probably attracted more attention than any sale held in this state in years. The entire rancho, which is regarded as one of the most modern breeding plants in California,

together with the complete herd of Holsteins and all the ranch equipment, will pass under the hammer on the above dates. The arrangements for the mammoth sale are in charge of C. L. Hughes of the California Breeders Sales and Pedigree Company, Sacramento, and the auctioneer will be Col. Ben A. Rhoades of Los Angeles. Hughes states that he is receiving inquiries from all over the country and attributes the wide interest to the desire of many Eastern livestock men to operate in this state because of our many superior conditions.

When the Wilotta herd of Shorthorns, owned by William Pierce of Suisun, is sold September 30, it will mark the passing of one of the oldest herds owned in this state. Years ago this herd was conducted under the name of Rush and Pierce and during its active life was counted one of the strong collections of the breed. The herd has always been maintained at Wilotta Ranch and now that the land is in such demand for fruit growing it is no longer practical to attempt to keep the herd together. A feature of the herd that is proving of interest is the unusual amount of King Edward blood to be offered. King Edward was owned by T. S. Glide of Davis and is generally credited as being responsible for greater amount of improvement in the Shorthorn industry of this state than any other bull. The sale will be managed by the California Breeders Sales and Pedigree Company, Sacramento.

The livestock interests of this state will be interested to learn that William Cox, for a good many years in charge of the Herefords owned by the Hereford Corporation of Wyoming, is now in charge of the William Briggs herd near Dixon. Cox is a thorough cattleman and with the class of cattle he will have to work with will doubtless prove a factor in the Hereford business of this state.

J. E. Thorp of Lockeford was awarded a special prize at the recent San Joaquin County fair for having the best score of livestock entries.

R. L. Holmes of Modesto won the county supervisors' challenge cup at the San Joaquin County fair, offered for the best livestock exhibit.

The University of California recently sold the yearling Percheron stallion, L'Aiglon, to a buyer from the Hawaiian Islands. This colt was bred by the animal husbandry division and was sired by Aiglone and out of the mare Poule of Paicines. He is a dark gray of excellent stamp and is one of the best yearlings seen in this state for a number of years.

THE LAST RESORT

"There's one thing left. If this business venture of mine fails I know what I shall have to try next."
"What's that?"
"I shall have to begin writing plays for the moving picture people."

AVOCADO ASSOCIATION TO HAVE AN AVOCADO LUNCHEON

The California Avocado Association will hold its semi-annual meeting on October 9 at Hotel Pasadena (the east side of the Hotel Green), Pasadena.

This meeting will differ somewhat from former meetings as it will last only one day, and they will serve an avocado luncheon instead of the usual evening dinner. This lunch will be the main feature of the day, being a complete meal with avocados served in every course. It will also include several speeches by well known avocado men who will give short talks on subjects of general interest to growers.

There will be a display of fruits and trees in the lobby of the hotel from 10 a. m. until 4:30 p. m.

All interested in avocado growing in any way are invited.

At a recent meeting of the directors the following program for the year was adopted: Increase membership to 400; continue study of varieties; advance department of budwood selection; simplify and encourage keeping individual tree records; complete listing of avocado trees planted in California; list fruit supplies and market opportunities; consider steps towards establishing marketing center; recommend standard shipping carrier; extend educational campaign; urge revision of university's correspondence course in avocado culture; continue cooperation in experiments by citrus by-products laboratory; devise cooperative plan to discourage stealing of fruit.

FIRST ANNUAL FRUIT GROWERS AND EXHIBITORS' MEETING AT STATE FAIR GROUNDS

At a meeting of fruit growers and exhibitors, held under the auspices of the state department of agriculture in the assembly room of the main agricultural building at the state fair grounds such interest was displayed that it was decided to make it an annual event. There were approximately 75 persons present who listened intently in spite of the musical accompaniment from the various exhibits in the building. The meeting was called to order by Director Hecke of the state department of agriculture. President George C. Roeding of the state agricultural society gave an address of welcome in which he outlined some of his hopes and aspirations for the state fair and called attention to some of the very effective work which has been done.

Addresses were made by those who placed the ribbons on the feature and fruit exhibits, also by R. N. Wilson, secretary of the agricultural legislative committee, who spoke briefly on the progress being made and of the general plan and scope of the work being carried on by this most important organization.

AN IMPROVEMENT

"Do you think the world is improving?"
"Of course. You hardly ever hear of a young girl who speaks pieces nowadays."

STATE JERSEY BREEDERS

The California Jersey Breeders Association held its annual meeting on the fair grounds at Sacramento, September 7. President Thorp presided. Dues were raised to \$2 per year. Treasurer reported balance on hand of nearly \$100. Guy Miller presented matter of annual meeting of the A. J. C. C. and suggested that a national association be urged to place a representative in the West. Mr. Fortini presented matter of accredited dairy herds in California. Chairman appointed committee to take up matter with Drs. Harding and Iverson. Messrs. Fortini, Smith and Bryant were appointed.

The following officers were elected: President, Judge Peter J. Shields; vice-president, J. E. Wherrell; secretary, V. C. Bryant; treasurer, N. H. Locke; directors, S. F. Williams and E. E. Greenough.

It is felt that only such judges for the state fair should be selected to judge Jersey cattle as are approved by the American Jersey Cattle Club. Guy H. Miller, Judge P. J. Shields and J. H. Sawyer were appointed committee to present this to fair management. It was agreed that members of the association should furnish at least 30 heifers ranging in age from six to 15 months to colonists at Delhi at a price not to exceed \$165 per head. Messrs. Thorp, Fortini, Coppini, Wherrel and Greenough were made committee to take this up with management of the state land settlement.

In our anxiety over the shortcomings of the other fellow, few of us realize that he is just as worried over our shortcomings.

WEATHER REPORT

RAILSBACK SERVICE

Unusual activity is in evidence among the implement and tractor dealers of Southern California in the shifting of many of the well known lines and the establishment of branch houses and new dealers. Most noticeable, perhaps, is the rapid growth of the L. M. Railsback Company, which has just taken the distribution of Allwork tractors for the California, Nevada, Lower California and the Hawaiian Islands. This company is also distributor for Los Angeles County for the entire line of the Oliver Chilled Plow Works, Killefer Mfg. Co. deep tillage tools and Hardie Mfg. Co. sprayers. "Railsback Service" is the slogan and carries with it all that the phrase implies. Parts departments will be maintained in Los Angeles and Sacramento for the tractor; and expert service men will be on hand to give their aid to the dealers handling the Allwork tractor. It will not be necessary for farmers to lose any time in making repairs of either tractors or implements as parts and men will be available at short notice. A large sales organization has been built up and will keep in close touch with farmers' needs, and deliveries will be prompt.

Young Trees

YOUNG TREES

or bearing trees will not thrive unless protected from pest and disease.

NICOTINE-SULPHUR (dust)

keeps them free from Aphis, Thrip, Red Spider and other pests.

THE American Beauty Dust Sprayer

is unequalled for the work. Kill the pests and save the vigor of your trees.

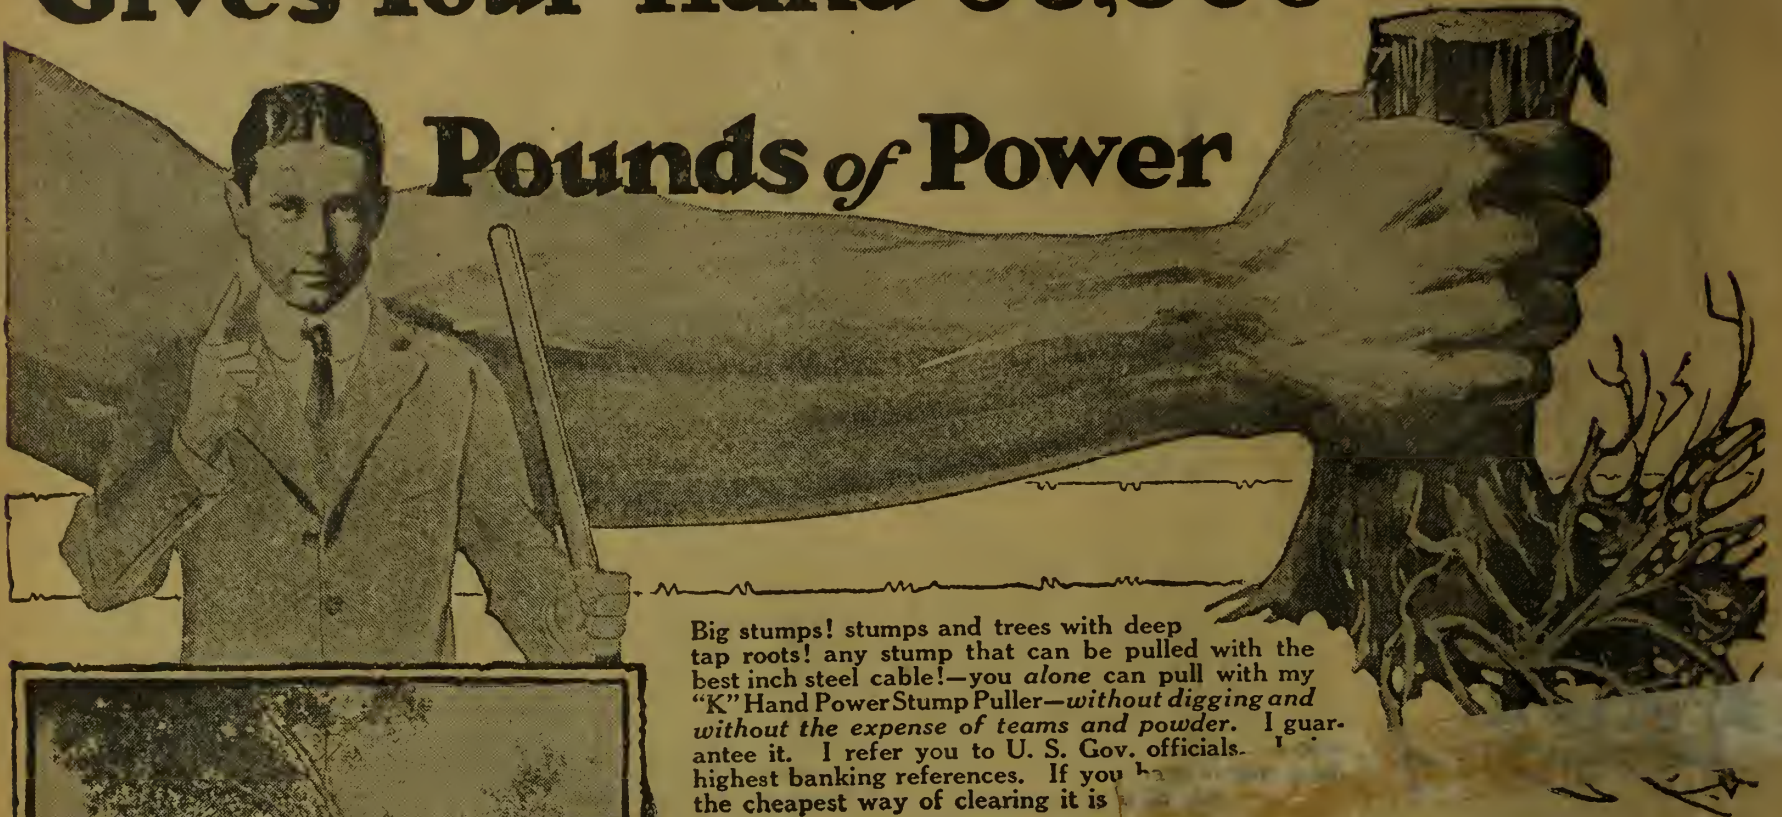

The California Sprayer Co. 6001-11 Pasadena Ave.
Los Angeles, Cal.

My K Hand Stump Puller

Gives Your Hand 96,000

Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—without digging and without the expense of teams and powder. I guarantee it. I refer you to U. S. Gov. officials, highest banking references. If you have the cheapest way of clearing it is

HAND POWER Stump Puller

Frank Hance, a one-armed farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. Works equally well on hillsides and marshes where horses can not work

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."
Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer We are making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write us today for full information and for free book on Land Clearing and about our Wonderful Drag Saw.

There is a Tractor Built Especially For California

It is the

Allwork KEROSENE TRACTOR

This is the powerful 14-28 horsepower tractor that has met with such a remarkable reception in sales. It is built low—only 55 inches high, 50 inches wide, weighs only 4,500 pounds, has five bearing crankshaft, is regularly equipped with fenders for closeup orchard work and is designed and made to burn kerosene. No special carburetor is required.

Experience in California, north, central and south, under varying soil and climatic conditions has proved that the ALLwork is the one successful kerosene burning tractor.

Dealers Will Find the ALLwork Tractor a Ready Seller

A year ago the ALLwork tractor was introduced into California and 66 were sold the first month. Today, one year later, in spite of the steel shortage 431 ALLwork tractors have been sold in California, a record that speaks for itself. Months of factory expert investigation in California finding out what would best meet California conditions have been rewarded with a steady flow of orders from farmers, ranchers and orchardists who wanted a low, powerful, kerosene burning tractor with a short turning radius AND TRACTION IN ALL SOILS.

And ALLwork tractors are so well made as to require very little service. Many owners have never made a call for service. The scientific design and quality of materials and workmanship are largely responsible. The ALLwork has Timken bearings, oil enclosed governor, swinging drawbar and three speeds forward and reverse.

Bankers know the ALLwork tractor is a good investment and will finance any responsible dealer or farmer.

Dealers have found the ALLwork just the tractor the western rancher has long been wanting. Backed by the unexcelled Railsback Service, ALLwork tractors make friends everywhere and invariably ALLwork owners buy additional ALLwork tractors when more power units are required.

Railsback Service is now extended to Northern California and Nevada. This means the highest degree of earnings with your tractor through thoroughly efficient Service. We have been appointed factory distributors for the ALLwork Kerosene tractor for Northern California and Nevada as well as Southern California.

Leading Lines of Implements With ALLwork Tractors

Farm and tractor implements of the latest design, which are supreme in their respective classes, are to be found in the display rooms of the L. M. Railsback Company. This firm has been extremely fortunate in having the opportunity to handle, and offer to its customers, tractors and implements and other types of farm equipment which are recognized for their quality and unusual serviceability.

Each of the lines which we carry offers the best in its particular sphere. This is proved by the service these implements are rendering on large and small farms throughout the country. They are noted for their substantial construction and all-around serviceability and economy and include the complete lines of Oliver and Killefer Implements. Visit our show rooms or write for further particulars.

The Los Angeles Livestock Show

By R. P. Royce

DURING the next eight days the gates of the third annual Los Angeles Livestock Show will swing wide to the public, and all who avail themselves of the opportunity (and every man, woman and child in Southern California should capitalize the opportunity) will find that a few days spent

about the judging rings and stalls of this most complete show can be definitely turned to their individual advantage.

The time has arrived in our agricultural development, especially in this southern part of California, when we must recognize the fact that, re-

(Continued on Page 448.)

EVENTS OF A GREAT WEEK

THE Los Angeles Livestock Show opens at Exposition Park today and continues nine days.

This show had its beginning in the Liberty Fair of 1918, held under the auspices of the sixth agricultural district of California, the first notable attempt to display locally pure bred farm animals.

Encouraged by the outcome of that show, public spirited citizens of the South organized the Los Angeles Livestock Show and put on a successful exhibition last year. The excellence and number of entries was a revelation.

This year the men and women backing the movement are giving more than \$100,000, their time and talent, in staging a comprehensive educational show which has for its main object the stimulation of the pure bred industry in the West.

Officers of the Livestock Show are: E. W. Murphy, president; Clinton E. Miller, first vice president; Harold H. Braly, second vice president; Albert M. Paul, treasurer; C. R. Thomas, secretary-manager. The directors are: J. C. Adams, Geo. R. Bentel, Fred H. Bixby, Harold Braly, George M. Brown, Harry Chandler, T. H. Dudley, R. L. English, Herman J. Hauser, Chas. H. Hill, P. D. Howse, H. A. Jastro, R. H. Jeffries, F. E. Lewis, Geo. Lichtenberger, Clinton E. Miller, E. W. Murphy, Albert M. Paul, Walter M. Ross, R. H. Whitten, Frank Wiggins, H. B. Woodhill.

Thirty boys' and girls' pig clubs have entered 76 swine. A special barn is provided for these exhibits and the display is in charge of farm advisers. Duroc-Jersey, Berkshire, Poland China and fat swine are represented.

The show will open on Saturday, October 2, with a great parade on Los Angeles streets, followed by nine full days of events both educating and diverting. Elaborate preparations are being made to stage the daily entertainment features which include running races, rodeo, horse show, fashion parades and surprise events going on every minute.

We cannot find place to mention all the great events, but we give outline which will be of value, especially to those who wish to attend the judging of the different types of cattle. There has been great pressure for additional space, and Manager Thomas has been building greater barns and making provision for every possible emergency. The entire list of exhibits and the livestock events will fill every minute of the time from 1:30 on Saturday of this week until the closing of the gates Sunday night, October 10.

The kennel show opens on Saturday and continues three days. The poultry, rabbit and pigeon show will open on Tuesday and continue until Sunday. The judging and feature events will occur as follows:

SATURDAY, OCTOBER 2

1:30 P. M.—Parade of some of the entries on Los Angeles streets. Band concert, Rodeo, Horse Racing and Amusements in front of grandstand.

SUNDAY, OCTOBER 3

9:00 A. M.—Barns and grounds open to public. 1:30 P. M.—Band Concert. Kennel Show. 2:30 P. M.—Grand Serpentine Parade of Livestock. 3:30 P. M.—Rodeo and amusements.

MONDAY, OCTOBER 4

9:00 A. M.—Judging Holstein Cattle, Milk Goats and Guernseys. 10:00 A. M.—Judging Percheron Horses. 1:30 P. M.—Judging American Saddle Horses. 2:00 P. M.—Judging Aberdeen-Angus Cattle, Tamworth and Yorkshire Swine, Horse Show. Amusements, Rodeo and Races.

TUESDAY, OCTOBER 5

9:00 A. M.—Judging Guernsey Cattle, Car Lots of Cattle and Poultry. 9:30 A. M.—Judging fat steers. 10:00 A. M.—Judging Duroc-Jersey Swine, Belgian Horses and Shorthorn Cattle. 1:30 P. M.—Judging Standard Bred Horses. Band Concert. 2:00 P. M.—Horse Show. 2:30 P. M.—Amusements, Rodeo and Races.

WEDNESDAY, OCTOBER 6

9:00 A. M.—Judging Poultry, Hereford Cattle and Poland China Hogs. 10:00 A. M.—Judging Shire Horses. 1:30 P. M.—Judging Jersey Cattle and Thoroughbred Horses, Band Concert. 2:00 P. M.—Horse Show, Amusements, Rodeo and Races. 3:00 P. M.—Auction Sale of Polled Hereford Cattle.

THURSDAY, OCTOBER 7

9:00 A. M.—Judging Berkshire Hogs and Ayrshire Cattle. 10:00 A. M.—Judging Clydesdale Horses, Jacks and Jennets, Poultry Show. California Cattle-men's Convention in Agricultural Building. 1:30 P. M.—Band Concert, Judging Arabian Horses. 2:00 P. M.—Horse Show. 2:30 P. M.—Amusements, Rodeo and Races. 3:00 P. M.—Auction Sale of Berkshire Hogs.

FRIDAY, OCTOBER 8

10:00 A. M.—Judging Hampshire Hogs, Unfinished Classes. Poultry Show. 1:00 P. M.—Judging Pig Club Stock. 1:30 P. M.—Band Concert. 2:00 P. M.—Horse Show. 2:30 P. M.—Auction Sale of Pig Club Hogs. Amusements, Rodeo and Races.

SATURDAY, OCTOBER 9

10:00 A. M.—Poultry Show. Judging Sheep. Special invitation to school children by owners of livestock to inspect and study same. 1:30 P. M.—Band Concert. 2:00 P. M.—Horse Show. 2:30 P. M.—Amusements, Rodeo and Races.

SUNDAY, OCTOBER 10

10:00 A. M.—All livestock on exhibition. 1:30 P. M.—Band Concert. Judging Shetland Ponies. Amusements, Rodeo and Races. 2:30 P. M.—Grand March of all Prize Winners.

Grand Champions at 1919 Los Angeles Livestock Show.

Agricultural News Notes of the Pacific Coast

Northern California

The rice harvest of Glenn County is now in full swing.

Arbuckle's almond fair, just closed, was the usual great success.

The Livermore farm center held its picnic at Cresta Blanca, September 19.

Modoc County is holding its fall fair at Cedarville, September 30 to October 3.

As the rice harvest progresses growers are finding themselves pressed for warehouse room.

The Humboldt County farm bureau will hold its annual meeting at Eureka, October 18.

Glenn County's fair closed today at Orland. There was an especially large exhibit of poultry.

Chico and Durham are planning to act together in planting the highway between them with shade trees.

Humboldt County meadows, pastures and ranges have been greatly benefited by early rains, especially near the coast.

The Solano County farm bureau will hold its first annual picnic on October 9 at Wolfskill's Grove, Manka's Corner, on October 9.

Growers are requested to allow their prunes to ripen thoroughly before bringing them to the farm bureau evaporator at Placerville.

W. S. Wilkinson of the university farm at Davis has been appointed technical assistant in work of the state department of agriculture.

Lake County has decided for the time being to organize no farm bureau of its own but to unite in work with Napa and Mendocino Counties.

The Hayward Review states that the bottom has dropped out of the tomato market because the small canners are not being given credit by the banks.

Instead of hauling rice to a stationary thrasher, some growers in Glenn County are using tractor to haul the thrasher over the field to the rice.

Grape growers of the Florin district of Sacramento County are faced by the same car shortage problem which is embarrassing grape growers generally.

The board of directors of the Poultry Producers of Central California has passed resolutions endorsing the National Farm Bureau and urging members to support all farm bureaus.

Owners of 35,000 acres of Butte County lands to the west of Gridley and Biggs and as far north as Richvale have petitioned the Butte County supervisors for the organization of a drainage district.

The Glenn County supervisors have authorized formation of Drainage District No. 1 of Glenn County to allow drainage of some 8,000 acres of rice across the Goodman lands near Butte City. The Goodman Estate recently brought injunction to restrain rice growers from draining over their land.

Placer County fruit shippers are protesting against statement that Placer County fruit is being received in Eastern markets poorly packed and in bad condition. They say that the small quantity of fruit arriving in poor condition was not properly iced by railroads and that Placer County is in the same boat with other sections in this respect.

Central California

Fresno district fair closed today, October 2.

The California Peach Growers is sending out notification that the entire crop under its control has been sold.

Tulare County fair, held last week at Tulare on its new \$35,000 fair grounds, reports most successful exhibit.

The hogs of Stanislaus County pure bred pig club sold at an average of \$15.50. They averaged in weight 181 pounds.

The olive crop in the Lindsay district of Tulare County is heavy and the quality unusually fine. Pickling will soon begin.

A large number of Indian pickers in the vineyards about Clovis, Fresno County, have been replaced by labor brought in from Mexico.

The farm bureau of Tulare County has decided to conduct a lumbering department on the plan followed by the Glenn County farm bureau.

Lindsay olive growers, members of the California Ripe Olive Association, met last week to discuss methods of handling the coming season's crop.

Sanger grape shippers report some improvement in the car situation; they are not getting a satisfactory service, but it is better than for some time past.

The sweet potato shipping season in the Turlock section has about reached its peak. Shipments so far have averaged the growers about four cents a pound.

A new million dollar terminal for bulk handling of grain has been finished at Oakland. It is stated that this plant is equipped for handling 200 cars of grain or rice a day.

The new plant of the California Prune and Apricot Growers at Visalia was dedicated on September 18. This plant cost \$100,000 and is said to be the largest devoted exclusively to the packing of prunes.

Tokay growers of the Lodi section have lost heavily because of car shortage. Growers who had hoped for \$90 per ton are now offering at \$75, for dehydration. The shortage of cars is said to be largely due to many of the cars being used by the wine grape growers.

Petition for the formation of the West Joaquin irrigation district will be presented to the Merced County supervisors at the October meeting. It was to have been presented at the August meeting but was held up by injunction obtained by Miller & Lux interests.

Suit has been filed at Visalia, Tulare County, asking that title to 1,000 acres of vineyard land near Visalia, valued at \$500,000, and Visalia property valued at \$35,000, revert to the people of California on the ground that the anti-alien land law was violated in their transfer to Japanese.

The California Ripe Olive Association has made arrangements with the California Products Corporation to deliver olives for an initial payment of \$100 per ton for olives grading 60 per cent pickling size. It is hoped the orchard run will bring about \$140. No new members will be received until next year.

Southern California

The Pasadena Flower Show will be held October 28, 29, 30.

San Diego County this year expects to ship 100 carloads of honey.

The total received for the past year's citrus crop will be about \$81,000,000.

Banning, Riverside County, has practically finished its almond harvest.

Coachella Valley cotton crop was materially injured by thunder shower.

On September 1 there were some 75,000 bags of Lima beans still in warehouses.

Coachella Valley has organized the 16th farm center to be formed in Riverside County.

Orange County farm bureau is proposing to take advantage of cooperative buying of supplies.

Orange County bean growers are harvesting and threshing. The crop is under average as to quantity.

Farm center meetings will be held in Los Angeles County at Downey, October 4; Glendora, 4; Hynes, 4.

The La Puente Valley, Los Angeles County, Walnut Growers formally opened their new packing house on September 18.

The cotton gin purchased by the Perris farm center of Riverside County has been opened and put in readiness for business.

Cotton picking in the Palo Verde Valley of Riverside County is in full swing, with labor shortage proving somewhat embarrassing.

At the recent annual meeting of the California Jersey Cattle Club at Sacramento J. E. Wherrell of Riverside was elected vice-president.

Walnut growers are discussing prices. It is thought a meeting will be held in Los Angeles on Saturday of this week and a sliding scale made.

The Southern California Fair at Riverside, October 13 to 19, will have many attractive exhibits from beekeepers of the county and surrounding territory.

More than 75 persons attended the recent meeting of the Alvord center of the Riverside County farm bureau. President Wherrell of the county farm bureau was one of the principal speakers.

Imperial Valley cotton growers are being advanced \$100 per bale on short staple and \$150 on long staple. This will enable them to hold the crop until more satisfactory price arrangement is made.

Citrus growers who have been endeavoring to buy bean straw for fertilization purposes find inability to get amount desired because of shortage of baling wire. The price is ranging around \$18 per ton.

Lima bean people are to meet this week in Oxnard and discuss the marketing situation. The market is far from satisfactory. There is about a 20 car carryover from last year. The opening price may not be more than ten cents.

Records of production commenced on September 1 in the California Dairy Cow Competition being conducted by the college of agriculture. Entries, however, may be made up to April 1, 1921. Awards will be made on records of production for ten consecutive months prior to February 1, 1922.

The Coast and General

Arizona cotton growers are generally holding their cotton for better prices.

An agricultural department has been installed in the schools of Rainier, Oregon.

A series of beef cattle sales has been planned for Medford, Oregon. The first was held on September 15.

The farm bureau of Washoe County, Nevada, has formed a marketing department and will employ a manager.

The chamber of commerce of Corning, Tehama County, is also trying to find some solution of the housing problem.

E. W. Hudson, a prominent Arizona farmer, has been appointed a member of the board of regents of the Arizona state university.

The Oregon state fair board has devoted \$300 to prizes in the boys and girls club stock judging contests at the state fair at Salem.

There are 4,547 Japanese living in Oregon, according to report of the state labor commissioner. They own property valued at \$300,000.

The U. S. department of commerce estimates that China shipped to the United States nearly \$2,000,000 worth of walnuts in the 11 months ending May, 1920.

The Hood River Apple Growers Association of Oregon expects to ship out about 150 carloads of pears. The majority are Bartletts, with d'Anjous next in quantity.

The farm bureau of Washoe County, Nevada, is asking the state quarantine inspector to open negotiations with California to secure modification of quarantine against hay due to appearance of alfalfa weevil.

Seed dealers in the Salt River Valley of Arizona state that the demand for garden seeds this fall is coming earlier and in a volume which indicates that there is a healthy return to the home garden plan.

An attempt is being made to ask the interstate commerce commission to consider the matter of lower rates for certain commodities shipped into the Salt River Valley of Arizona. It is claimed that rates now in effect are discriminatory.

President Stevens of the Arizona American-Egyptian Cotton Growers Association has returned from the national cotton conference at Montgomery, Alabama, and announces that cotton growers all over the country are going to stick together to secure fair prices.

The second annual Cotton Carnival is to be held at Mesa, Arizona, this year, October 25 to 30. Last season, which was the first event of this kind, was more or less of a local affair. Plans this year are to make it the big gala occasion for all cotton growers of the state.

Prof. F. C. Mason, now in Egypt, writes to a friend in Arizona that he has just packed 2,500 of the choicest Egyptian date palm offshoots, which are being shipped to California and Arizona. He states that 300 of these offshoots are of the much prized Hazani variety. Prof. Mason is to continue on into the Persian Gulf country and there make other selections and study date growing and packing methods.

National Tractor Show of the West

A Great Event for Farmer and Dealer With Notes by Cultivator Staff

MAN'S arm is a whole lot longer and stronger than in the days of the crooked stick plow or in the days of the old time moldboard, whether it was of cast iron or tempered steel. There are today slight differences in curvature, slight variations in manner of draft or making the hitch, which give greater power over the forces of nature. In fact, the greatest lesson at the National Tractor Show of the West, just ended at Verdugo Woodlands, was in the working out of details.

Tractors looked much as they did a year or five years ago. There were no new nor striking types, but there were striking changes in tractor drawn implements. When the tractor came it attached itself to the horse drawn vehicles and its success was sufficient to continue drawing them, but it soon was apparent that special implements, special hitches and power lifts were necessary. Therein were the great advances manifest in this show. This has been brought about largely, we believe, by the insistent demand of the tractor people that an implement must be built to meet the particular needs of their tractors.

We asked one implement maker as to whether this use of more complicated attachments did not necessitate more technical education on the part of the farmer who used them, and he answered, "Quite the reverse. Note the tractor hitch. If the draft does not give 100 per cent efficient service a slight change in the location of this bolt so regulates it that no other bolt need be touched in order to secure perfect results. The farmer of today must be one of a reasonable degree of intelligence. Any new method worked out cannot be said to be absolutely 'fool proof,' yet these inventions simplify the farmer's problems."

Another tractor had a series of lugs for attaching to the smooth rim of the wheel which may have just left the best of improved highways without injury to the surface. These lugs, it was guaranteed, could be fitted to both drive wheels in five minutes and give perfect traction in soft ground of field or orchard.

The best of it is that the real users of these implements and of farm power were at the show gathering in these lessons. While it was a show and not a demonstration, yet the demonstrators were with each machine and many machines were there with parts showing details of transmission or other internal working part. In a sense it was the demonstration with the personal touch which is not possible with the great field demonstration.

Financially it was a complete success. Spectacular features were eliminated; utility only considered; yet there were 6,000 to 7,000 in daily attendance.

As another of the Cultivator staff saw the show:

By J. H. Yetter

It is certain that everyone who attended the National Tractor and Imple-

they can sell several carloads at this time so much as for some real, dependable man of service who can take care of his customers' needs in service in his immediate territory. Individuals who may be watching the trend of events for business openings would do well to familiarize themselves with the tractor industry and its future. Verily the more tractors that are made, the more seem to be sold and

GUY H. HALL

A special tribute is due Guy H. Hall, a five times successful manager of tractor shows and demonstrations, for his successful work in handling both affairs and men to make the National Tractor and Implement Show of the West the splendid success that it was. Mr. Hall is a diplomat, a gentleman who sees things in their larger aspects and a go-getter. May he come to California to reside permanently.

ment Show went away with a new inspiration as to the great future of the tractor industry. One could not but be impressed with the wonderful progress made each year, and especially during the past five years.

When the vast amount of money that is invested in the tractor industry is considered and one comes in contact with the engineers and the other big men behind the various organizations, one instinctively feels the broad, solid foundation upon which it is founded. This show, of all the shows and demonstrations that have been held in Los Angeles, made tractor enthusiasts or "bugs," to use a slang phrase. Talk with almost any farmer there and he can give you the special technical difference between tractors.

The country has been sold, to a certain degree, upon tractors for some time, depending upon the territory and needs of the farmer. It is safe to say that the National Tractor and Implement Show increased the percentage of people, or territory, thoroughly sold on the utility and necessity of the tractors, more than any show ever held here. It gave thousands who attended it a greater vision of a tractor on every farm and the right tractor doing the particular work required of it.

More dealers are in demand. The men and firms manufacturing tractors are not looking for some one to whom

used. The tractor dealer is one of the most important men in every community. Every tractor sold increases the productivity of the country.

If there was any hesitancy or uncertainty as to farm loans on tractors, it was not noticed at the tractor show. It is certain that more deals were closed for immediate delivery of tractors than was anticipated and more than at previous tractor demonstrations. Money was plentiful. Dealers say the tractor business is so essential that bankers realize their necessity and there will be money to loan on tractors long after money tightens up on other non-essential lines. It depends a good deal upon the tractor and the farmer and the dealer. Tractors manufactured by concerns of established financial responsibility and of known reliability, sold by dealers who are dependable, to farmers who need them, seem to be moving from factory to farm without delay.

It is reported that tractor distributors are advised to report to the federal reserve bank any refusal on the part of any bank to extend reasonable credit to any responsible farmer who may desire to buy a tractor.

* * *

TRACTOR NOTES

"Perfectly satisfied" was the only verdict which could be secured from President Rainey in an attempted interview. Every other exhibitor on the

grounds expressed belief that greater advance had been made in power farming with improved implements through this National Tractor Show of the West than any other power and implement event.

* * *

Manager Guy Hall was likewise too busy for an interview. The look on his face, however, expressed that "perfectly satisfied" condition of President Rainey.

* * *

The grounds with the running stream—it was real water—made a perfect setting. The comfort of the attendants was looked to. The eating possibilities were fair; there was abundance of room for parking; the weather was perfect.

* * *

Both tractor and implement people were frankly out for doing business. Everyone of whom we inquired remarked: "Yes, we have made sales for immediate delivery. Still better, however, are the large number of prospects for future business."

* * *

Harry Lamster of the William L. Hughson Co. said: "The great feature of this exhibit is the bringing together in an educational way of the tractor and the implement which is fitted to the tractor. Our firm demanded for the Fordson tractor implements which would meet its requirements and implements which could be operated by the tractor driver, in other words, a one-man outfit. The implement maker said it couldn't be done, but the same implement maker turned in and did it just the same." And Manager Nerney of the Hughson Co. made such a complete showing of tractor and adapted implements that Mr. Lamster's statement was verified.

* * *

The Motors Equipment and Tractor Co. made fine showing of novel interchangeable tractor and corn, cotton or beet cultivator. This was in the Toro. As a beet cultivator this implement would handle four rows or two rows in corn and cotton. The change from the cultivator to the regular tractor type required but a short time.

* * *

The H. J. Ruddell Co. showed Fageol trucks and tractors. The few trucks which were exhibited at the show received sufficient attention to justify their exhibit. The truck people apparently failed to grasp the importance of the occasion for the farmer is proving a greater user of trucks than was dreamed possible five years ago. The Fageol folks also made particular point of the adaptability of the Fageol tractor in bean and beet fields. The Fageol is a California invention and meets California conditions.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

EDITORIALETTES

The procession of fairs, shows and nice things continues. The National Tractor Show of the West ended last Saturday and this issue bears evidence to its success. Also last week there was the Kings County Fair at Hanford, and we would like to tell of its attractions and benefits in an article written by J. P. Bennett. This, is however necessarily held over until next week, the issue of the 9th. Then there was the Ventura County Fair, and this week are being held the Glenn County Fair at Orland, the Fresno District Fair at Fresno, the Shasta County Fair at Redding, and today begins the Los Angeles Livestock Show with a gathering of pure bred such as is seldom seen, and on Tuesday begin Siskiyou County fair and Orange County Fair, then the Southern California at Riverside on October 13.

Other fairs coming are Northern Arizona, Kern County Cotton Festival, Mendocino Apple Show, and finally the Arizona State Fair in the middle of November, also the Pacific International at Portland. Never were there such opportunities for the Southwest to gather information at first hand.

The National Tractor Show was completely successful. One Eastern

attendant thought perhaps the gate receipts were not so large as in some of the great tractor events of the Middle West. Perhaps. We are not jealous of gate receipts. We are, however, highly gratified at the apparent interest at this show which was manifested by farmers who were there to gather information. They saw tractors from all sections of the country, saw the implements which are fitted to those tractors and went home better informed than ever before on farm mechanics and farm power.

Manager Thomas of the Los Angeles Livestock Show is too busy to give an interview. But new barns have been built to fill all available space and every stall is engaged. The Cultivator staff is busily sharpening pencils and wiping the dust from the lenses ready for a full week.

Secretary Van Pelt of Riverside phones in that former years successful events are already eclipsed as to entries and interest in the Southern California Fair to be opened two weeks later. It appears there will be an especially strong showing of Jerseys and Holsteins.

Thomas Forsyth Hunt, dean of the California college of agriculture, has been appointed by President Wilson as a member of the permanent com-

golden poppies that they may not see the snowdrifts in the highways. However, if there are no snowdrifts the Cultivator will take the credit for having secured an abatement of the nuisance.

The forest service reports that "Thirty-three per cent of the 196 forest fires discovered and reported by the ninth aero squadron operating out of Mather field were accurately located." The accurate location aided in fire control. It is very probable that the army service is greatly benefited by the drill which the fliers are securing.

The recent bomb outrage in the city of New York, in which more than 30 people's lives were snuffed out, has been definitely determined to be the result of a diabolical plot, doubtless planned by Bolshevik type of conspirators, in any case, caused by wrong thinking on the part of those who feel that the thrift which leads to success should be punished and all property turned over to those who are unwilling through self denial to store for their own future use. Unfortunately, events of the past months have shown that the lower type of vicious law breakers are not the only ones who hold mistaken ideas as to the property rights and the civil rights of the people. There will doubtless be

SAWMILLS AND FOOLS

It took more than 3,000 years to make some of the oldest of the sequoias, trees that are still standing in perfect strength and beauty, waving and singing in the mighty forests of the Sierra. Through all the eventful centuries since Christ's time, and long before that, God had cared for these trees, saved them from drouth, disease, avalanches and a thousand storms; but He cannot save them from sawmills and fools; this is left to the American people.—John Muir.

mittee of the International Institute of Agriculture at Rome, Italy. This will fill the place made vacant by the death of David Lubin, founder of the institute, some months ago. The institute was the result of a dream of a Californian. The dream was considered so impractical as to be unworthy of the support of many Californians and many other Americans, but ultimately the ear of the King of Italy was reached and he financed and made possible the institute. It has resulted in the gathering of a fund of information from the wheat and corn fields of the earth so that the food producers of all nations have been greatly benefited. Since the death of Mr. Lubin America has had no representative in the organization. This appointment means that America will continue to be represented by a Californian. Every nation of importance now affiliates with the institute. We are not informed as to Dean Hunt's acceptance nor as to the effect it will have on his connection with the College of Agriculture, but Mr. Lubin's time was all required in Rome.

We have communication from the National Automobile Chamber of Commerce, urging special campaign with highway officials and those who have power to make appropriations in order that there may be secured for this state proper removal of snow from the highways during the coming winter season. "It is all important that we take active steps to point out to the authorities the need for looking after this vital matter at once." We will defer the matter until January, when we fear we will find our authorities so busily engaged in eating strawberries and cream and rubbernecking at

closer scrutiny of some educational institutions which have harbored parlor Bolsheviks.

We understand there is a desire on the part of certain farm papers to become the official organ of the state farm bureau, or perhaps more correctly to make the state farm bureau an official booster for the papers in question. The Cultivator is not a candidate for the position. It appreciates the privilege of supporting so great a movement as that of the farm bureau. The farm bureau accomplished much during the war; we are not certain but it is accomplishing more since through its aid in directing agricultural practice, marketing of products and in creating a more truly cooperative spirit. This support will continue, regardless of the fact that this paper will not seek to be made the official organ. The field of an official organ is more or less restricted and for well up toward half a century the Cultivator has been endeavoring to cover the agricultural and horticultural field of the state and has never failed to render fullest support to the principle and practice of cooperation while it remains true cooperation.

Some members of the farm bureau are opposed to a narrowing of farm bureau influence. They feel that the bureau should remain truly cooperative in spirit, and that that spirit is not increased by centralizing all the power.

Then there is the house organ. No section of the Union has so many and such large house organs or publications. California is a land of specialization, and this has seemed to en-

courage their establishment. The cost of these publications is borne by the producers or, in some cases, by the taxpayers, and some of the papers have been pushed to the point where they prove an unfair competition for two of the greatest friends of these cooperative movements. These are the farm paper and the local, or home, newspaper. We say "unfair" for the reason that the established farm or local paper of necessity must cover the cost of production or quit business. The house organ, being assured of support, regardless of its own immediate return, may continue indefinitely and bear heavy losses which are assumed by overhead expense of a large and strong organization.

Another case in point is that of a publication receiving endorsement, and doubtless financial support, from the college of agriculture. This paper was started as the organ of agricultural college men but at one time became a strong magazine with specially written articles by professors of the college, which service is not at the command of privately owned papers. That paper ceased to have any of the characteristics of a college men's paper and entered the regular farm paper field, but in a style typographically and as to paper stock impossible to papers not supported by taxes or other sources than income of the paper. The weekly cost of producing a paper similar to the Cultivator and with circulation reaching every county of the state requires four sizable figures to express, hence closest and most intensive business management is required in this and all other publications of its class. Competition with all the taxpayers of California is difficult.

The farm bureau is and must continue to be the expression of the wishes and supporter of the interests of its members. The continuance of control by the membership will not be facilitated by an official "molder of opinion" directed entirely from the centralized authority.

Again, as to the influence on public opinion. The recent fight on the raisin growers, had it depended entirely on its own publications, might have ended differently had not public opinion been appealed to by the loyal stand taken by practically every paper in California. In fact, that fight would have been well advanced, and perhaps ended disastrously, had the monthly date of publication been awaited to pass information to its own members and to the public.

Do not understand us to suggest that there is no need for the house organ or for a news sheet which will carry to the members a more intimate line of information than would be justified in the general public print. We doubt not such publication is imperative for accomplishing best results, but the ambition to erect a great newspaper property at the expense of the truest friends of cooperation is unjust and, from our standpoint, appears to be unwise.

The suit of the department of justice against the Associated Raisin Company has ended. Or if it hasn't ended it is hesitating or has halted or something. "Nobody knows nothin'" but presumably it has been found that changes already made, and in the making for the past few months, place the association technically, as well as in spirit, free of trust taint

Copyright 1920, by The Goodyear Tire & Rubber Co.

"Soon after I got my truck I made a big improvement by changing quickly to Goodyear Cord Tires. The pneumatics save time, fuel, repairs and shrinkage in livestock—they have increased my hauling radius by 35 miles and go anywhere on the farm. I figure the one truck equal to six teams on my place. Motorization offsets the labor shortage and pneumatics help the farmer to motorize properly."—Frank B. Williams, General Farmer, Cedar Bluffs, Nebraska

MANY a resourceful farmer, like this one, now saves labor, time and money by doing his farm hauling and market hauling on Goodyear Cord Tires.

He hauls steadily through plowed fields, barnyard mud, sand trails and melting snow because these tractive pneumatics grip firmly as they go.

He hauls eggs, fresh vegetables, delicate fruit and shrinkable livestock with utmost safety because these are cushioned properly on the big Goodyear Cord Tires.

He hauls quickly to pumping, grinding, shelling,

harvesting and wood-cutting machinery because of the easy-rolling qualities of these helpful pneumatics.

Developed with the manufacturing care that protects our good name, the hardy strength of their Goodyear construction is repeatedly expressed in mileages of exceptional length.

Detailed information, concerning pneumatic-tired farm trucks and general farm motorization, will be sent promptly on request by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

GOODYEAR

CORD TIRES

MOLINE

The Universal Farm Power Plant

Does It All

It is the correct farm power unit, doing all belt and field work, *including cultivating*, with one man.

3-2 Plow Capacity

3 plows for ordinary conditions which prevail in most sections of the country.

2 plows for extreme conditions and unfavorable seasons.

The Moline is unique in the tractor field—made so by our patent protection.

If desired you can use the "drag behind" or horse drawn implements you now have with the Moline the same as with other types of tractors

An average elimination of 4.7 horses per farm and a total average saving of \$1447.58 per year is reported by Moline Tractor performance records received to date—all made with the 2-bottom plow. Here are three representative reports:

Name and Address	No. horses displaced by tractor	Value of labor saved	Saved by the Moline Tractor
(Name on request) Pulaski, Tenn.	7	\$150.00	\$1614.00 *
(Name on request) Spencer, Iowa	5	800.00	1999.35 *
(Name on request) Ossian, Ind.	4	540.00	1577.50 *

* This is clear profit for the year over the cost of fuel, oil, repairs, depreciation and interest on the investment.

We will be glad to give anyone interested the opportunity to personally inspect these records.

At the National Tractor Show of the West

A Most Remarkable Showing of Implements and Farm Power
Under the Trees of Beautiful Verdugo Woodlands

A Look In at the National Tractor Show of the West, held in Verdugo Woodlands, Glendale.

1, View of automobile parking grounds. 2, Glimpse of L. M. Railsback Co. exhibit of Oliver tools. 3, Mr. Given More beside the Kardell tractor. 4, Standard Oil booth. 5, Pomona Air Cleaners, shown by the Vortex Mfg. Co. 6, New Yuba 15-25, one of four models shown. 7, Bates Steel Mule; part of exhibit of F. T. Briles. 8, Corner of Allis Chalmers exhibit. 9, Hart-Parr bootstrap test feature of Southern Border Motor Co. booth at the show. 10, Close up of the large Killefer subsoiler. 11, Fitch Four Drive Tractor. 12, First appearance of the new Stockton Sure Grip tractor. 13, View of the exhibit of Beeman tractors, Toro tractors and motor cultivators shown by Motors Equipment and Tractor Co., Inc. 14, J. I. Case tractor making short turn. 15, H. L. Marsh of the Farwest Sales Co. and the Midwest Utilitor Tractor.

TRACTOR NOTES

(Continued from Page 429.)

The Avery folks had exhibit of four of their favorite sizes, the 40-80, 14-28, 12-25 and 7-14, also the Avery motor cultivator, disks, plows, listers, etc. The lister attracted attention especially of cotton growers of the Imperial and San Joaquin Valleys.

Gregory and Sons made striking showing of the careful work of the manufacturer of the Trundaar. Trundaar transmission, especially, was made plain with cover plate removed and the dual worm drive transmission shown. "Every shaft is made from nickel alloy steel, heat treated and ground and mounted with either Timken or Hyatt bearings. Wm. Gregory showed up occasionally, but the principal burden was on the shoulders of the boys.

The Garden tractor maintains it is here to stay, and increasing interest

on the part of inquirers indicates the claim is being made good.

The Oldsmar five horse power 1,100 pound machine is adapted to light work in the orchard but more particularly for gardens and truck farming. It is also adapted to clean-up work on larger farms where big tractors are used.

"Schmeiser's way makes farming pay" and Schmeiser showed his way in the power lift graders and scrapers, portable automatic derricks and other labor savers.

Some dealers feel that some day there will be a change in expressing the rating or power of a tractor. At present we give rating at pulley and drawbar in horsepower. The Tractometer Co. exhibited and demonstrated workings of the Tractometer which shows actual number of pounds pull at the drawbar. These are built in

different sizes with capacity from 1,000 pounds maximum to 12,000 pounds.

"Deep Tillage" is the slogan of the Killefers. They exhibited some subsoilers and deep tillage implements which were wonders. Beside the deep working sub-soiler with its "gopher" drain appliance they made showing of the tractor chisel, the "chisel" being of the same form as the sub-soiler. These on the nine standards of the one implement 12 inches apart make a total cut of eight feet. Of course, only the largest type of tractor could handle such an implement. In fact, the Killefer folks have never made any use of the slogan "Light Draft"; they are pioneers in the field of plenty of power to do the work required in California soil.

N. B. Nelson, vice president of the Minneapolis Steel & Machinery Co., manufacturers of the Twin City Tractor, spent the week at the tractor

show. He is on a big trip, covering the entire western portion of the United States, and was pleased with the interest at the tractor show. Two Twin City tractors were exhibited by the Frank O. Renstrom Co., but one special tractor, made specially for orchard work in this section, with lower wheels and special fenders, did not arrive in time for the exhibit, but will be shown soon by the Renstrom Co. at 1100 South Hope Street, Los Angeles. Thos. McAlpine was in charge of the exhibit.

The Gray tractor was one of the new entries at the National Tractor and Implement Show and, as it was a new comer in this territory, the factory representative secured ground near the Verdugo Woodlands after the show and put on a continuous plowing demonstration with great credit to the tractor. While the Gray tractor is new on the Pacific Coast it is one of the old timers and stand-bys in the wheat and corn belt, as well as in Canada and foreign countries. It is a powerful drum type tractor with special hitches enabling the operator to successfully operate large tillage tools at both sides and in the rear of the tractor. In the wheat belt, Gray tractor owners disk and harrow 80 acres of land in one day with one machine at one operation. While the Gray is too large for citrus groves it will give a splendid account of itself on the wheat, barley, alfalfa, rice and cotton ranches of California and other Western states. Mr. Gray, president of the company and one of the big men in the tractor industry in the United States, also Mr. Dodge, his sales manager, and Mr. Hughes were at the show and are making distributor and dealer connections in the West on this trip.

The A. B. Johnson Company displayed both wheel type and tracklayer type of tractor at the National Show, the Stockton Sure Grip being shown for the first time. Mr. Johnson says that under the varying soil conditions of California both types of tractors have their place, and for this reason the Stockton factory has developed the Sure Grip. There is practically no difference, except in the drive, between the new model and the already well known Stockton wheel tractor. The Farwest Sales Co. has taken the Southern California distribution of this line in addition to the Midwest Utilitor garden tractor. The A. B. Johnson Co., with headquarters at Sacramento, is exclusive factory distributor for the Stockton.

The Tractor Association banquet was held Wednesday evening in the Alexandria Grill. Three hundred were present, including many factory representatives. The banqueters were in fine spirits (not the more than two per cent kind, however) over the splendid success of the show.

Willys Light was a source of much interest and the Joy-Reams Company, southern distributors, showed the farm lighting plant to splendid advantage. This company also distributes for the Sharples Separator Company. An exhibit will be made at the Riverside fair and the Los Angeles Livestock Exposition.

The L. M. Railsback Company was one of the large space users and, as usual, was there with the service. All-work tractors, one year in California, now number over 400 sold, and the Railsback Company is distributor for both Northern and Southern California, carrying locally Oliver and Killefer implements.

The city of Glendale and its boosters took splendid care of the visitors and came up entirely to Glendale's reputation for being the fastest growing city. It will get more big events, due to the fact that its citizens deliver the goods.

Personal and Otherwise at Tractor Show

1. Gray tractor shown for the first time at any Southern California tractor show.
2. The Trundaar tractor shown by Wm. Gregory and Sons, pulling 6,000 pounds on the tractometer.
3. Part of the exclusive power farming exhibit of Wm. L. Hughson Fordson tractor and tools.
4. Twin City Kerosene tractor.
5. Three members of the firm of L. M. Railsback Co. in their exhibit of Oliver implements: R. C. Holsted, Alex McCloskey, and L. M. Railsback. (Engraving on opposite page.)

In 4 Trips Across America Essex 4 Times Breaks Record

*San Francisco to New York---3347 Miles
In 4 Days, 14 Hours, 43 Minutes*

First Essex

San Francisco to New York
—4 days, 14 hours, 43 min.
Lowers Record 12 hours, 48 min.

Second Essex

New York to San Francisco
—4 days, 19 hours, 17 min.
Lowers Record 22 hours, 13 min.

Third Essex

San Francisco to New York—4 days,
21 hours, 56 min.
Lowers Record by 5 hours, 35 minutes.

Fourth Essex

New York to San Francisco—5 days,
6 hours, 13 min.
This car took a longer route and also
ran into storms. Yet it broke the
former record by 11 hours, 19 minutes.

A Proof of Reliability Never Equalled

The first test of an automobile carrying U. S. Mail across the American continent was made with the light weight, moderate priced Essex. And it resulted in establishing the Essex as holder of the trans-continental record both ways.

The performance—while of momentous importance in the world of speed and automobile sportsmanship—is of greater value to the motorist. For it removes all doubt about the reliability of light weight in the most difficult and hardest road service.

Also Holds These Noted Records

Many other unmatched Essex records forecast its ability to break the trans-continental records at will. For instance it holds the official 50-hour endurance record of 3037 miles in 50 hours. It holds the 24-hour dirt track mark of 1261 miles, made by an owner-car, which had previously seen over 12,000 miles service. And it holds the world's 24-hour road mark of 1061 miles, made over Iowa country highways.

Yet these records are significant only because they show the endurance and reliability of every Essex car. They speak for the ability of any Essex to duplicate these feats.

Essex Motors, Detroit, Michigan

A New Log Saw

Cuts Faster, Costs Less, Makes More Money for Users and Works While You Rest

A new improved power log saw, now being offered, outdoes all other log saws in cutting wood quickly and at little cost. A new 4-cycle, high power motor equipped with Oscillating Magneto—no batteries to fail you—makes the saw bite through logs faster than other log saws. It finishes its cut and is ready for another before the ordinary saw is well started. This log saw—the Ottawa—has a specially designed friction clutch, controlled by a lever, which starts and stops the saw without stopping the engine. Others have imitated, but no other power log saw has this improvement just like the Ottawa. The Ottawa Log Saw sells for less money than any power saw of anything like its size.

Patent Applied For
The Improved Model, 4-H.P. Ottawa Log Saw

One man wheels this outfit from cut to cut and log to log like a barrow. Separate attachments cut down trees and cut up branches. Extra power lets the engine do heavy work of all kinds. Owners of the Ottawa Log Saw laugh at coal shortages and are making big money with ease, the machine doing the work. 35 to 50 cords cut any day, rainy or dry, by one man, are normal figures. And wood is approaching \$20 a cord! The Ottawa is compact, simple and durable. It sells for cash or easy payments and is guaranteed. If you have wood to cut the Ottawa Log Saw will be the most satisfactory machine you've ever owned. We suggest that you write the Ottawa Mfg. Co., 2744 Wood St., Ottawa, Kas., for their complete new illustrated book and prices, sent free to all readers of this paper.

Protecting Standards

Numbers of men in the Holt plant spend their whole time looking for trouble—yet they are the best friends of workmen, Company and "Caterpillar" Tractor owners alike, for they help to maintain the high merit of the Holt product.

As the result of a relentless inspection, they reject material and parts that do not conform to the exacting Holt standards. The "Caterpillar" purchaser reaps the benefit in lessened costs, longer tractor life.

"Accuracy"—the booklet story of Holt inspection—tells all about it.

Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards 6 times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand and Fleur de Soufre, packed in double

sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

VENTILATED Sublimed Sulphur—Impalpable Powder, 100% pure, in double sacks, for Dry Dusting and making Paste Sulphurs.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men \$5 per day for making the solution and applying same.

To create additional available plant food and prevent smut in grain, drill into the soil 110 pounds per acre of TORO BRAND SPECIALLY PREPARED AGRICULTURAL SULPHUR—or our DIAMOND "S" BRAND REFINED POWDERED SULPHUR. This soil treatment has increased various crops up to 500%. Send for Circulars No. 6, 7 and 8.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur, Mixtures, etc.

Carried in stock and mixed to order.

"RED TOP" STEEL FENCE POSTS

America's Foremost Fence Post

The "Red Top" Steel Fence Posts have earned the right to be known as the world's foremost fence post.

Millions of these permanent steel fence posts have been installed on Government property, along the right-of-ways of leading railroads and on thousands of America's best farms.

The "Red Top" has answered the every requirement of the three general classes of post users. It has given continuous satisfactory service under most adverse conditions and in each case it has made good.

Natural enough that today it is recognized as the world's standard fence post.

Know this superior steel fence post. Identify it by the "RED TOP."

"Red Top" Fence Posts drive like a stake—Anchor like a rock—no concrete used for line posts.

Which Rope Gets Most Wear?

The one pulling straight, or the one pulling through many turns?

Every time you bend a rope there's friction in the strands. Same is true of the track on a crawler type tractor. Every unnecessary bend puts wear at the joints and strain on the links.

That is why we build the Best track in *one piece* which oscillates as a unit. The only turns in the chain of track links are over the ends. The track simply bridges the ground depressions instead of attempting to follow the ground by bending. A longer track life is the result.

There's a reason for every feature built into the Best. They have been worked out by long years of tractor experience. Among these, besides the one-piece track feature, are—simple, powerful, long stroke, slow speed, valve-in-the-head engine built in our own plant—36 Hyatt and Timken bearings—absence of belts and chains—independently operated tracks which make easy handling and enables tractor to turn in its own length—three-point suspension which takes jolts and twists off motor and transmission—greaseless, non-friction rocker joint for track links—scientific selection of materials—careful, painstaking workmanship—complete housing of working parts.

These features are responsible for the remarkable success of the Best Tracklayer Tractor, a success covering many years.

If interested in tractors and tractor history, send for our complete catalog.

Citrus Fruits of Shasta County

By Ernest Branton

IN the courthouse grounds at Redding, Shasta County, the writer critically examined several trees each of orange, lemon and pomelo. All were bearing fruits of good size and number and except the lemons all trees were in as apparent good health as those in the famous citrus belts. But they are in unfavorable situations so far as culture is concerned, being planted in the lawn. The nature of the surface soil would indicate that too much water, necessary for the lawn, remains with the lemons by reason of poor drainage. It is both a surprise and a pleasure to find citrus

best of vigor and summer cover crops or alfalfa grown between the trees to keep the soil temperature lower. Then with frequent irrigations throughout the summer to balance the atmospheric demand for heavy transpiration of the foliage this difficulty might be overcome. Stimulation at time of blossoming with nitrate of soda or other quick acting fertilizer would aid the trees in setting fruit, for at that period the trees are functioning most heavily and need assistance. Improved soil practice would also aid. To see these large, vigorous trees apparently helpless in overcoming climatic and other natural limitations makes a southern citrus grower wish to stay in Shasta County for a few years to experiment in producing commercial oranges in a really northern citrus belt.

Horticultural Outlook

Farmers of Shasta County are rejoicing over present freedom from smelter fumes, and the outlook is bright. For years the favored fruit sections had their development retarded and in some cases entirely stopped by these destructive fumes which floated over the fair valleys on the cool, damp morning air naturally beneficial to both animal and vegetable life. Even the native forests were killed and the baneful influence was both seen and felt for a distance of 35 miles from the smelters.

Early fruits, particularly cherries and almonds, were quickly overcome and oaks and pines were blasted as by forest fire. The mulberry and the fig seemed best able to withstand this suffocating atmosphere, but all vegetation was adversely affected and successful agriculture impossible. Then came scientific investigation and experimentation to overcome this deterrent to fruitfulness of fertile lands, for litigation was costly and both miners and farmers were under heavy annual expense due to warring over blighting of fruit crops or destruction of orchards. First the scientist saved the zinc that was wasting through the chimney tops and now he is recovering nearly all the sulphuric acid which in times past had slowly eaten away both wood and iron in the country surrounding. Now Happy Valley is proving true to her name, and peace and prosperity reigns in favored sections fast becoming famous for fruits second to none. During 1919 Shasta County produced more than 1,500 tons of dried prunes, 125 tons of green peaches, 250 tons of dried peaches, much of other fruits. The output for 1920 will be considerably larger in the old orchards and each year younger ones come into bearing. The outlook is both bright and satisfying.

Tropic Trees Far North

Pomelo on court house grounds, Redding, Shasta County, and the man who planted it, George Albro. Fruiting citrus trees and five species of palms proclaim this a semi-tropic clime.

trees thriving so far north, at the very head, or beginning, of the great Sacramento Valley.

This demonstration was so interesting that a trip was made down into Happy Valley, where near Olinda were found some large, vigorous orange trees that have passed through many years unscathed by heat or frost. Close inquiry developed that the reason why commercial acreage has not been attempted is because the trees do not yield sufficiently. Here the summers are quite warm, and this alone would affect the crop adversely unless trees were given the same treatment applied in the hotter parts of the central and southern citrus belts. Trees must be kept in the

Kern County Cotton

Cotton Care and Culture

The land is thoroughly prepared in early spring by plowing, irrigating and harrowing, and planted about April 1. When plants come up they are irrigated five times during the season. Mr. Phillips says three floodings would suffice instead of the five furrow irrigations. The rows are 48 inches apart and the plants about eight inches in the row. Cultivation follows each irrigation until plants are so large the side branches would be broken, but irrigation still continues. Picking commences late in September.

There was no labor shortage last year and none is anticipated this picking season. Pickers are paid by the hundred pounds, two cents for short staple and four cents for long staple. In explanation of the difference in prices, Pima has but three locks of cotton while Durango and other short staples have four or five locks and all is picked at one pull. Long staple has also to be picked cleaner or more free from the dried leaves. If the leaves do not become dry naturally they are killed by the lightest early frosts. Only local seed was sown last and this year and same will be true for 1921. The best price

EVERYTHING about the Kern County chamber of commerce is hustle and bustle for Secretary Johnson is selecting and collecting exhibits for the coming "Kern County Cotton Carnival" at Bakersfield. The county grew 15,000 acres of cotton this year and expects to double the area for 1921. The value of the 1920 crop was \$4,000,000. Because of the growing importance of this crop the writer visited several cotton sections, but looked about for a grower also experienced in other cotton states.

J. T. Phillips came from Texas after long years of cotton growing in that state and purchased the ranch east of Bakersfield, then owned by Geo. H. Peters, the well known potato grower. After 35 years experience in cotton Mr. Phillips chose this heavy black fertile soil and has followed the same methods of care and culture as in Texas. He is growing both Pima (long staple) and Durango (short staple) and while the district in 1919 averaged but three-fourths of a bale to the acre, the Phillips fields yielded more than a bale. A bale is about 1,500 pounds "in seed" or 500 pounds after ginning.

received for Durango in 1919 was 61¼ cents but some was sold in the seed because the crop had to be hauled to Fresno for ginning. This year more gins are being built and the haul will not be more than 25 miles, perhaps far less. On the day the writer visited the Phillips ranch 25 specimen plants were dug and boxed for exhibition at the state fair.

Other Local Crops

Only a mile or two from the Phillips ranch are the potato fields of Geo. H. Peters, to reach which we drove past a large acreage of alfalfa and cotton; the largest and tallest of the latter was found on the E. W. Simons ranch. Mr. Peters had 210 acres in potatoes this spring, all but 20 acres, of "British Queen," being planted to White Rose. Early plantings yielded 122 sacks to the acre, some late plantings far less and the whole crop was lighter than expected. But Mr. Peters says local land is getting too valuable for potatoes and some of his will next year be planted to grapes, Thompson Seedless on the lighter soils and Muscats, Emperor and Almeria on heavier lands.

Over toward Shafter F. E. Mannell has nine acres of Emperors in similar soil to that in the Weed Patch district east of Bakersfield, that have yielded such large crops that much local planting of grapes will result. Mr. Mannell's apricots were also of very large size this year and returned him \$750 an acre. The trees have been long pruned only. It is anticipated that large sections of the Arvin and Weed Patch districts will next year be planted to cotton as 1920 experiments point to larger profits than lie in present crops. Walter Kuntz, son of an official of the California Vegetable Union at Los Angeles, is spending a vacation on the Peter's ranch and believes no part of California has a more promising future.

CONCENTRATED CIDER WILL KEEP SWEET INDEFINITELY

Sweet cider, rendered commercially possible the year around by concentration, looms up as a healthful oasis in the arid desert of national prohibition, and opens a profitable outlet for wind-fall apples, say specialists of the United States bureau of chemistry.

They have developed a process for concentrating sweet cider which consists essentially of freezing the fresh apple juice, grinding the frozen product, and then by means of a centrifugal process separating the essential cider solids from the frozen water, in much the same way that cream is separated from milk. Five gallons of cider can be reduced by this process to one gallon of syrupy cider concentrate. This cider concentrate, being so much less in bulk, can be shipped and stored much more economically than the bulky fresh cider. It is also easier to keep sweet when concentrated. When it is desired to use the cider concentrate it can be restored to its original bulk, condition and flavor simply by the addition of ordinary drinking water.

Concentrated cider will keep sweet much longer than in its original condition, and in cold storage it will keep sweet indefinitely. Its reduced bulk makes it practicable to keep it in cold storage. The concentrated product thus promises to make fresh cider available at soda fountains throughout the summer months.

This product, to be profitable, should be made on a fairly large scale, and preferably in connection with a commercial ice plant located near an apple section. Since the cider season is short, it is doubtful whether it would be profitable to erect a refrigerating plant solely for the purpose of freezing the cider. As a by-product or side line to a regular ice plant the cost of the process would be reduced materially, as the cider making season comes at the very time when the demand for ice is greatly diminished by the approach of cold weather. As the concentrated cider has not yet been marketed on a commercial scale, those proposing to undertake the process should first satisfy themselves that they have a ready and convenient outlet for their product.

Detailed information regarding the process and the machinery will be furnished upon application to the United States Department of Agriculture, Washington, D. C.

HYATT

ROLLER BEARINGS

For Ensilage Cutters

THE farmer must handle his silage at the right season and have a dependable machine that will get the job done in time.

Hyatt Bearings in ensilage cutters make for more dependable operation. They require far less time for oiling, provide more economical operation, decrease the need for repairs and add greatly to the life of the machine. They never need to be adjusted.

And this is the kind of service that Hyatt Bearings also give in tractors, trucks, plows, threshing machines, grain binders, wind mills and other farm machinery.

Send for the Ensilage Cutter booklet.

POMONA AIR CLEANER

Seventeen Tractors at the Show Were Equipped With the Pomona Air Cleaners

DESCRIPTION—

In the POMONA AIR CLEANER separation of the dust from the air is effected in three stages in three parts of the cleaner. There is a centrifugal separation in the lower part of the cylinder and a second centrifugal separation in the space between the filter and the baffle. The final and complete cleaning is then effected in the oily fiber of the filter. In each case the dust is caught and held in oil which is the only certain way we have found for holding it.

The object of the two centrifugal cleanings is to relieve the filter from the heavy duty of taking care of all the dust. Thus we combine absolute thoroughness with large capacity and obviate the necessity of constant care.

The oil used in the cup and for saturation of the filter may be such as is drained from the crank case.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Cover for Walnut Orchard

I have a walnut grove, soil light and loamy, does not pack after irrigating. Would you suggest planting alfalfa in February and using it for a summer cover crop to be plowed a month before walnut picking time?—Subscriber, Anaheim.

Yes, if you have sufficient water, this would be good procedure, or perhaps it would be better to seed in October and secure deeper rooting system, that is, providing it is not caught by early frost this fall. However, we think that vetch or melilotus might give you better winter growth. Then

this could be plowed under in February or March and Whippoorwill cow peas could be planted, thus securing two cover crops. But, as noted above, be sure of your water, for both the summer cover crop and maturing nuts call for plenty of water during June and August.

Water for Fire Protection

We recently had inquiry as to amount of water necessary for fire protection of group of farm buildings having floor space of 2,000 square feet, two inch pipe 300 feet long with head of 150 feet. This was referred to the department of agriculture. It seems that the bureau of public roads has to do with such matters as water systems on the farm, and we have letter from S. H. McCrory of the division

A Quartet of Tractor Show Scenes

1. View of the extensive exhibit of the B. Hayman Co. with band in foreground. 2. Just a glimpse of the attractive display of the Avery Co. 3. Joy-Reans Co. display Willys light plants and Sharples cream separators and other dairy and electrical equipment. 4. First Southern California appearance of the Stutes-Mar tractor.

of rural engineering. Mr. McCrory writes:

"At least 4,000 cubic feet of water in storage would be required in order to receive recognition and credit from insurance authorities. Of course, a certain measure of protection would be afforded were the storage much less than stated.

"The conditions attaching to the pipe system, as stated in your letter, that is, 300 feet of two inch pipe and a head of 150 feet, would preclude the possibility of securing even one effective fire fighting stream. Under the conditions stated above, and without considering the losses in hose and nozzle, the discharge through new, clean, straight iron pipe would be not more than 140 to 150 gallons a minute, that is, that quantity of water would emerge through a full two inch bore, but at a velocity too low for fighting fire. If you desire to inform us as to the size and length of hose

canes on Sultana vines last year but they did not make any new wood. What should I leave this year? When is the best time to prune vines? Do you think a person would play safe to plant wine grapes, that is, will the price stay up? Or what grape would you advise planting? What do you think about the Malaga grape? Is it in big demand?—Subscriber, Arbuckle.

Owing to the present unsettled state of the grape varieties formerly grown for wine making we hardly feel justified in advising anyone what specific varieties to plant. You seem to be growing largely of raisin grapes. A member of our editorial staff recently made a comprehensive survey of grape growing districts and found growers of Thompson Seedless in the best districts very optimistic and largely extending their plantings. Also new districts having light or sandy soils will plant this variety (and oth-

Stockton SURE GRIP Tractor

Wins Instant Approval

Thousands of experienced farmers a day examined the new Stockton Sure Grip tractor at the National Tractor Show and gave it instant approval.

From front to rear, the Sure Grip is carefully built and will easily maintain the reputation established by the old reliable Stockton Open Wheel Tractor. Both types of the Stockton Tractor contain high grade material and workmanship, and in design and construction are modern, assuring power, economy, endurance and ease of handling.

You can now select your Stockton in either Track or Wheel Type, as required for your work, and know you are getting the best machine of its size on the market. You will be pleased and proud of your selection.

Investigate. Write today for particulars and Circular C. Mailed Free on Request.

and the size of nozzle you propose to use, we will be glad to advise you as fully as we can regarding the quantity of water that would be thrown and the distance that will be covered by such stream."

Mr. McCrory refers to a bulletin which, however, has more to do with pipes and carrying capacity than with amount of water required. This is "Water Systems for Farm Homes," is Number 941, and we believe may be had for the asking by writing Division of Publications, Washington, D. C.

Nematodes

Around Garden Grove some growth about size of beads attaches itself to roots, killing vines. After vine dies the inside of main stalk turns black. Attacks are spotted through the fields, no entire fields affected. What can be done to kill the pest?—Subscriber, Garden Grove.

Doubtless this is an infestation of nematodes, which are seriously affecting so many lands in California. About the only treatment for the pest is to grow crops which are resistant to their attacks. If this is done for three or four years they may be eradicated. Summer fallowing, especially during extremely hot weather, greatly reduces their numbers. Greenhouse treatment is possible by use of formaldehyde or steam, but this is not possible in open ground. The most serious feature of the problem is that nearly all garden and truck crops, beets, etc., are affected by the pest. Field crops that can be handled by dry farming, such as barley and other grains, grasses and sorghums are practically immune and their culture for a few years on affected land will clean them out.

Thompson Seedless—Malaga

What is the best way to prune three year old Thompson Seedless and three year old Sultana vines? I left two

ers) where other crops were grown the past years. Full directions for handling Thompson Seedless vineyards will appear in an early issue of the Cultivator under the title of "Among the Thompson Seedless," and as pruning is not done until early spring this article will sufficiently answer your questions on this phase of the subject.—E. B.

WINE GRAPES MAKE FOUNTAIN SYRUP

Red grape syrup made by the University of California and tested in several soda fountains has given excellent results as a beverage when diluted with carbonated water or when used in ice cream sodas. It is also declared to be well suited for use in water ices and similar frozen dishes. Syrup prepared by the freezing process is said to retain the full, rich, fresh grape flavor in concentrated form and is a delicious product both for home use and for soda fountain purposes.

The manufacture of red grape syrup is described in the College of Agriculture Bulletin, No. 321, by W. V. Cruess, assistant professor of food products, and will be sent free to prospective manufacturers upon application.

START CAMPAIGN ON MEALYBUG

Owing to the dissatisfaction among pear buyers, active work is being started in Sacramento districts by T. D. Urbahns of the state department of agriculture, through which the control of mealybugs on pears may be effected. This pest is objectionable because of the excretion of sticky "honey dew" on the fruit.

Deeper-Faster-Better

The "Caterpillar" Tractor Plow—combination disc and moldboard—satisfies every demand for ordinary and extraordinary plowing. It successfully combines light draft and heavy

service and is specially designed for Pacific Coast conditions and to work behind tractors of every type, width and power.

Light draft, because of lessened friction, permits deeper plowing, or the pulling of a greater width of plows, which means faster work, with no increase of power. Three-point suspension keeps the plowing depth uniform on uneven ground. Unique hitch keeps the tractor off plowed ground.

As a disc plow, the "Caterpillar" Plow has no equal. Strong disc standards, exceptional clearance, big discs that leave ridgeless furrows—these are a few of the special features. With the discs adjustable to five positions, covering a wide range of uses, the moldboard convertible feature of the "Caterpillar" Tractor Plow completes the plow requirements for the most diversified farming. Required changes from discs to moldboards are made quickly and with little work.

The plow has the steering principle of the automobile. The direction of the front wheels is directly controlled by the hitch. Five disc adjustments adapt the "Caterpillar" Disc Plow for use in the hardest or softest land. The lever control of the direction of the rear wheels makes it the only plow really suited for side-hill plowing. Extension bands on the wheels make it possible to use it even in marshy lands, with water in the furrow.

This Month in the Vegetable Garden

Southern California

By D. F. Reichard

HERE is lots to do about a well kept garden this month. First of all look after the growing stuff. See that moisture is kept supplied and don't fail to attend to the cultivating. At this time of the year it is always well to begin cleaning up what is left of the summers' growth, taking out all dead vines and plants. Any that have been infested with insects or fungus disease should be burned and all healthy plants and rubbish should either be put into the compost pile or turned into the soil. The more of this litter that can be put into the soil the better your soil will be. We cannot expect to keep taking crops from our garden without putting something back, and this roughage that is obtained from garden litter is one of the best foods for your next year's plants, beside giving humus which keeps your soil porous and enables it to retain moisture as well as giving the desired aeration. Besides what roughage we can accumulate from our garden there should be added during the fall months, on such ground as is not occupied by growing crops, barnyard fertilizers (get this as fresh as possible), and strew it over your land two to four inches thick and let it leach into the soil. After having had one or two good soaking rains on it, spade or plow it under. In the old countries at this time of the year they do what they call trenching, which is done by spading trenches two feet or so deep and filling them in with a foot or so of litter composed of tree prunings, leaves and other roughage that accumulates around the place, and then covering this with the dirt from another trench alongside, continuing this through the garden as long as the roughage lasts, then the next year continuing this with the roughage accumulated during that year. In this

way they go over the space every three or four years.

On growing plants where these manures cannot be worked in at this time of the year an application of high grade fertilizer is very desirable and will give your plants the desired luxuriant growth. In planting one's garden the space where your growing crops are this year should be alternated so that it will get the roughage next year.

Plantings during this month will consist of the more hardy vegetables. It will consist in the planting of seeds of Egyptian beets; carrot, Half Long and French Forcing; cabbage; cauliflower; Swiss chard; curled endive; chicory; New York or Los Angeles market lettuce; leeks; parsnips; radishes; turnips; winter spinach; peas, Laxtonian for something quick maturing and Stratagem and Senator for a little later. In protected foothill sections put in Canadian Wonder and Ventura Wonder beans. October is one of the best months to put out garlic and onion sets, the Bermuda varieties being preferred for quick early onions. Set out plants of Winningstadt or Cannon Ball cabbage; early cauliflower and lettuce.

Take in your matured winter squash and pie pumpkins, as an early frost may catch them and do them some damage. Store these in a fairly cool, dry place. Sweet potatoes should also be dug, for if the vines get frost bitten it seems to affect the tubers, taking much of their flavor from them. Take up the potatoes so as to scratch and bruise them as little as possible, stowing the perfect ones either in dry sand or wrapping each in dry newspaper and keeping in a sheltered, dry place. In this way they should keep in perfect condition until February or March.

Northern California

By A. R. Gould

HERE will be plenty to do this month to get the old plots cleared off, and these may be prepared by thoroughly trenching with well rotted manure. All garden refuse should be buried with lime, but diseased plants should be burned as there is danger of fungus spores being wintered in the soil to become a pest next season. It is essential that every gardener be very observant in regard to fungus diseases, as, if these are not stamped out, they eventually will prove a serious menace. In planning for next season's crop change the location as much as possible. Collect seed from any desirable types of beans, tomatoes, melons or squash, dry carefully and store, keeping a full description on record as to date of collection, etc.

Carrots

Sow for succession on well prepared ground in rows 16 to 18 inches apart; French Forcing and Danvers Half Long, and thin out any sown last month to at least six inches apart. Cultivate between the rows of seedlings.

Beans

Seeds of the late sown varieties may be collected. Shell beans are easily stored for the winter and are useful, especially the small white. The Broad Windsor, a fine winter type, may be sown now in rows two to three feet apart. These grow two feet high and are very hardy.

Peas

The early varieties may be sown. For this crop the ground must be deeply cultivated and a moderate amount of manure applied. By sowing at intervals of a few weeks a successional supply may be obtained. There are two types, tall growing and dwarf. The latter are generally more easy to grow and some varieties are heavier

croppers. The tall varieties require stakes or wires for support. Seeds should be sown in rows, not too thickly, two feet apart. Early varieties dwarf to sow now are Laxtonian, Blue Bantam and Little Marvel. Gradus and Alaska are good tall varieties to grow. One pound of seed should sow 100 feet. They require plenty of water during the growing season.

Lettuce

Keep up a successional supply by planting this month Los Angeles or May King. White Paris Cos is a very popular variety, also known as romaine, and is hardy. Sow the seed in rows 20 to 24 inches apart, thinly or broadcast in a seedbed and later transplant.

Celery

Keep this crop well earthed up to blanch the stems. It will keep many months in the ground and may be also stored in soil in the cellar if the ground is required for other crops.

Tomatoes

Pick all sound fruits of this crop this month and these will ripen inside for late use.

Beets

Thin out the plants of those sown last month to six inches apart in the row. Store in the cellar all roots now matured.

Kale

Keep the cultivator busy between the rows.

Cabbage

At the end of the month plant out the best plants from the varieties sown last month. Plant firmly 12 inches apart in rows two feet apart.

Swiss Chard

Thin out this crop sown last month as advised to ten inches apart in the

Better service is assured by the advertiser if when writing you mention the California Cultivator.

row. There is still time to make a sowing of Giant Lucullus.

Onions

The ground may be prepared for the early varieties by deep trenching and rich manuring. Sow Early Pearl, Early Californian Red and White Bermuda, very thinly in rows about 20 inches apart.

Radish

Sow the winter varieties, Rose Winter and Black Spanish, in rows 18 inches apart.

Leeks

Frequent applications of liquid manure will improve this crop.

Strawberries

Planting new plots is still in order and good varieties may be secured for planting, such as Oregon Improved, Marshall, Brandywine and Banner. The last named is a very large cropper and much in demand. Plant on rich soil 12 inches apart in rows at least 2½ to 3 feet apart to allow for development and proper cultivation.

Raspberries

Secure canes of this for planting in well prepared rows three feet apart. Cut back this year's canes to three feet high and thin out the canes. St. Regis and Cuthbert are two excellent varieties to grow. Apply manure to the old plots and dig well in.

Southern Arizona

By M. E. Bemis

OCTOBER plantings of garden vegetables are more extensive than for September. The list includes beets, cabbage seed, cabbage plants, carrots, celery, cauliflower seed, cauliflower plants, endive, kohlrabi, leek, lettuce, onion seed, onion sets, parsley, parsnips, peas, radishes, salsify, spinach and turnips.

Seedsmen tell me that there is an increasing interest in fall gardens this year and that the demand for seeds is to them an indication that there is something of a revival of home garden work. Making a garden may be taken as prima facie evidence of a return to sanity. Let us hope so, anyway.

In some parts of the country the influence of the federal bureau of education in school garden work is helping. For a number of years the city schools of Phoenix have maintained gardens near each of the grammar schools, and here under competent instruction the boys have been given an opportunity to learn something of real garden work. Each boy is given a plot of ground and permitted some latitude in the selection of the things which he will plant, and then he is required as a part of his manual training work to keep the plot cultivated. The boys receive instruction which will be of invaluable help in after years. These gardens are seen by thousands of people and stimulate a garden making spirit.

As one might gather from the list of plantable things for October, garden work here is not so very different from spring garden plantings in the northern and eastern sections. There is some difference though. Cabbage seed if planted should be put in the ground where the plants are to grow. Cabbage plants may be purchased and put out. Onion seed for transplanting is probably not as desirable as onion sets. Late peas are more desirable for planting now than early ones, but the latter part of the month is early enough for those.

Beets, carrots, radishes, turnips and plants of this kind may be planted in the usual way and almost continuously.

As commercial crops lettuce and spinach offer the greatest inducements. Lettuce growing has come to be one of the established industries of the Salt River Valley. Spinach has also proved profitable. The main crop of both these should be planted in October, if not already in.

The quality of the pears being turned out by the farm bureau evaporator at Placerville is declared to be satisfactory in every respect and fully equal to the sun dried product.

San Joaquin Holds First Fair in 18 Years

By R. P. Royce

AFTER a lapse of 18 years the wonderfully rich county of San Joaquin swung into line with the other good counties of California and held a highly successful fair, September 14-18. And let it be said that when it was decided to hold a fair the agricultural interests of that county set about it in a most business like and progressive manner. The old fair grounds near the edge of town that had been unused all those years was taken in hand and literally rebuilt—and rebuilt in a manner that gives to San Joaquin County the right to claim the best equipped plant for the holding of a livestock show of any county in the state, and in many ways the equipment excels that of the state fair.

The seven new barns, six for cattle and one for swine, are of splendid design and permanent construction, being built of cement and hollow tile. Several of the barns have rooms above for the living quarters of the men in charge of the livestock, and are provided with all conveniences, including showers. The swine barn is the largest of the group and in addition to the pens has a commodious judging ring. It is rather remarkable that with all this new equipment more room is needed and contemplated for next year.

The fair spirit has been awakened in that county and from now forward it can be certain that the annual San Joaquin County fair will come to occupy an important place in the fair season of this state. The spirit of the promoters is fine and finds its justification in knowledge that they have made a definite contribution to the future welfare of their community. It was really astonishing to hear the visitors remark that they had no idea that their county was the home of so many superior herds and flocks of livestock, and exhibitors declared that they came in contact with more real prospective buyers than they encountered at the state fair.

While livestock was the outstanding feature of the show, it is not to be inferred that the other departments were lacking in interest or exhibits. The entire show was one of balance and a credit to the community. There was the usual line of shoddy concessions that are afflicting all the fairs the present season. The visitor, after successfully fighting his way past the ballyhoosers with their cheap displays of claptrap, came to the largest industrial tent, wherein was housed a complete showing of industrial exhibits. Then came the farm bureau tent, filled to capacity with splendid displays testifying to the wealth of production of the different farm centers. Eight or ten centers had displays, all good, but hardly up to the standard set by the Escalon center, that was awarded the first prize of \$300. The Linden center rather specialized on nuts and won second, and the Farmington center was third.

Then came the machinery exhibit, and it was all that might be expected to represent such an admitted center of implement and tractor manufacturing. There have been state fairs that could not boast of a better display.

Next came the livestock exhibit, the outstanding features of which were the exhibits of dairy cattle and hogs. The Holstein department boasted of the heaviest entry list. The local breeders of the Escalon district were out in force to measure strength with their neighbors from Stanislaus County who had been induced to stop over on their way home from the state fair. Nearly all the classes were comfortably filled and of a quality to furnish Arthur L. Ingebritsen, the judge, plenty of work. H. E. Cornwell of Modesto carried off the grand champion bull award with his outstanding bull, Sir Johanna De Kol Rag Apple; R. L. Holmes of Modesto took like rating with his splendid cow, Mona Fobes, and in doing so reversed the rating given at Sacramento when Holmes' other entry, Ida Lotta Winifred Burke, stood above her stall mate. Mona Fobes is a cow of most acceptable type, especially strong in constitution, of correct lines and swinging a better balanced udder than her chief competitor.

Other Holstein exhibitors were:

Azevedo Bros., Patterson; M. J. & B. A. Edwards, Ripon; J. M. Campbell, Escalon; J. C. Ramsey, Escalon; J. W. Scudder, Escalon; F. A. Darling, Escalon, and Salfeld & Condon, Stockton.

Closely following the Holsteins, the exhibit of Jerseys was one of much class, several of the herds coming direct from the state fair. Most of the competition was furnished by the three veteran breeders, J. E. Thorp, Lockeford, Guy H. Miller, Modesto, and N. H. Locke, Lockeford. However, it remained for a small breeder, G. A. Moore of Ripon, to walk away with the female championship on the 14 year old cow, Empress Lass. An interesting development of the show was the fact that it was a son of the champion cow, Empress' Valet of L., shown by Locke, that was made senior and grand champion bull. It will be remembered that Empress Lass has to her credit several championships, including that award at the Alaska-Yukon Exposition. Miller had the junior champion female and Thorp the junior champion bull. Other exhibitors were D. T. Wieland, Valley Home, and E. J. Wilson, Ripon.

A. B. Humphrey of Escalon was the only exhibitor of Guernsey cattle, having his entire show herd entered.

George Murphy of Perkins made the only showing of Milking Shorthorns.

Professor E. H. Hughes of the college of agriculture placed all the cattle awards save the Holsteins.

Two herds of Shorthorns were exhibited. George E. Dierssen, owner of the Wildwood herd, Sacramento, had the grand champion bull, Clarion. H. L. & E. H. Murphy, Perkins, had the champion female, Roan Gloster.

In the swine department the Poland China exhibit was the largest. Three herds, Geo. V. Beckman & Sons, Lodi, J. F. Lehman, Lodi, and N. K. Horan, Lockeford, competed for the awards placed by C. E. Howell of the college of agriculture. Lehman had all the boar champions and the grand champion sow. Horan had the junior champion sow.

The Duroc-Jersey competition was limited to the herds of J. E. Thorp, Lockeford, and The Western Laboratories, Stockton. Thorp had the sow champions and the junior champion boar. The Western Laboratories had the senior and grand champion boar.

A. B. Humphrey of Escalon had the only Berkshires entered.

Calla Grove Farm, Manteca, exhibited Hampshire sheep.

Only a few horses, and of most mediocre quality, were shown.

EDUCATIONAL DAIRY EXHIBITS AT L. A. LIVESTOCK SHOW

The dairymen's department of the Los Angeles County farm bureau is planning a large exhibit at the Livestock Show, October 2-10. The exhibit will include demonstrations of the value of cow testing and the influence on the improvement of the herd exerted by the use of a pure bred sire.

The dairy cow competition being staged will have cups and medals on display at the show.

An attractive comparative food exhibit is being arranged by the California Dairy Council. The display will show the food values in milk and other dairy products as compared with other foods, also the actual amounts of the different elements contained in a gallon of milk and their action upon the human system. A trained woman will be in charge of the exhibit and she will talk to children and parents regarding the necessity for an adequate supply of milk in the diet.

Another Dairy Council feature will be the operation of a milk bar for the purpose of demonstrating what delicious and nourishing drinks may be made with milk.

The council will also cooperate with the farm bureau in maintaining a demonstration herd of dairy cows to show the benefits the dairymen can obtain from belonging to cow testing associations.

THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

Gaustic Balsam

IT HAS NO EQUAL

BLOOD OF FINANCIAL KING

In the great young sire, Lady Shylock's Financier 148173, will be found some of the very best blood lines in the United States. His sire, Shylock's Financier 84645, is by Fabby's Shylock 70334, sire of Shylock's Buxom Beauty 195695, who produced as a two year old 467 pounds butter from 7,529 pounds milk. He is also the sire of Financial Countess' Lad, grand champion bull at Waterloo, Iowa, sold at auction for \$5,000; Sans Aloï, grand champion bull at Colorado state fair; also Mayfield Lottie, first prize two year old, 14 entries, Illinois state fair. His dam, Financier's Countess, was sired by Financier, who was out of the same dam as Financial Countess, the highest testing daughter of Financial King, the dam being Financial Countess, with a record of 935 pounds butter at six years, and she being sired by Financial King, a prize winner in the Royal Show, sire of 15 tested daughters and 13 proven sons.

In addition to this royal breeding, on the sire's side will be found such great sires as Carnation's Fern Lad, sweepstakes bull, Iowa state fair, sweepstakes Kentucky state fair, also sweepstakes Indiana state fair; Imp. Golden Fern's Lad, Champion North Club Show, Jersey.

The dam is that good cow, Fern's Imperial Lady 256861, with a record of 730 pounds 13 ounces of butter from 11,507 pounds milk, whose sire was Fabby Shylock 70334, and out of the cow Rowena's Daisy, a winner in the Royal Show, Jersey, and grand champion at the Oklahoma show.

This great sire is now at head of the Grant A. Brown herd at El Monte, where his daughters will be raised and developed.

Among the high record, Register of Merit cows in calf by him are Gertie of Willowwood, 568.17 pounds fat from 8,957.7 pounds milk; Gene of Willowwood, a two year old with a record of 530.07 pounds fat from 8,333.9 pounds milk; Conquest's Nellie, 473.05 pounds fat from 9,569.9 pounds of milk; Golden Grey Miss, three year old, with 469.19 pounds fat from 6,981.1 pounds milk; Lottie of Willowwood, two year old, with 413.9 pounds fat from 8,382.5 pounds milk; and Fawn of Willowwood with 417.8 pounds fat from 8,620.4 pounds milk; and Fauver of Willowwood, with 388.33 pounds fat from 7,993.5 pounds milk as a senior yearling.

The owner is closing out practically all of his cows, retaining nothing but the young things sired by Lady's Shylock's Financier, which he intends to develop and break world's records with.

CATTLEMEN'S MEETINGS

A meeting of Zone V will be held in Lecture Hall, Agricultural Building, Los Angeles Fair Grounds, on Thursday, October 7 at 10:30 a. m., and it is hoped there will be a large attendance of visiting cattlemen from Zone V.

Meetings of the county associations will be held during the next two months at which delegates to the zone conventions on November 20 will be elected.

Effort is being directed toward the holding of an enthusiastic and largely attended annual meeting at the Palace Hotel, San Francisco, on Saturday, December 11, and this will consist of an all day session of some splendid addresses culminating in a banquet in the evening. It is hoped that at least 500 cattlemen will attend and the meeting promises to be one of the best yet held under the auspices of the California Cattlemen's Association.

NATIONAL BOARD OF FARM ORGANIZATIONS

The National Board of Farm Organizations, with headquarters in Washington, D. C., held its semi-annual conference in Columbus, Ohio, September 1-3. Chairman C. S. Barrett presided, and addresses were made by John McSparran, master of Pennsylvania State Grange, Dr. Taylor of the bureau of farm management, former Secretary Flannagan of the federal farm loan board and C. W. Holman of the National Temple of Agriculture. Mr. Flannagan is working for a national union of farm loan associations. Twenty states have responded and will work in accordance with his plan.

ECONOMY STOCK POWDER**Conditioner, Worm Expeller, Disease Preventive****For Hogs, Cattle, Horses and Sheep**

Economy Stock Powder is not a stock food, but a purely medicated compound. It will keep your stock free from worms and build up the constitution. It will pay you in more pounds of fat out of grain fed. It's like writing insurance on your herd against disease, as it purifies the blood, sweetens the stomach, expels and destroys all germs, worms and parasites, and it keeps your stock in a healthy condition.

ECONOMY GERMICIDE DIP**Disinfectant, Germicide and Antiseptic**

Will absolutely rid your stock of parasites, lice, mange, scurf and improve the coat of hair. Guaranteed to prove satisfactory.

Write for our free literature.

COMBINATION**Pre-Breeding Season Sale Poland Chinas**

Sale to be held on Wednesday, October 27th, at LOOKINGBILL & VELZY'S UNION STOCK AND SALES YARDS, POMONA.

40 head of useful breeding stock from the well known herds of E. Avery Newton, Lankershim, and H. Christiansen, Arlington, will be catalogued for this occasion, and papers for every animal sold.

This sale is to be known distinctly as "a pre-breeding season sale." With three or four exceptions these sows and gilts are purposely sold open, that new owners may mate them in November to their own boars for March litters.

First Prize and Grand Champion Blood

Three crack herd boars, also a few young boars of early spring farrow, to be found in these offerings.

SIX DAUGHTERS OF KING PONTIAC NETHERLAND SEGIS 3D

MINITA SEGIS PONTIAC, 29.91 lbs. butter in 7 days at 3 yrs. 6 mos. Her dam a 17 lb. 2 year old daughter of King Pontiac Netherland Segis.

MAMIE PONTIAC, 25.36 lbs. butter in 7 days, 99.44 lbs. in 30 days at 3 yrs. 2 days. Her dam a 17 lb. 3 year old daughter of Homestead Barnum Paul De Kol.

CORA JARIE PONTIAC, 22.04 lbs. butter in 7 day at 3 yrs. 5 days. Her dam a 23 lb. cow.

DOUWE PONTIAC, 18.22 lbs. butter in 7 days, 72.62 lbs. in 30 days, at 2 yrs. 2 mos. Her dam a 21 lb. 4 year old daughter of Jetske of Oakwood Romeanna.

QUEEN PONTIAC MAGGIE, 19.08 lbs. butter in 7 days at 3 yrs. 5 days. Her dam a 23.85 lb. daughter of Woodcrest Hengerveld De Kol.

MISS SEGIS PONTIAC WALKER, due for first calving about sale day. Her dam is a 27.89 lb. senior 3 year old daughter of Prince Gelsche Walker Korndyke, second dam the great 28 lb. cow Locust Terrace Gold Drop.

MAMMOTH DISPERSAL

Rosamaines Rancho

OCTOBER 19

KING PONTIAC NETHERLAND SEGIS 3D 155988

27 A. R. O. daughters with records to 29.91 lbs. butter in 7 days for a senior 3 year old. Sire: KING PONTIAC NETHERLAND SEGIS, a son of King of the Pontiacs and a daughter of King Segis Pontiac. He has two daughters above 31 lbs. butter in 7 days. Dam: GERBEN ABBEKERK MAID (shown at bottom of this page.) She has three records above 30 lbs. butter in 7 days, two of them above 34 lbs., is the dam of nine living sons and daughters, is now only nine years old and sells safe in calf. Here is one of the greatest young proven sires in the west.

PART OF THE BARN AT ROSAMAINES RANCHO

The decision to sell this Rancho at public auction, and the managing owner, Mr. A. J. Stalder, offers for public appraisal and will invite the investment of the man or combination of men with the start.

Tuesday, October 19

at 9 A.M. sharp, we will open the dispersal with the sale of ROSAMAINES RANCHO

LOCATION—Rosamaines Rancho is located in Riverside County, California, 45 miles east of Los Angeles, 12 miles west of Riverside, 3 miles south of Wineville. The main boulevard from Los Angeles to Riverside passes through Wineville, as does also the Salt Lake Railroad.

ACREAGE—The Rancho will be sold in two parcels, one of 235 acres, the other of 397½ acres adjoining on the north.

THE 235 ACRE PARCEL—The Rancho buildings go with this parcel, and it constitutes a livestock breeding equipment that is equalled by a very few in the west.

The improvements alone cost over \$200 per acre at normal costs, and could not be duplicated at near that price today. The buildings and equipment are essentially practical, there has been no investment for show purposes, and by all who know the rancho it is regarded as one of the most efficiently laid out in California.

100 acres of the Rancho are bottom land pasture, with an abundance of shade and water. This is positively one of the greatest, if not the greatest, pastures in all of California. It has carried as many as 150 head of cattle from the thin feeder stage to a prime quality of grass beef, and is a dependable, all-the-year-round grazing ground. If put under cultivation this soil would produce successfully practically any crop now grown in the state.

The balance of the Rancho contains 60 acres of splendid alfalfa and 40 acres now in corn for the three silos. A wonderful production of alfalfa of fine quality and a tremendous growth of corn afford each year sufficient feed to carry a number of cattle rarely carried on equal acreage.

There are two pumping plants equipped with motors, with an unfailing supply of water sufficient to thoroughly irrigate the cultivated area.

The buildings consist of a concrete floored, steel equipped milking barn, a large barn for test and show cattle with commodious space for hay and feed storage, a big horse barn with hay loft, a thoroughly practical system of covered shelter and feed sheds with fenced paddocks leading down to the pasture, milk house, office building, and two cottages.

All buildings are electric lighted, and both houses and barns are sewerd.

This Rancho is equally desirable for beef cattle or dairy cattle breeding, and is one of the greatest opportunities offered in years for the purchase of a thoroughly practical, productive, well located, well watered, livestock farm that has made money for its owners, is now making money, and is in better shape today to make still more profit for its new owners.

TERMS—Exceedingly liberal terms will be given the buyer of this parcel, one-third cash, balance in six equal annual payments, with interest at seven (7) per cent payable semi-annually, two (2) per cent discount for cash on deferred payments.

THE 397½ ACRE PARCEL—This lies directly north and adjoining the 235 acres above described. Every acre of this land is in crop regularly, and is all first class vineyard land and suitable for orchards or alfalfa and has an abundance of cheap water. This is a first class investment proposition.

TERMS—Very liberal terms will also be given the buyer or buyers of this parcel, one-half cash, the balance in four equal annual payments, with interest at seven (7) per cent payable semi-annually, two (2) per cent discount for cash on deferred payments.

OIL PROSPECTS OF THIS RANCHO—Oil production is today, and promises to remain, one of the world's great problems. Oil yielding lands have therefore become enormously valuable, and the surface of the earth is being searched for oil producing fields. This Rancho is in the oil producing area of Southern California, all of the lands to the west and north adjoining having already been leased, and wells are actually drilling within two miles. The present owners have been offered oil leases either on a cash or royalty basis, and seriously considered making the leases prior to sale of the Rancho. A decision was finally reached, however, to let the property go into the hands of new owners absolutely unencumbered, affording them an opportunity to make such leases or not as they see fit.

ROSAMAINES RANCHO will positively be sold to the highest bidder, and it is a property worthy the best consideration and the fullest investigation of either one man or a company. The very liberal terms make it an especially good buy, and it is the sort of investment for which the pioneer work has been completed and the plant today is in the best condition to make profit in its history.

YOUR PARTICULAR ATTENTION is invited to the quality and numbers of breeding animals now being carried on the Rancho, all of which will be sold following the sale of the real estate. Practically all of these animals have been raised on the Rancho, on home grown feeds, and you will note the splendid size, quality, and condition apparent throughout, all of which are prime factors in successful breeding.

Immediately following the sale of the Rancho, the same day, we will sell

90 BIG RED GRADE SHORTHORN COWS

18 REGISTERED PERCHERON MARES AND STALLIONS

50 REGISTERED DUROC-JERSEY HOGS

1800 WHITE LEGHORN HENS AND PULLETS

A SMALL HERD OF GRADE DAIRY HEIFERS

ALL THE IMPLEMENTS AND EQUIPMENT

including a nearly new 12 foot McCormick combine harvester; a No. 50 Typhoon ensilage cutter; 8 farm wagons; discs, plows, rakes, mowing machines, harness; a complete acetylene lighting plant; and many other items.

Wednesday and Thursday, October 20-21

We will sell at Public Auction

150 Registered Holsteins

This is in many respects one of the most remarkable herds of registered Holsteins ever dispersed. It represents today the accomplishment of a man who started out with very definite ideas of what a profitable breeding herd should be, and few men have ever followed more closely their original plan.

The details of excellence of the various individuals in the sale are too extensive to be fully set forth in this limited space and can be appreciated only with the animal and the catalog pedigree before you, but to give a comprehensive outline of the offering it may be summarized in groups as follows:

PERSAL SALE

Riverside, Cal.

Owned By
& F. W. STALDER

20-21, 1920

SIR ORMSBY SKYLARK RAUWERD 273665

Sire: SIR ORMSBY SKYLARK, famous as the sire of Duchess Skylark Ormsby, the only cow that ever produced over 1500 lbs. butter in one year. Dam: BEAUTY RAUWERD HENGERVERELD 2ND, 34.51 lbs. butter in 7 days, she by a half brother of King Segis and out of a 29 lb. daughter of Pietertje Hengerveld's Count De Kol. Here is a young sire that combines some of the very greatest producing lines of the breed. He is a show bull, and although only 20 months old at time of sale there will be more than 50 cows and helpers in calf to him.

SIX 2 YEAR OLD DAUGHTERS OF
SIR SKYLARK ORMSBY
HENGERVERELD

ALICE ORMSBY CREAMELLE HENGERVERELD, 22.59 lbs. butter in 7 days, 90-21 lbs. in 30 days, at 2 yrs. 5 mos.

SKYLARK BUBBLE, 16.02 lbs. butter in 7 days, 62.46 lbs. in 30 days, at 2 yrs. 6 mos.

(Inset) THE BOTTOM LAND PASTURE.

its splendid herds of livestock, due to the ill health of the the very greatest breeding plants in the west, one that may at a going ranch that is equipped to pay dividends right from

ONLY NINE ANIMALS OVER SIX YEARS OLD

In the entire herd there are only nine animals that are six years old or over, these including some of the greatest individuals, and there are ONLY TWELVE ANIMALS OVER 4 YEARS OLD.

BOTH HERD BULLS WILL BE SOLD

The senior herd sire, KING PONTIAC NETHERLAND SEGIS 3D, with 27 A. R. O. daughters, and an approximately 60 living daughters, is without question one of the foremost young sires of the breed. His get have real dairy quality, his daughters have made splendid short time records and a number are making noteworthy long time records at now. He is worth a fortune at the head of a herd of good females.

The junior herd sire, SIR ORMSBY SKYLARK RAUWERD, is by the same sire as Duchess Skylark Ormsby, 1506 lbs. butter in one year, the present world's record, and she is the only cow of any breed to ever made 1500 lbs. butter in one year. His sire, a cow of wonderful breeding and great production (described under his picture above), was well mated with Sir Ormsby Skylark. He is only 20 months old at time of sale, yet at least fifty cows and helpers will be in calf to him at that time, and is in the pink of condition, and an individual of a new type.

GERBEN ABBEKERK MAID AND FIVE DAUGHTERS

GERBEN ABBEKERK MAID, the famous three year 30 pound cow, twice over 34 lbs., will be in sale, also five of her daughters. This grand cow, one of the foremost dams of the breed, is only nine years old, has nine living calves, and sells safe in every way.

15 DESCENDANTS OF GERBEN ABBEKERK MAID

We doubt if any sale catalog ever issued before has contained a cow and 105 of her descendants. It affords a wonderful selection of unique breeding and type to the founder of a new herd, the productive power of this family has been demonstrated fully.

SEVEN HALF SISTERS TO GERBEN ABBEKERK MAID

The sire of Gerben Abbekerk Maid, SIR SKYLARK ORMSBY HENGERVERELD, was doomed to obituary in a grade herd during the most vigorous years of his life, and it was only when his few half-bred daughters began to produce that his real worth became apparent. As a consequence he was mated to purebred females exclusively during the last years of his life, and there are in this herd seven of his 2 year old daughters, a splendid group of animals, and one that would make a real foundation for a new herd.

ER 50 FEMALES WITH OFFICIAL RECORDS

While the herd is essentially one of young animals, yet more than fifty of the females have official records ranging up to over 34 lbs. butter in 7 days, a large number are now on yearly test and making splendid records.

DAUGHTERS OF KING PONTIAC NETHERLAND SEGIS 3D

There is a group of young females worthy of the careful investigation of the man looking for foundation stock or the breeder who wants to add strength to his breeding herd. Many of them have excellent official records, up to 29.91 lbs. butter in 7

days for a senior 3 year old, and most of them are out of dams with good records and breeding.

28 DAUGHTERS OF ROSAMAINES PONTIAC NETHERLAND

This sire is by KING PONTIAC NETHERLAND SEGIS 3D, out of STANISLAUS PRINCESS CLEOPATRA, who made 31.04 lbs. butter in 7 days as a senior 3 year old, and 32.07 lbs. butter in 7 days as a senior 4 year old. This is another noteworthy group of heifers, in fine condition and high class in every way.

5 DAUGHTERS OF PRINCE ARLIA WALKER

This sire is by the famous PRINCE GELSCHE WALKER, and out of ARLIA DE KOL 3D, who made over 1100 lbs. butter in one year, and her dam the first cow to make over 28,000 lbs. milk in one year, and a record of 1142.32 lbs. butter in one year. Sisters to these heifers have made up to over 27 lbs. butter in 7 days for a 3 year old, and these also are most desirable as breeding females.

30 FEMALES BRED TO KING PONTIAC NETHERLAND SEGIS 3D

Approximately thirty of the females in the sale are in calf to the senior herd sire, and the breeder who is fortunate enough to own daughters of this sire is bound to have some of the most desirable breeding females in the state, heifers that will grow more valuable as their sisters further increase the splendid records they have already made.

50 FEMALES BRED TO SIR ORMSBY SKYLARK RAUWERD

Here is a combination that should find favor with every man looking for high class Holsteins. Consider that most of this group are daughters of KING PONTIAC NETHERLAND SEGIS 3D and ROSAMAINES PONTIAC NETHERLAND, and as this young bull will without doubt go to head some high class herd, his offspring will be correspondingly valuable.

THIS IS AN ORMSBY OFFERING

This herd represents the largest offering of ORMSBY breeding yet made in the west. Remember that the sire of Gerben Abbekerk Maid, the foundation head of this herd, was by the same sire as Pietertje Maid Ormsby, who was the dam of SIR PIETERTJE ORMSBY MERCEDES, the world's greatest sire of dairy producers and show ring winners, and whose blood commands some of the very highest prices in the best sales.

THIS IS A HEALTHY HERD

As stated before, regular breeding has been a prime requirement in this herd, and the tuberculin test reveals that this is one of the cleanest herds in that respect. Every animal is positively guaranteed to be a breeder; every animal over six months old is tuberculin tested and sold subject to retest by the buyer, except as announced at time of sale.

CATALOGS OF SALE GLADLY MAILED ON REQUEST

Management

California Breeders Sales and Pedigree Company

C. L. Hughes, Sales Manager, Sacramento, California.

Auctioneers: Rhoades and Rhoades, Los Angeles

NOTE.—Headquarters of sale will be at Hotel Reynolds, Riverside, from which place transportation to sale will be furnished to parties coming in by train.

COUNTLESS SKYLARK ORMSBY, 15.58 lbs. butter in 7 days, 61.81 lbs. in 30 days, at 2 yrs. 5 mos.

STANISLAUS BELLE HENGERVERELD, due to calve about sale day. She is out of the same dam as Belle Faskie Hengerveld De Kol 2nd, Grand Champion cow at California State Fair, 1918, and dam of the famous 2 year old Belle Faskie De Kol Witkop, the leading money winner last year in the Holstein-Friesian Association of America Prize List.

ROSAMAINES SEGIS ORMSBY, will be fresh before sale.

STANISLAUS SKYLARK INKA DE KOL, due to calve shortly after sale.

When Writing Advertisers Mention California Cultivator

The Tulare County Fair

THE Tulare County fair, held at Tulare, September 14-18, was strictly an agricultural and livestock show and in the size and quality of exhibits ranks among the better shows of the state.

The show this year was larger and better than any previous year. Not only from the standpoint of attendance is this true, but also considering the character of the exhibits. In the livestock department every stall and pen was full and several herds had to be turned away, as there was not sufficient room on the grounds to care for them.

The majority of the animals shown had come from the state fair and were en route to the Los Angeles livestock show.

Not only were the exhibits of state fair caliber, but most of those shown were among the heavy winners at the state fair.

In a number of classes the animals shown included the individuals that won every ribbon in their class at Sacramento.

The board of managers is to be commended on its efforts toward improving the livestock standard in Tulare County.

The agricultural and fruit exhibits were of a high order and attracted a great deal of attention from all present.

CATTLE

The showing of dairy cattle, as one would expect in such a dairy county as Tulare, was especially creditable. Holsteins led in numbers, closely followed by Jerseys and Ayrshires.

Judge John L. Smith of Seattle, Washington, placed the awards in a very satisfactory manner.

The Holsteins

The Santa Anita herd, owned by Mrs. Anita M. Baldwin, Santa Anita, was the heaviest winner, followed by those of W. J. Higdon, R. F. Guerin of Tulare, and others. Most of the leading winners at Sacramento were in the lineup and made the show an exceedingly strong one.

Aged bull — 1, Santa Anita Rancho, Santa Anita. 2, Tony Corria, Tulare. 3, Santa Maria Farm, Tulare.

Senior yearling—1, W. J. Higdon, Tulare. 2, T. J. Gist & Sons, Tulare.

Junior yearling—1, Santa Anita Rancho. 2, Allison & Storm, Tulare.

Senior bull calf—1, H. G. Ball, Tulare. 2 and 3, Santa Anita Rancho.

Junior bull calf—1, H. G. Ball. 2, W. J. Higdon. 3, Alex. Whaley, Tulare.

Aged cow — 1 and 3, Santa Anita Rancho. 2, R. F. Guerin.

Two year old—1 and 2, Santa Anita Rancho. 3, Corria.

Senior yearling heifer—1 and 2, Santa Anita Rancho. 3, Gist & Sons.

Junior yearling heifer—1, 2 and 3, Santa Anita Rancho.

Senior heifer calf—1 and 2, W. J. Higdon. 3, Santa Anita Rancho.

Junior heifer calf—1 and 2, W. J. Higdon. 3, Santa Anita Rancho.

Aged herd—1, W. J. Higdon. 2, Santa Anita Rancho. 3, Alex. Whaley.

Young herd—1, W. J. Higdon. 2, Santa Anita Rancho. 3, Alex. Whaley.

Get of sire—1, W. J. Higdon. 2, Santa Anita Rancho. 3, Alex. Whaley.

Produce of dam—1, W. J. Higdon. 2, Santa Anita Rancho. 3, Corria.

Junior champion bull—W. J. Higdon on Prince Bonnie Walker.

Senior and grand champion bull—Santa Anita Rancho on Merci Lad Korndyke.

Junior champion female—Santa Anita Rancho.

Senior and grand champion female—Santa Anita Rancho.

Milking Shorthorns

Chas L. Weaver, Tulare, was the only exhibitor in this class and was awarded all ribbons.

Ayrshires

E. B. McFarland, San Mateo, had all classes filled in the Ayrshire division.

Jerseys

A. A. Jenkins and W. H. Beekey, Tulare, had the Jersey classes filled, most of the ribbons being won by Jenkins.

BEEF CATTLE

The Herefords owned by Romie C. Jacks of Monterey and shown at Sacramento last week, took practically all awards in the beef cattle classes.

SWINE

The hog exhibit was one of the outstanding features of the fair. With very few exceptions, every hog on the grounds had been among those shown at the state fair and most of them were from the heavy winning herds.

All awards were placed by V. F. Dolcini, Davis, in a very efficient manner.

The Durocs led in point of numbers, closely followed by Poland Chinas, with lighter shows of Berkshires, Hampshires and a few Tamworths.

The awards follow:

Duroc Jerseys

Aged boar—1, F. B. Ellis, Lindsay. 2, C. C. Ellis, Exeter. 3, Allen Thompson, Tulare.

Senior yearling boar — 1, Falfadale Farm, Perris. 2, J. P. Walker, Visalia.

Junior yearling boar—1, D. G. Cummins & Son, Visalia. 2, W. J. Fulgham & Sons, Visalia. 3, C. C. Ellis.

Senior boar pig—1 and 3, Fulgham & Sons. 2, Falfadale Farm.

Junior boar pig—1, J. P. Walker. 2 and 3, Falfadale Farm.

Senior yearling sow—1, J. P. Walker. 2, Cummins & Son. 3, Allen Thompson.

Junior yearling sow—1, Falfadale Farm. 2, Allen Thompson. 3, Jos. Chenowith, Visalia.

Senior sow pig—1, Falfadale Farm. 2 and 3, Cummins & Son.

Junior sow pig—1, Sargent Bros., Tulare. 2, J. P. Walker. 3, Falfadale Farm.

Get of sire—1, J. P. Walker. 2, Falfadale Farm. 3, Sargent Bros.

Produce of sow—1, Falfadale Farm. 2, Sargent Bros. 3, F. B. Ellis.

Aged herd — 1, Falfadale Farm. 2, Allen Thompson.

Young herd—1, Falfadale Farm. 2, Sargent Bros. 3, D. G. Cummins & Son.

Junior champion boar—J. P. Walker.

Senior and grand champion boar—Falfadale Farm.

Junior champion sow—Falfadale Farm.

Senior and grand champion sow—J. P. Walker.

Duroc-Jersey Futurity

Junior boar pigs—1 and 2, J. P. Walker. 3 and 4, F. B. Ellis. 5, J. E. Martin.

Junior sow pigs—1, J. P. Walker. 2 and 3, F. B. Ellis. 4 and 5, J. E. Martin.

Junior litters—1, F. B. Ellis. 2, J. E. Martin. 3, F. B. Ellis. 4, Cummins & Son. 5, C. C. Ellis.

Poland Chinas

Aged boar—1, Shinn & Elliott, Tulare.

Senior yearling—1, R. F. Guerin & Son, Tulare. 2, Roy Saunders, Tulare.

Junior yearling—1, W. E. Martin, Tulare. 2, Kern County Union High School.

Senior boar pig—1, A. J. Elliott, Tulare. 2 and 3, H. G. Ball, Tulare.

Junior boar pig—1 and 2, A. J. Elliott. 3, Bassett Bros., Hanford.

Aged sow—1 and 2, H. C. Shinn, Tulare. 3, A. J. Elliott.

Senior yearling—1, A. J. Elliott. 2, H. G. Ball.

Junior yearling—1, A. J. Elliott. 2 and 3, H. C. Shinn.

Senior sow pig—1, H. C. Shinn. 2, Bassett Bros. 3, A. J. Elliott.

Junior sow pig—1 and 2, A. J. Elliott. 3, Bassett Bros.

Aged herd—1, A. J. Elliott.

Young herd—1 and 2, A. J. Elliott. 3, H. C. Shinn.

Get of sire—1, H. C. Shinn. 2, A. J. Elliott. 3, Bassett Bros.

Produce of dam—1, H. C. Shinn. 2, A. J. Elliott. 3, Bassett Bros.

Junior champion boar—A. J. Elliott.

Senior and grand champion boar—Shinn & Elliott.

Junior champion sow—H. C. Shinn.

Senior and grand champion sow—H. C. Shinn.

Poland China Futurity

Junior litters—1, A. J. Elliott. 2, Hugh C. Shinn. 3, Bassett Bros. 4, John Hahesy, Jr. 5, Merle Soultz, Tulare. 6, Chas. Weaver, Tulare. 7, Paul Sheppa, Tulare.

Berkshires

All Berkshire awards to D. J. Bastanchury, La Habra.

Hampshires

Earl Sandusky, Los Angeles, had the only Hampshires on the grounds.

SHEEP

While the exhibit of sheep was small, the class of those shown was of high order. The Corriedale Sheep Co., Hollister, had exhibits of Corriedales, Leicesters, Southdowns and Shropshires. All awards were won by the above named firm.

One of the features of the Los Angeles Livestock Show will be the model dairy of the Joy-Reams Co. This will be in charge of L. A. Taylor. All of the milk taken at the fair will be skimmed with the Sharples cream separator, as a free service to dairymen at the show and to demonstrate the electrically driven Sharples suction feed separators which, because of the centrifugal action of suction, skim the milk clean at any speed.

Among the James J. Jeffries entries at the Los Angeles Livestock Show may be seen fine strings of sons and daughters of the great show bull King Segis Pontiac Jannek.

Morris C. Allen, manager of Winsor Ranch, Bonita, is exhibiting 20 Durocs at the Los Angeles Livestock Show, with Winsor's Giant Orion at head.

Sir Veeman Korndyke Pontiac, sire at Burr Farm, Los Angeles, now has 13 A. R. O. daughters to his credit.

Mendocino Apple Show, Ukiah, October 27-30.
Western Royal Livestock Show, Spokane, Washington, November 1-5, Secretary Bert L. Hilborn.
Arizona State Fair, Phoenix, November 8-13, Secretary Shirley Christy.
Pacific International Livestock Show, Portland, Oregon, November 15-19.

blood, but with easy feeding quality as the prime consideration.

A. V. Austin, Van Nuys, is specializing in high class Durocs. At Owensmouth he showed the fine brood sow Aneeda Model Queen, winning second in strong class. She has raised ten fine pigs got by California Orion Cherry King, and is now bred for early October farrow to Top Sensation 1st.

It is no secret that pork prices are "looking up" somewhat the last few weeks. In the light of this fact the Berkshire interests of the south end of the state are taking the opportunity to bring before the buying public on Thursday, October 7, a nice clean cut offering of registered bred sows and gilts. The sale will be made at Exposition Park, following the judging in the swine section. Thirty-five head will be catalogued, and it will be good herd building material, start to finish. Twenty-five bred sows, ten open gilts.

As manager of the swine department of the Ed R. Maier Berkshire breeding ranch at Santa Susana, J. E. McIntosh brought a string of prize winning young hogs to the Owensmouth show. Escalon May Star was made grand champion of the show, while Escalon Type 2d won first as senior yearling. The Maier herd is one to be reckoned with in future shows.

On October 27 at the Lookingbill yards in Pomona, 50 head of registered Poland Chinas will be auctioned. They are consigned by Newton & Christiansen. The Christiansen herd in 1916 won seven firsts, one grand champion and two champions; in 1919, three firsts, four seconds, one grand champion and one champion. The Newton herd was in the money at Owensmouth this year.

All the Cream At All Speeds

Every member of the family turns the separator handle at a different rate. And, no one turns always at the exact speed stamped upon the crank,—it simply can't be done.

Your present separator, unless a suction-feed, has a constant inflow of milk. Whenever the speed falls, a lot of cream slips away through the milk-spout and is lost forever. Experts estimate that most farmers lose from 7 to 13 lbs. of butter yearly from each cow because they turn their separators below speed. You are, no doubt, one of the losers and very likely a heavy loser. But you can stop this loss right now by using

Only three pieces to wash. Not one of them fussy.

THE NEW SHARPLES SUCTION-FEED

Separator. This wonderful machine automatically regulates the inflow of milk in exact proportion to the skimming force. It gets all the cream at all speeds.

Father can "speed up" the crank to 55 revolutions a minute and finish the chore quickly. Mother or the girls can turn at a leisurely rate. Fast or slow, the Suction-feed Separator skims absolutely clean and delivers cream of uniform density—not thick today and thin tomorrow. It's the only separator having these valuable features.

The slender Tubular bowl gives double skimming force. It's the only bowl containing no discs or blades. There's just one piece in it—a single small cone, as simple and easy to clean as a napkin ring.

The New Sharples is ruggedly built for hard service. It is neat, compact, runs easily and oils itself.

There are many other exclusive and important features to be found in the New Sharples Suction-feed Separator. Come in and let us show you. Bring the women folks, too. We'll be glad to see you all.

FANNIE'S ORION KING

heads our select string of Duroc brood sows. At the recent Los Angeles County sales we personally selected two high class yearling sows (Pathfinder and Great Sensation blood direct), mated for September litters to the Winsor Ranch big-type boars. They find good company at our ranch.

C. C. ELLIS

EXETER, CAL.

THE LOS ANGELES LIVESTOCK SHOW

(Continued from page 427)

Regardless of the particular line of primary production in which we happen to be engaged, our own individual prosperity bears an intimate relation to the livestock industry. We are beginning to appreciate the fact that though blessed with most favorable conditions of production we cannot continue lavishly spending our soil resources without sooner or later reaching the point where a bountiful nature will call us for an accounting. We know, too, those of us who have given the matter thought, that the one sure way to conserve the productivity of our soil is through the maintenance of livestock.

Again, those of us who are primarily interested at present in handling livestock realize that changing conditions affecting production costs are such that some method must be found to widen the margin between those costs and the selling prices. It makes no difference whether we are running cattle or sheep on the ranges, maintaining dairy cattle or hogs on our more fertile valley lands, the situation is the same—our profits will depend upon the margin between production costs and selling prices. It is quite impossible to study our agricultural problems and escape an understanding of the real, bedrock importance of livestock production.

The Los Angeles Livestock Show was brought into existence three years ago by a group of big, broad gauge men who appreciated the actual importance of livestock in our general scheme of agriculture, who felt that one of the greatest services they could render the state was to assist in some plan to encourage a wider adaptation of livestock to Southern California agriculture, and who came to the decision that a livestock show would best serve to awaken a "livestock consciousness" among our people.

Livestock shows and fairs are two of the most potent factors in stimulating a better livestock industry. Through such fairs and shows the accumulated and final accomplishments of the breeding art can be placed before the general public in such a manner as to lend inspiration and encouragement to all. Such exhibitions provide an opportunity for all to gain a correct conception of modern breed standards, for it is through such shows that our standards are established. The man engaged in the handling of ordinary or scrub livestock can see wherein the modern pure bred's value rests. The breeders themselves can meet on the common ground of the judging arena and measure the quality of their productions with the productions of their fellow breeders.

The man about to enter the livestock business can use the show as a chart by which to order his contemplated operations. He can compare the merits of the different herds and flocks and become acquainted with the leading lights of the livestock world. Such acquaintance is most valuable for the reason that much knowledge of successful methods can be gained through personal and intimate contact.

The parents of boys and girls should not fail to take advantage of the opportunity such shows afford to impress on the children of today the economic importance and the dignity of animal husbandry, bearing in mind that the children of today are the producers of tomorrow and that early impressions are most apt to be lasting impressions.

The forthcoming show represents

the highest effort yet made to put before the people of Southern California a complete exposition of the livestock industry. The directors of the show have made their plans on an ambitious scale and without other thought than that the show will be accorded the hearty support of the community it seeks to serve. The show has not been planned or executed with the one idea of furnishing the breeders a place to display their works—that feature is but an incident—but rather as an institution where the entire agricultural fraternity can catch the inspiration that comes from association with improved livestock—and knowing full well that such inspiration is reflected in better homes, better ranches, better communities, better men and women—in short, a higher and more contented citizenship.

The stage is set. Your show is ready for you, and you are expected.

STOCK SHOW NOTES

The educational features of the Los Angeles Livestock Show have been the direct cause of interesting numerous people financially able to develop large stock raising projects and thereby add to the wealth of the Pacific Coast. The two preceding stock shows were a revelation to thousands of visitors from the East.

* * *

Premium lists offer \$7,500, with sweepstakes of \$100 and \$500 in the daily afternoon horse show. The performances will be viewed from a specially built grandstand seating 1,000 persons within the Exposition grounds.

* * *

In its staple uses mohair is putting the silk worm off the mulberry tree. Most of the "silk" you buy now is made from mohair. The finest plushes, cloak goods, and expensive "silk" rugs are also made from mohair. There is promise of an exhibit of Angoras at the fair.

* * *

The Los Angeles Livestock Show opens today with upward of 2,000 pure bred animals entered in competition, filling every stall and pen in the 25 commodious new buildings at the California state exposition grounds here. Thousands of livestock enthusiasts and spectators are on hand for the opening events. A record attendance is expected during the nine days. The gates will be open from 8 a. m. until 9 p. m., daily.

* * *

Besides the great livestock displays and parades there will be dairy exhibits showing the food value of milk and the benefits derived from cow testing staged by the California Dairy Council and the farm bureau.

* * *

The Exposition Park Kennel Club, Jack Bradshaw, manager, will hold its second annual championship dog show October 3 and 4. Five hundred foremost Western dogs are expected. More than 125 valuable cups and trophies are offered.

* * *

Manager E. I. Hammond of the poultry, rabbit and pigeon show announces that entries will be received October 4. Judging will begin Wednesday, October 5, and displays may remain in place until October 10, closing day. More than 200 exhibitors have already made entries.

* * *

On Saturday, October 10, closing day of the show, will be staged Southern California's Bathing Girl Revue, spectacular daily rodeo, racing and horse show events and grand march of prize winners.

Packers Pinching Pennies on Pork Prices

By R. P. Royce

ON the closing Saturday of the state fair an auction for the sale of fat hogs had been arranged by the Sacramento County farm bureau in conjunction with the California Farm Bureau Marketing Association. It was expected that the event would prove of high educational value to fair visitors and would result in improving the general quality of California pork. The sale was held on schedule. Over 350 head of hogs were offered and the event did prove of high edu-

cational value; however, it is doubtful if the sale will result in improving the quality of the hogs in the Sacramento Valley.

For a good many years the packing interests of this state claimed that the hogs reaching their killing floors were of poor grade, lacked finish, were soft and oily and low dressers, so that they could not handle them on a price basis comparable to cornbelt quotations. Therefore their "quotations" ruled from two to five cents under Eastern figures.

"Most assuredly," they blandly remarked, "we will be glad to pay a better price whenever the California rancher sends us hogs showing quality, uniformity and a hard finish. Further, the various agencies interested in improving the quality of California hogs will have our support, moral and otherwise, and we will set a premium on quality."

The producers took the packers at their word and there can be no doubt that during the last three or four years the average quality of our hogs has shown a very definite improvement. We are producing better hogs and feeding them out more acceptably.

Then came the auction method of selling. The auction plan was developed with the idea of securing a better price for hogs produced by the small operator through combining shipments and grading the various lots on a basis of quality. All admit that this system of marketing leaves much to be desired and that it is a trifle too cumbersome to be stable, but it is the best plan to meet present conditions. So far the packers have been disposed to tolerate the auction and have usually made an effort to have their buyers in attendance. On a good many occasions it has seemed that the packers went to considerable length to pay exceptionally strong prices, but so long as no one has ever accused the packers of philanthropy it can be assumed that they "got out all right" on their buying.

Now when the state fair sale was proposed, all the packers were notified. Surely, it was thought, they would be on hand at Sacramento, as it was known that many hogs entered in the show would be consigned to the sale. The sale would furnish them an opportunity to select hogs of the right quality—the sorts they had professed to want.

What happened? Out of the whole bunch who were notified only two or three buyers showed at the opening of the sale. It is known that others were on the grounds. The sale was opened. The hogs had been graded. Not all were prime hogs, but the tops were good. One carload consisted of purebreds of one breed, uniform, and inasmuch as they had been fed by one of the master feeders of this state and had been awarded a prize in the show, it can be inferred that they were finished—but they were not; they were "finished" later when a packer-buyer bought them 80 cents under a mixed lot that lacked the finish—and the excuse offered was to the effect that they were "too heavy." They averaged 248 pounds. Ye gods and little fishes! What a fine commentary on the pork packing business of California when our packers cannot handle to advantage one carload of 248 pound porkers of quality and finish! Of course there is a slight basis for favoring the lighter weights, but most of this talk about 250 pound hogs being "too heavy" is pure bunk that is used to replace the worn out arguments of a few years back.

But, be that as it may, the judgment of the buyers fell several points in the estimation of the crowd about the sale ring.

And furthermore, the packers of this state, following the old fashioned square headed policy of "getting while the getting is good," could not have picked a more unfavorable time to demonstrate their thick headedness. Instead of using the event at the state fair to encourage the production of a better sort of killing hog and thereby contributing something to the cause of better livestock, they went on record as being unwilling to "play the game" unless there was an immediate profit in sight and demonstrated that they care nothing as to whether or not our ranchers adopt better bred livestock.

Oh, well, times will change; they are changing now, but apparently our coast packers haven't seen the light.

DUROC JUNIOR CHAMPION

Regarding the published list of awards at the state fair, we have the following letter from W. T. Hollingshead & Sons:

"In looking over the report of the state fair awards I noticed that the junior champion Duroc-Jersey boar was not mentioned. The junior champion was the first prize junior boar pig, High Sensation, bred and shown by W. T. Hollingshead & Sons, Orland.

OLYMPIC

HOG FEED

Fortune Versus Foresight

A FORTUNATE turn of the market is only a secondary consideration when anticipating returns from your hogs. Profits are determined largely by the cost of raising the hogs.

OLYMPIC Hog Feed will build pork at the lowest cost per pound. It is a palatable ration and a productive one; not a mere jumble of proteins, but a scientifically blended ration.

OLYMPIC Hog Feed contains properly balanced proportions of Flour Middlings, Corn Feed Meal, Linseed Oil Meal, Soybean Meal, Ground Barley, Digester Tankage, Salt and DRIED BUTTERMILK.

The DRIED BUTTERMILK is a most important element in **OLYMPIC** Hog Feed. It supplies the important food values necessary to insure the very maximum digestion and assimilation of all other ingredients. It makes a better feed the *best* feed obtainable.

SECOND PUBLIC SALE

Caledonia Farms' SHORTHORNS

(AT THE FARMS)

West Sacramento, Cal.

Tuesday, October 26

60 Registered Shorthorns

50 FEMALES

There have been selected for this sale 50 extremely desirable females that are in every way up to the high standard of former offerings. As a whole they are characterized by their splendid type, scale, thickness and quality. They offer real proof of the beef making qualities of the Shorthorn as all have reached their maturity under most practical conditions. All are exceptionally well bred and include many of the most popular American and Scotch tribes. Fifteen of the cows sell with calves at foot and all will carry the service of the great trio of Caledonia bulls—

Imp. Caledonia Gainford Matchless
Pine Grove King
 (No western herd can boast of three such great sires)

20 HEIFERS

Included in the females offered are 20 very attractive heifers of our own breeding that will be well along in calf to the service of the above named bulls. No recent sale of Shorthorns has afforded breeders and beginners such an opportunity to add well bred young things to their herds. They will grow in value for years to come.

10 BULLS

The ten bulls are all young fellows—12 to 18 months old. Several of them are excellent prospects for herd bulls and the balance are very high class range bulls. At least half of them are Scotch. All are good colors and are strong, well developed, heavy boned youngsters. This sale is the bull opportunity of the year.

Watch this paper for further details—and remember that this sale will be the last Shorthorn sale to be held in this state this year.

20 Shorthorn Range Bulls

Private Sale

Range operators who are in the market for bulls are invited to see the carload of Shorthorn bulls that I will have on exhibit at the

Los Angeles Livestock Show

Included in the lot are twenty head of well bred, growthy, heavy boned bulls that have been selected with particular regard to the demand from cattlemen who believe in the better kind of bulls. All are either reds or roans, 10 to 15 months old, and about half of the offering are of Scotch breeding.

I will be glad to meet any cattlemen interested and I feel certain that I can please in quality and price.

Allana Farms Holstein Dispersal

The entire herd of Holsteins owned by J. P. Phillips, with the exception of five head entered in the National Sale, Allana Farms, Dixon, was dispersed at the home place, September 23, and the feature of the auction was the sale of the herd bull, Sir Pietertje Korndyke Ormsby, for \$3,200. This bull, the first son of the noted Sir Pietertje Ormsby Mercedes to be sold in the West, was purchased by J. E. Dugan, who has been in charge of the Allana herd. It is understood that the bull is to be taken East, where Mr. Dugan will associate himself with one of the large herds located in the section where the breeding represented by his bull is held in high esteem. There were several California buyers who were interested in the bull and S. O. Walker of Visalia and a representative of the McCloud River Lumber Co., McCloud, were the runners up.

While the general average of \$310 was considered a conservative valuation, it was likewise thought to represent fair values in view of the fact that few of the cattle had attractive records and a large proportion of the sale consisted of young things.

R. L. Holmes of Modesto was the most extensive buyer and maintained his reputation for critical buying. He secured the top female, Aaggie Niko Alka, with a three year old record of 21.18 pounds butter in seven days. A particularly good buy made by Holmes was the securing of the four granddaughters of Duchess Skylark Ormsby.

G. M. Brown of Burr Farm, Los Angeles, was a strong supporter of

Full account of Kings County fair at Hanford, written by J. P. Bennett, will appear in next issue.

the sale and selected six of the more desirable females. Owen Duffy of the Napa State Hospital, Napa, took three of the younger bulls and two attractive cows. Sixteen buyers absorbed the 41 head offered.

The sale was held under the management of the California Breeders Sales and Pedigree Company, Sacramento. Ben A. Rhoades of Los Angeles was the auctioneer and was assisted in the ring by Geo. W. Bell of Tulare.

The list of sales follows:

BULLS

1. Sir Pietertje Korndyke Ormsby, Oct. 1915; J. E. Dugan, Dixon, \$3,200.
2. Sir Pietertje Niko Ormsby, S. O. Walker, Visalia, \$100.
3. Unnamed out of Fern Reinschje Ormsby, Napa State Hospital, Napa, \$80.
4. Unnamed out of Dean Forest Ormsby Mercedes, James McGillivray, Sacramento, \$160.
5. Unnamed out of Jewel Beets Banostine, Napa State Hospital, \$120.
6. Unnamed out of Faribo Pontiac Ormsby, Napa State Hospital, \$170.
7. Admiral Pietertje Mechtide, Oct. 1919; S. O. Walker, \$450.
8. Unnamed out of Kathleen De Kol Burke, M. Borba, Dixon, \$50.

FEMALES

1. Miss Freckles Ormsby Hengerveld, Jan. 1920; R. L. Holmes, Modesto, \$310.
2. Belle Pietertje Johanna Ormsby, Nov. 1914; L. N. Irwin, Davis, \$80.
3. Pleasant View Freckles, Apr. 1913, 20.83 lbs.; Burr Farm, Los Angeles, \$360.
4. Dean Forest Mercedes De Kol, 2d, Oct. 1915; Napa State Hospital, \$260.
5. Dean Forest Ormsby Mercedes, Feb. 1918; M. Borba, \$90.
6. Aaggie Niko Alka, June 1916, 21.18 lbs.; R. L. Holmes, \$650.
7. Miss Aaggie Ormsby Korndyke, Jan. 1919; R. L. Holmes, \$175.
8. Queen Ormsby Segis Butter Girl, Oct. 1918; Napa State Hospital, \$300.
9. Miss Claire Pietertje Ormsby, April 1919; H. E. Spires, Caruthers, \$270.
10. Queen Niko Pietertje, Apr. 1916, 19.04 lbs.; R. L. Holmes, \$400.
11. Betty Beets Banostine, Jan. 1917; H. V. Greenwood, Vallejo, \$95.
12. Unnamed helper calf out of Betty Beets Banostine, R. L. Holmes, \$285.
13. Ollie Watson Homestead Hengerveld, Dec. 1911; Manuel Perry, Dixon, \$85.
14. Duchess Banostine Butter Mald, Nov. 1916; C. W. Stock, Fernley, Nev., \$265.
15. Woodville Johanna Segis, Jan. 1918, 11.70 lbs.; Burr Farm, \$290.
16. Faribo Pontiac Ormsby, Nov. 1917, 14.51 lbs.; Burr Farm, \$400.
17. Fern Reinschje Ormsby, June 1917; C. W. Stock, \$265.
18. Miss Faribo Ormsby, Jan. 1918; Burr Farm, \$275.
19. Unnamed helper calf out of Francie Evergreen Colantha De Kol, R. L. Holmes, \$285.
20. Unnamed helper calf out of Jessie Omega Banostine Beets, R. L. Holmes, \$205.
21. Cleopatra Ignaro De Kol, Nov. 1911, 20.16 lbs.; A. P. Dutra, Dixon, \$210.
22. Pleasant View Johanna Aaggie, Nov. 1910, 645.88 lbs.; R. L. Holmes, \$175.
23. Queen Mechtide Colantha Pontiac, Sept. 1918; R. L. Holmes, \$160.
24. Frances Evergreen Colantha De Kol, Apr. 1916; C. W. Stock, \$185.
25. Woodville Princess, Feb. 1918; Burr Farm, \$295.
26. Mutal De Kol Segis Butter Girl, Aug. 1916; H. E. Frost, Elmira, \$250.
27. Golden Valley Ester Ormsby, Nov. 1917; H. J. Long, Fallon, Nev., \$235.
28. Marie Princess Banostine, Nov. 1916; A. P. Dutra, \$295.
29. Golden Valley Tressa Ormsby, Dec. 1917; Burr Farm, \$380.
30. Kathleen De Kol Burke, July 1915; C. W. Stock, \$230.
31. Miss Cleopatra Korndyke Ormsby, June, 1920; C. W. Stock, \$115.
32. Unnamed helper calf out of Pleasant View Johanna Aaggie; R. L. Holmes, \$370.

SOUTHERN CALIFORNIA FAIR

Lovers of fine stock are looking forward with a great deal of interest to the Southern California fair to be held October 13 to 19 at Riverside. While there will be a large number of prominent breeders exhibiting from various parts of the state, and some from Eastern states, there will be one feature at Riverside seldom seen at a fair of its magnitude, and that is the large number of small breeders, beginners in the livestock game, who will show their product at this farmers fair. It has been the consistent policy of the management of the Southern California fair to encourage the small breeder, and the results of this policy are already apparent. A number of those who exhibited for the first time last year have made their entries this year with increased herds, and the entry list already shows a considerable number of breeders of blooded stock who have never before made an exhibit. The fair management considers this a healthy indication of the progress of the pure bred stock industry, and also an endorsement of their policy with relation to the small breeder.

The poultry show will be a notable event. The cooping of this exhibit will be a demonstration of poultry showmanship and the very best birds of the best breeds in the West will be on exhibit. There will be a fine display of bantams, and also a large and attractive pigeon show. In connection with the poultry show the home demonstration department of the farm bureau has secured the assistance of specialists and will give daily demonstrations in poultry raising.

CATTLEMEN'S CONFERENCE

Secretary Stollery of the California Cattlemen's Association proposes a meeting to be held in Salt Lake City, October 28, 29 and 30, to talk over matters of interest to members of the association. Mr. Stollery hopes for delegates to be present from all states west of Montana and New Mexico. He suggests that this conference discuss and take action upon the following subjects:

A plan of action whereby the seasonal surplus supply of cattle from the various states can be gauged.

The preparation of a schedule by which a more steady supply of cattle would enter the various Eastern and Middle Western markets.

National legislation matters pertaining particularly to federal financial aid.

Enactment of state or federal legislation toward the eradication of tuberculosis in range cattle and the elimination of tubercular cattle entering our markets.

Action tending to withhold from prime cattle markets half fat cattle and feeders.

Prevention of glutting other states with feeders.

A closer cooperation between the state associations with respect to feed and other conditions.

Effort to reestablish the branch offices of the U. S. bureau of markets.

Policy of a campaign having as its object stimulation of beef consumption.

THREE BIG HEREFORD DAYS STATE FAIR GROUNDS, SACRAMENTO, CAL.

Are you going to get in on the ground floor with HEREFORDS? Through sheer merit this breed has forged ahead steadily in California and other western states, and this year for the first time, in the biggest beef cattle show ever staged at Sacramento, HEREFORDS outnumbered any other beef breed. There's a real reason for this increasing popularity, and it is measured by a dollars and cents standard. The three public sales listed below are full of opportunities to buy real breeding HEREFORDS.

Thursday, November 4

45—Registered Herefords—45

This is the regular fall offering of picked tops, known more popularly as the "Association Sale." Hereford breeders all over the coast have been striving constantly toward the improvement of their herds, and it is only natural to expect advancement in quality in each succeeding sale of picked cattle.

Foremost herds of the west will be represented in this sale, and the buyer who wants to add one or more extra choice animals to his herd, or the beginner who wants to start with that sort of foundation will find ample range of selection in this offering.

Sale under auspices of

PACIFIC COAST HEREFORD CATTLE BREEDERS ASSOCIATION

J. I. Cazier, Pres., Wells, Nevada. J. A. Bunting, Sec., Mission San Jose, Calif.

Friday, November 5

NEVADA HEREFORD RANCH

WILL SELL

55—Registered Herefords—55

Beau Blanchard 76th

HARRIS STANDARD 2ND is as well bred as any bull in the United States and is a wonderful sire. Our show herd for the past three years has shown some evidence of his breeding ability, but to be fully appreciated you must see the uniform excellence of his entire get on our ranch. His get have never been defeated in the Get of Sire class.

IN THIS SALE we will sell over 30 heifers sired by him, and many of them are safe in calf to BEAU BLANCHARD 76TH. Others will be bred to ABE MISCHIEF, by Mousel's mighty Beau Mischief, and to BOCALDO 21ST, by Hazlett's Grand Champion, Bocaldo 6th.

This is the first individual public sale offering made by NEVADA HEREFORD RANCH, and we believe the quality of the offering to be a credit to this herd, and one in which the buyer may rightly expect to secure correct breeding animals.

This herd is widely known as one of the largest and most richly bred collections of the breed in the west. Especial attention has always been given to the maintenance of a healthy herd, and this herd is now in line for Federal accreditation.

At 1920 California State Fair, BEAU BLANCHARD 76TH was Grand Champion in the greatest Hereford Show ever staged at Sacramento, and his young son PILOT, out of a Harris Standard 2nd dam, owned and exhibited by Wm. Briggs, Dixon, was first junior bull calf and Junior Champion.

Four of the first calves sired by BEAU BLANCHARD 76TH, and out of Harris Standard 2nd dams, bid well for high honors in the individual classes, and in the Get of Sire group stood second only to the get of Harris Standard 2nd. Remember that in this sale a large number of HARRIS STANDARD 2ND heifers sell bred to BEAU BLANCHARD 76TH.

Harris Standard 2nd

Owners:

J. H. CAZIER & SONS CO., WELLS, NEVADA.
Otis Cordell, Herdsman

Saturday, November 6

50—Registered Herefords—50

This offering rounds out the greatest Hereford selling event yet attempted in the breed's affairs in the west, and fits into the three days offerings especially well.

There will be a liberal number of cows, practically all young, and a number of them with calves at foot by richly bred sires. The cows themselves represent some of the most highly approved Hereford families and may well be rated as desirable breeding females of great usefulness.

The offering contains an especially interesting lot of heifers of substantial breeding, the sort that promise to develop into desirable and profitable breeding matrons.

Owners:

BARNGROVER & WRIGHT, SANTA CLARA, CALIF.

Every animal in the three offerings listed above is positively guaranteed to be a breeder; every animal over six months old tuberculin tested and individual certificates furnished.

For catalog of any or all sales, write the management.

TOYON FARM ASSOCIATION

WILL SELL AT PUBLIC AUCTION

150 Registered Holsteins 150

November 10-11, 1920

State Fair Grounds, Sacramento, Cal.

The herds of Toyon Farm Association, Los Altos and San Francisco, are to be consolidated into one big herd on their Brentwood Farm. The herds now total approximately 350 head, and for the present the owners plan to carry only about 200 head, hence the sale of 150 head at this time.

100 Milk Cows in This Sale

Their first individual offering will include approximately 100 head of cows and heifers in milk, of splendid type and breeding, many with large official records and out of high record dams. There will also be about 30 bred and open heifers, and about 20 bulls in the sale.

Females Bred to High Record Bulls

The females in this sale are bred to SIR PIETERIE ORMSBY MERCEDES 43RD, son of Sir Pieterie Ormsby Mercedes and Aaggie Wayne Peep, whose yearly records for five years exceed the total of any other cow; SIR AAGGIE MEAD, son of Sir Aaggie De Kol Acme out of a 1200 lbs. daughter of the 1142 lb. cow Aralla De Kol; a son of the 33 lb. cow Bonnie Lass Pauline; and a 30 lb. son of Johanna Bonheur Champion.

A Healthy Lot of Unblemished Cattle

In this entire offering there are only three cows with blemished udders; no female of breeding age will be offered unless she is believed to be safe in calf; every animal is positively guaranteed to be a breeder; EVERY ANIMAL IS TUBERCULIN TESTED BY A FEDERAL VETERINARIAN AND SOLD SUBJECT TO RETEST BY THE BUYER.

Dispersal Sale

67 REGISTERED HOLSTEINS 67

Kounias Registered Stock Farms

Modesto, California

Thursday, October 28, 1920

This offering will contain the highest record cows ever offered in a public sale in Stanislaus County, substantially bred, and practically all young.

There will also be a choice selection of bred and open heifers and heifer calves of good type and breeding.

The list of bulls affords selection of high quality and breeding for dairymen, and a few of registered herd heading caliber, including the herd sire KING KORNDYKE AAGGIE FAYNE, whose dam is a 33 lb. daughter of King Hengerveld Aaggie Fayne; a choice young son of the famous Hollywood Farm sire, JUDGE SEGIS, out of a 21 lb. daughter of Forward Prince Segis, her dam a 31 lb. daughter of Sir Skylark Ormsby Hengerveld that made 1127.27 lbs. butter in one year; and many others of excellent breeding.

Every animal positively guaranteed to be a breeder; every animal tuberculin tested and sold subject to retest by the buyer except as announced at sale.

San Diego County Farm Bureau Fair

By Robt. R. McLean

THE second annual San Diego County Farm Bureau fair opened September 22 under almost ideal conditions as to weather and location. It was held in the beautiful Exposition grounds in San Diego, four of the large buildings and much out of doors space being necessary to accommodate exhibits and concessions. A record breaking crowd was in attendance during the first two days and at the time this is written, the third day of the fair, it appears that the records of last year will be greatly exceeded. An attendance of 50,000 is probable, as against 33,000 last year.

Many unexpected and attractive features have been added for this fair and appreciative crowds have ranged through the buildings, down the concessions and around the livestock pens from morning till night. An automobile show has been staged in one building where everything from a Ford to a Renault is on display. An exhibit has been put on by the Honey Producers Association in connection with the county bee inspection service, a large screened cage being used to demonstrate the actual handling of bees. Fine educational exhibits are shown by the U. S. navy, U. S. weather bureau, Parent-Teachers Association, Women's Federated Clubs, this latter including a nursery and baby testing clinic, the Red Cross, Y. M. C. A., Y. W. C. A., county library, county horticultural commission and others.

An unusually fine poultry and rabbit display is on exhibition, introducing, among other things, a new breed of chickens, a cross between the Orpingtons and Rhode Island Reds. The hog exhibit is the best ever shown in this part of the state, including the Winsor Duroc-Jerseys, the county farm Berkshires, the Johnson Bros. Poland Chinas, the Canfield Estate Hampshires and the Monte Vista Tamworths. A fine exhibit of hogs was also brought in by the Boys Pig Club of the Grossmont Union High School.

The beef and dairy cattle industry is also well represented by giant Herefords from the Viejas ranch of D. H. Ogden, including the enormous bull Cal Rupert, Aberdeen-Angus cattle from the Lilac Ranch at Escondido, Guernseys from the Edgemoor, Cox and Winsor ranches, Holsteins from the Drinkwater and Learn ranches at Santee and Jerseys from a number of well known ranches.

Sheep are represented by Rambouillets and Cotswolds from the Galloway and Bond herds, some especially fine rams being shown. A large goat exhibit is housed in a specially constructed place and the number of visitors hurrying to this part of the fair proves the increasing interest in goats, many fine Toggenburgs, Saanens and Anglo-Nubians being in evidence.

Some very fine saddle horses were entered by the Medd and Brodie ranches of Alpine and Palm City, as well as cow ponies and untrained polo ponies by R. E. Bushnell of Mesa Grande.

The farm home department of the farm bureau and the farm bureau centers are especially well represented, the community exhibits far surpassing those of last year in quality and novelty of design. A drying demonstration of fruits and vegetables is held by the home department every morning and a cold pack canning demonstration every afternoon, attracting large crowds of interested women. One of the most interesting of the demonstrations given by Miss Fleda E. Smith, the San Diego county agent, has proven to be the dress form demonstration, illustrating the making and use of individual dress forms.

The canning contest between the farm home centers was very close, there being only 3½ points between the first and fourth prizes. The El Cajon home center won with 87½ points; Escondido was second with 87 points; Lakeside third with 84½ points and Jamul fourth with 84 points; Bonsall and Potrero were given fifth and sixth. There was such a general excellence in all the canned produce and fruit that the judges had a very difficult task deciding the winners.

The sack garment display attracted much attention and interest and was

of such character that Miss Eddy, state leader of home demonstration agents, requested that it be taken to the Farm Home Agents conference at Berkeley in October for exhibition there.

The general canning contest, open to all women in the county, brought many entries, and many fine jars were shown.

The exhibits of the farm bureau centers were planned and executed to bring out prominently the particular agricultural and horticultural activities of each. Poway, for instance, is famous for its quality peaches and grapes and the name "Poway" on the exhibit of this center is composed of Tokay and Cornichon grapes, with a background of Muscats and a border of Rose of Peru and Mission grapes. Several boxes of J. H. Hale peaches are on exhibition here, and for uniform size, color and quality seem to be absolutely perfect. A quantity of rust and smut proof number five macaroni hard wheat shown by this center represents 13 years work by the breeder, C. M. Stevens.

The Ramona district specializes in grain and chickens, some 28,000 sacks of barley, 5,000 sacks of oats and 3,000 sacks of wheat being produced here this year and \$42,000 worth of eggs during the first six months of the present year. The name "Ramona" on the exhibit is formed by photographs of White Leghorn chickens, the hens having unconsciously formed the letters while feeding, feed being scattered along the outlines of each letter to group them as desired.

El Cajon center came to the front with 184 different varieties of fruits on display, there being for instance, 25 varieties of grapes, 19 of apples and 16 of peaches. Seven varieties of cotton were also shown, these being grown on the Culbertson ranch under the direction of the Chula Vista experiment station. One of the contributors to the El Cajon community exhibit, D. J. Nelson, had 42 varieties of fruit alone on display, and another, John Ballantyne, 14 varieties of grapes.

Japatal Center, a mountain district where all fruits, grains and vegetables grown are unirrigated, has a remarkable showing of standard broom corn, amber and honey sorghum, some shown being 16 feet high, oats and Sudan grass eight feet high, as well as many fine fruits of various kinds. The Little ranch at Glen Lonely, occupied and improved only since the first of April, furnished 16 articles of fruit and grain that are in the community exhibit, while the Sly ranch supplied some extra fine quality unirrigated oranges, peaches and prunes. This center also has on exhibition a two months old mountain lion, captured in their valley only a few days ago.

A new center at Otay, organized a few weeks ago, made a very creditable showing of fruits, vegetables and nuts. Especially interesting is the Lima bean exhibit, as that is a comparatively new industry in this place. The Encinitas center, comprising Carlsbad, Olivenhain and Encinitas, made a background for their name on their exhibit by the clever use of grain, popcorn kernels, peas and beans, this being one of the finest winter vegetable growing sections in the state. Jamul center has a splendid exhibit of dry farming products, especially grains and fruits raised without irrigation. Many beautiful fruits, nuts and vegetables are shown in this booth. Lakeside center is represented by many fine fruits, vegetables and grains, among them being specimens of corn 16 feet, eight inches in height. Some fine cotton is also shown in this section. Bonsall center exhibits grains, beans and fruit, the varieties of beans shown being particularly interesting. Lemon Grove has a unique display of lemons, the American flag being formed with them, the stripes being represented by alternating rows of green and yellow fruit. Fallbrook center has a fine variety of products on exhibit, lemons, grains, peanuts, celery, tobacco and sorghum attracting particular notice. Vista, a grain and fruit center, is represented by a general exhibit of quality grains, vegetables and fruits. The Escondido center has an unusually attractive display.

A double fence row of corn was constructed across the front of the booth, the posts being represented by pumpkins. A legend hung on this fence reads "Guaranteed to Stop Any Hog." Corn and sunflowers 18 feet high are on exhibit here, beside a great quantity of fine grapes and other fruit.

As was the case with the home department canning contest, the farm bureau community contests ran very close, there being only 4½ points between first and fourth prizes. El Cajon was given first prize, Escondido second, Poway third, Japatul fourth and Jamul fifth, first prize being only eight-tenths of a point above second, and second but 1½ points ahead of third. The actual merit of the displays was very nearly equal and the difference in points was partly accounted for by the handicaps allowed for distance from San Diego.

Among the private exhibits those of Mrs. Lillian Ballantyne of El Cajon, showing many kinds of grapes, peaches, persimmons, apples and quinces, and the Juch ranch at Julian, specializing in apples, deserve special mention. A "statue" of County Supervisor "Uncle Joe" Foster, made by 16 year old Mabel Smith, is also exhibited by Mr. Juch, the clothing of this figure being formed of evaporated apples. The A. W. Johnson ranch of Lakeside exhibited some of the finest J. H. Hale peaches ever shown, some specimens weighing as much as 18 ounces.

One notable feature of the attendance is the very large number of out of town visitors, Eastern people, or those more or less recently from the East and Middle West. A rather amusing "bait" that revealed the Middle Western origin of many visitors was accidentally discovered by the First National Bank of San Diego, which has a prominent booth at the fair. A fine collection of papaws was presented to the bank by Prof. T. W. Dodd of Oceanside and placed on exhibition as more of a curiosity than anything else. First one visitor would make discovery of this fruit, then others, until literally hundreds in one afternoon had seen and admired it, by their exclamations and questions revealing the fact that papaws were familiar to their appetites and dear to memories of younger days in other states.

The judges for the agricultural and horticultural displays are Robt. M. Hodgson of Los Angeles, Dr. D. S. Fox of San Bernardino and E. L. Garthwait of El Centro, farm advisers for their respective counties, and for the livestock, G. E. Gordon of Los Angeles for goats, W. G. Waterhouse of Los Angeles, hogs; E. G. Teaney of Los Angeles, poultry; Lewis Salisbury of Pasadena, rabbits, and Prof. W. T. Skilling of San Diego, vegetables. The bee products exhibits were judged by C. O. Brenner, Jas. F. Kerr and J. S. Beermaker.

The success of this fair is largely due to the energy and enthusiasm brought into play by Farm Adviser France, Home Demonstration Agent Miss Fleda E. Smith and Manager of the Fair Ed Davidson. These officials were ably assisted by the executive committee, this committee being responsible for the actual development of the exhibits, raising the necessary money and looking after the many details that go to make an exhibition of this kind of such educational value as it should be. The executive committee are: Felix Landis, president; Ben F. Thorpe, vice-president; Morris C. Allen, secretary-treasurer; G. T. Drinkwater, A. E. Holloway, W. Barkley and R. R. McLean.

This fair will certainly be continued from year to year, and it is expected that the gate and concession receipts this year will create a sinking fund that will in a measure insure the future and continued success of any such enterprise.

UNCERTAIN

"Well, Mr. Pedagogue, does my boy show any special aptitude for work?" asked the proud father.

"I think so, Mr. Bronson," answered the schoolmaster. "I am not certain as yet whether John will make a sculptor or a baseball player. He is unerring in his aim with paper wads, but the condition of his desk top convinces me that he can carve with considerable facility."

Power in ALL Four Wheels

That means more Traction and less wasted Power. We can prove that, for the same horsepower, the FITCH FOUR DRIVE is the most economical tractor you can buy.

Gears all enclosed—immediate change to pulley easily made—built of best materials—strong and simple—burns kerosene or gaso-

line—has a front draw-bar hitch, which increases the traction with the load pulled.

There are real reasons why a FITCH FOUR DRIVE Tractor is the logical one to buy. Come to our exhibit at Glendale. Then, if you are interested, we'll demonstrate for you on your own farm or ranch.

H. B. Matthews, 1010 N. Madison Ave., Pasadena.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Settling Estate—Dairy

A dairy ranch is purchased in the name of father with understanding that son shall be partner, although there is no written agreement. Father executes mortgage on place and cows, then dies, leaving no will. Another son is appointed administrator, but the estate consists only of debts. Mortgagee forecloses and dairy and cows sold. Son who originally ran the place makes new agreement with purchaser to operate dairy. What becomes of the father's estate and how are its debts and expenses of administration to be paid? Can any of the heirs claim any interest in the dairy or its proceeds in case of its sale?—Subscriber, Los Angeles.

The creditors and heirs of the estate can look only to the assets of the estate for their fees or interest in any property of the estate. By the sale under the mortgage all interest of the estate in the dairy ceased and any interest which the son might acquire in the dairy is entirely outside of the interest as an heir in the estate, so that his relatives have no claim in the dairy or any of the proceeds thereof.

Fraud in Trade

I entered into a contract for the exchange of Eastern property for California property. The deed for the Eastern property was placed in escrow with instructions to deliver upon presentation of certificate of title showing the California property clear. Thereafter I ascertained the California property was worthless and had been grossly misrepresented to me. I ordered the escrow bank not to deliver the deed. I am now threatened with suit to fulfill the contract. What can be done?—Subscriber, Inglewood.

Fraud vitiates any contract. It will be necessary for the party seeking to enforce the contract to proceed

by a remedy in equity to enforce the specific performance, and unless he can show that the contract was in every way fair, reasonable and equitable, and the property here of substantial value, the court will undoubtedly refuse to decree a specific performance. Gross misrepresentations, such as were stated, would undoubtedly operate to bar any judgment against you.

Agreement Not Carried Out

Mother possessed several parcels of property, which was her separate property at the time she married. She left will providing that her husband should have the income as long as he lived and after his death the property should be equally divided among the four children. There were some incumbrances upon the property and the expenses of the administration to be paid. An arrangement was made whereby children should deed their interest to him, certain of the property be sold so as to pay the debts of administration, and then he was to deed back to the children share and share alike. The deed to him was made and he deeded to one son some of the property but refused to carry out agreement as regards the other three heirs. What action can be taken?—Subscriber, White Road.

Probable action would be to compel specific performance of the agreement, which was originally made to the effect that the property would be equally divided among the four heirs. Action should be brought immediately and notice of action filed so as to prevent any transfer of the property to innocent third persons.

Pipe Line Across Property

A pipe line runs straight through our grounds. We have water for domestic use but wish more for irrigation. Have we any right to use water from the pipe line?—Subscriber, Burbank.

The mere fact that a pipe line runs through property does not necessarily entitle the owner of the property to take water therefrom. That would depend upon whether the pipe line is owned by a public utility or not and various other matters.

Wife's Property

A ranch was purchased with personal funds by my wife and taken in her name. I have worked upon the ranch and improved it. In the event of my death could my children by a former marriage claim any interest in the property and would the wife have to prove that she paid for it in order to hold it against them?—Subscriber, Hollister.

The code provides that wherever any property is conveyed to a married woman by any instrument in writing, the presumption is that the title is thereby vested in her as her separate property. It would be necessary, therefore, for your children to show that it was not her separate property to prove any interest which you might have therein. In this respect they would meet a second presumption to the effect that where a husband performs services upon property standing in the wife's name such services were in the nature of a gift; that is to say, that there is never any presumption that the wife agrees to pay for the performance of such services. It would be necessary to establish any such interest that the party seeking so to establish it should very clearly make out a definite contract whereby the wife agreed to give such interest.

COMPETENT AT LAST

"How long has this reporter been on the staff?"

"Oh, long enough to become really useful as a news gatherer."

"What do you mean?"

"He has passed through the period of aspiring to write the 'Great American Novel,' or the 'Great American Play,' and is now able to concentrate on a police court item."

HOW WE NEED ONE!

"I've an invention at last that will mean a fortune!"

"What is it this time?"

"Why, it's an extra key for a typewriter. When you don't know how to spell a word, you hit the key and it makes a blur that might be an e, an a, or most anything else."

How Much Power Do You Need?

The 25-40 Trundaar tractor purchased by the city of Riverside demonstrating its pulling power at the National Tractor Show of the West. Is it any wonder it was the talk of the show when people see such beautiful construction, how easily operated, how it will turn completely around in its own length and then to think of a track that is practically without expense or trouble to the owner. Now do not fail to see it.

There's a Big Leak In Your Purse

You Are Losing Money Daily and Rapidly :

Are you practicing transportation thrift in the use of your automobile? Have you computed the cost of operation and maintenance and compared it with what you could travel for by as rapid and as comfortable means; and many times, more rapidly?

As a business proposition you cannot afford to use your machine for business trips to the city, especially if you are making the trip daily. If it is purely a matter of pleasure and desire and you can afford it—that's different, although it is not thrift.

The cost of commutation transportation over the Pacific Electric Railway is one and one-third cents per mile, and books adaptable to almost any number of trips per month desired are available. Tests made by the Government fix the cost of automobile operation at 8 to 14 cents per mile ranging from "Henry's" up. Your pencil need not be very sharp to figure that as a business proposition, your machine does not favor you as compared to the Railway's offer. No machine made can serve you at that cost.

Of course, it's a question: Can you afford it; or, do you just want to, anyway, without reason; or are you thrifty and want to stop all the leaks?

Trials and Troubles of Cotton Growers

By M. E. Bemis

CROWERS of long staple cotton who planted their seed and cultivated the fields with the roseate promise of dollar a pound lint are now facing a market that is made gloomy with dark visaged buyers who are indifferent about making any purchases and reluctantly offer possibly 60, maybe 65, in a few instances more, sometimes even less. The grower who is in a position to hold his cotton is not worrying—much. It is a well known fact that the world's crop of cotton is short. The mills of Britain, of Belgium and other countries of Continental Europe are just beginning to take somewhere near the normal amount of raw cotton. So far as the long staple is concerned the chief supply is from Egypt, and as the amount produced in America represents from ten to 12 per cent of the entire world's crop of long staple cotton, it is reasonable to suppose that the price should be dependent upon the price paid for the Egyptian. So far as can be learned price of cotton in Alexandria, as set by Liverpool buyers largely, is still something over \$1 a pound. Logically the American mills handling long staple cotton should be paying approximately the price of cotton in Egypt plus the freight, commissions, etc. Foreign exchange enters into the problem somewhat, but even with the prevailing low rates of exchange there is an evident justification of the hope and belief that cotton prices must in the final adjustment rule somewhere near the prices that were dreamed of earlier in the year. In other words, the cotton associations are generally advising that cotton should be held for 90 cents or better.

As a basis for the fixing of a price

at which the grower could afford to sell, County Agent H. C. Heard of Maricopa, Arizona, has made a considerable study of the cost of growing a crop of cotton. The following figures have been given out and are believed to be as nearly accurate as any averages that may be made.

Preparation for planting, including stalk cutting, dragging, plowing, disking, bordering and everything prior to seeding, except irrigation, \$14.32; seed and seeding, \$3.65; cultivation, \$8.18; hoeing, \$10.93; thinning, \$3.41; irrigation, water and labor, \$5.86; miscellaneous, \$4.71; total cost of growing, exclusive of rent, interest on growing funds, superintendence, picking, ginning and hauling, per acre, \$51.07. Labor for picking, estimating a half bale, or 900 pounds, of seed cotton to the acre at four cents, \$36; ginning at \$1.30 per 100 pounds, \$11.30; supervising cotton picking, hauling to gin, tent damage, insurance of seed cotton on farm, and incidental picking expense, \$13.50; rent, averaging 13 reports, \$50.43; superintendence, \$7.50. Total cost of growing one acre of cotton, \$170.20. To this might be added an interest charge on the above cost which has been estimated at \$9.76 for a period of nine months. This gives a cost of 71.9 cents a pound for producing 250 pounds of lint cotton per acre. This is slightly above the estimates of the crop for this year and also slightly above the actual production for last year.

The above figures are of course only an average; some growers will produce cotton for less and others will lose money even at 71 cents. Some will get by for less on some items, such as preparation of the land, and find costs of cultivation or picking mounting higher, so the figures, while representative of the averages of many

growers, will be found probably rather near the correct figure for the majority.

If they are correct then it is obvious that growers are justified in holding their cotton for higher prices. One factor of low prices this season is the low price of cotton seed. For the past few seasons the seed as a side line, or by-product, has been a source of considerable revenue, as the price has generally been around \$60 to \$70 per ton. This season the price offered is \$20.

The general industrial situation will of course influence the buyers to a very large degree. The tightening of money by the federal reserve bank has affected the automobile industry more seriously than probably any other single industry. The tire supply is to a somewhat lesser degree affected by anything which concerns the general automobile industry, and tire manufacturers at this particular time are uncertain what the demands are going to be in the next six, eight or 12 months. While most people are optimistic and believe that with a curtailment of certain activities, which will render the whole industry more stable, there will continue the unprecedented demand for tires and automobiles which has made this one of the leading industries of the country. With all their optimism there is an element of uncertainty and the manufacturers are disposed to go slow.

So far as one can see into the future it looks like a good gamble to hold on to cotton until after the first of the year, and possibly longer. Some growers can do this, but what of those who cannot? There are some who have made a crop on the "shoestring" plan who are strictly up against it. Some of these may be helped over the crisis by temporary advances, which are now being arranged through one of the cotton marketing associations. Others will sacrifice a portion of the crop at whatever the market offers and endeavor to hold the balance.

The situation is by no means discouraging. Above the clouds is a rainbow of promise. Throughout the cotton growing districts of the Southwest, and particularly in the Salt River Valley, there was too large an acreage in cotton in proportion to other crops. The uncertain condition of the market this season will result in a much larger acreage of grain and alfalfa this winter and next spring. More grain and more alfalfa means more dairy cows, more beef steers and more chickens and hogs. Smaller fields of cotton on every farm, and this on the soil best adapted, will mean heavier yields and consequently cheaper production. More cotton to the acre, but fewer acres, is the pot of gold at the foot of the rainbow.

DISTRIBUTION OF WATERS OF KINGS RIVER

THE first year's work on an interesting experiment in the handling of the water and its division among the great irrigating systems of Kings River has just been successfully concluded. The work was carried on by the state water commission under the supervision of Engineer Chas. L. Kaupke as water master. This method of regulating head gate divisions through the agency of a public officer, while new in California, has long been in use in other Western states.

It is to the credit of the water users along Kings River that they have had the initiative and courage to voluntarily adopt and apply this method to meet a most vexing problem. The various ditch companies and other owners of water rights first organized and agreed upon a tentative diversion schedule defining their respective rights and priorities. The state water commission was then asked to place one of its engineers in charge of the distribution of the water of the river among the various canals having legal rights to the water.

The work of the water master lay in adjusting the diversions to conform with the constant variation of flow in the river. These variations are caused principally by changes in the rate of snow melting due to temperature, and occur not only from day to day but from morning to night. To equitably distribute the water requires an intimate knowledge of the river

Trade Mark Reg.

Medium prices

It is easier to find good clothes at high prices than to find good clothes at medium prices. Styleplus, however, stand out the nation over as suits and overcoats of really distinctive quality at prices never extreme. Their fabrics are all-wool; their styling excellent; their tailoring exceptional. Their guarantee is full and absolute; satisfaction is certain; assured.

Buy at a clothing store where you have the chance to see and try on the clothes before you pay for them.

Sold by one leading clothing-merchant in most cities and towns. Write us (Dept. AB) for name of local dealer.

Henry Sonneborn & Co., Inc., Baltimore, Md.

throughout its whole course, as well as a high order of ability and a wide experience in adjusting the headgates up and down the river following the increasing and diminishing flow of the stream.

Under the old method each canal superintendent or engineer was responsible to the water users under his canal to see that their full supply was being diverted. Obviously such a method, while fairly satisfactory as long as water was plentiful, developed endless disputes and friction during low water stages, as well as involving very large expenditures for litigation in efforts to check against rival claimants. Large losses of water also occurred.

The problem of water distribution from natural streams is thus one in which the public is becoming more and more concerned. The state water commission, foreseeing the need of such supervision, in the 1917 session of the legislature introduced a bill for an amendment to the water commission act. This bill gave the commission authority to place water masters upon the large streams of the state, but the plan was then so little understood and in consequence met with such opposition that it was allowed to die on the files.

The Kings River system is one of the most important in the state, supplying water for an area of over 625,000 acres, and is one of the largest, if not the largest, of the irrigation streams in the country. Its length from the edge of the valley to Tulare Lake is 60 miles and to its juncture with the San Joaquin River, 90 miles. It supplies water to 20 large canals and to some 25 smaller ones, serving one of the richest and most diversified irrigated areas in the world. Among the principal canals are: Fresno Canal, supplying 190,000 acres; Consolidated System, 95,000 acres; Alta Irrigation District, 130,000 acres; People's Ditch, 75,000 acres; Last Chance Ditch, 37,000 acres; Lemoore Canal, 35,000 acres.

It is apparent that the control of the distribution of a water supply to such a large area is one of first importance to the people on the river as well as to the state at large. To successfully and satisfactorily carry this out requires constant observation of the stream flow, including continuous measurements at many points along its course. Legal priorities and definitions of rights must be observed and frequently these vary with the season of the year, adding complications to the problem. Add to these elements of the problem, seasonal variations, sudden hot spells that without warning send down from the mountains large increases in the flow that must be handled and put to use lest it spread to the lower levels and ruin thousands of acres of grain crops; summer thunder storms, as well as accidents to canals or headgates; and the job of keeping several thousand irrigators, normally suspicious of each other, reasonably satisfied; and it can be seen that the job of water master is one full of incident as well as hard work.

That the method is practical and can be successfully carried out has been demonstrated to the great satisfaction of the water users on one of our most important irrigating systems. That it will be eventually applied to all the other large rivers in the state is inevitable. Neither the people nor the state will endure the losses and waste of the old methods after such showing as is being made on the Kings River.

EXPORT APPLE OUTLOOK

With the inauguration of the all water transportation service from Seattle to Europe, and considering the report that England is nearly without apples, due to an unfavorable season, California Grade A and B, as well as the canned and dried fruit interests, should awaken to the possibilities. However, it should be taken into consideration that New Zealand and possibly Australia will be strong competitors for this business, and it is understood at this time that an arbitrary tax will be placed upon foreign apples in favor of the home grown English product.

It is reported from Sonoma County that many pickers of wine grapes are being paid \$5 per ton.

Say "Show Me" to Any Mitchell Dealer

If you want all that your money can bring, get acquainted with the New Mitchell. You'll be surprised. You've never expected such values.

You will be impressed by the generosity of the Mitchell policy. And you'll wonder how we do it. The secret is that we build complete and save the profits that would otherwise have to be paid to outside parts makers and body builders.

What we save we put into the car. That is the only way we can account for such a better car at the price. You'll be able to see it at once. You'll note the added roominess, the greater comfort. You'll like the stylish lines. You'll find greater riding ease — easier handling.

Just sit in a New Mitchell. Ride in it. Drive it. Note that our Touring Car seats *six* instead of five, our Roadster seats *three* instead of two, our Sedan seats *six* instead of five, our Coupe seats *four* instead of three.

That, certainly, isn't skimping. Nor can you find a single item where Mitchell doesn't offer more. It's our policy. It has won the thousands of Mitchell enthusiasts.

See if you can find such a fine car at these Mitchell prices: *Six* passenger Touring Car, \$1750; *six* passenger Sedan, \$2900; *four* passenger Coupe, \$2800; *three* passenger Roadster, \$1750.

Visit a Mitchell dealer now. Then contrast different cars of the above prices and higher.

Los Angeles, Sept. 28—Welghed and delivered off cars without food or water: Hogs (hard-grain): 125 to 175 lbs., 16.50; 175 to 225 lbs., 17.50.

Cattle (on foot, gross weight): Steers, good, 8.50@9.00; medium, 8.00@8.50; cows, good, 7.50@8.00; medium, 7.00@7.50; bulls and stags, 6.00; calves, 125 to 150 lbs., 11.00; 175 to 225 lbs., 10.50.

Sheep—Ewes, 7.50@8.00; lambs, 12.50@13.00.

POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, September 28, by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk. There may be slight fluctuations during the day's trading.

Potatoes: Supplies heavy, market steady. Local: Early and White Rose, fancy No. 1's, mostly 1.00 and 1.25 per lug; 100 lbs., sacked No. 1's, 2.25@2.50. Stocktons: Burbanks, quality, generally best, 3.00@3.25 sacked; few poorer low as 2.60. Sweet potatoes, lug, 1.25@1.40.

Onions: Stocktons: Whites 2.25@2.50 cwt.; Browns mostly 1.50@1.75 cwt.

Garlic, lb., 12@18.

VEGETABLES

These are the actual prices obtained September 28 by the Los Angeles wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Beans: Ky. Wonder, 8@10; Limas, 7@9.

Beets: Doz., 40@50.

Cabbage: Supplies moderate, market steady, movement good, wide range in quality. Best mostly 3 per lb.; per field crate, best 2.50@3.00.

Carrots: Doz., 35@45; sack, 1.25@1.50.

Celery: Doz. bunches, 80@1.00; cr., 3.00@3.75.

Corn: Local, best 1.35@1.50 per box.

Cucumbers: Market steady; local, best, lug, 1.00@1.25.

Egg Plant: Lb., 4@6.

Lettuce: Field crs., 1.00@1.25.

Peppers: Bells and Chilis, lb., 3@5.

Squash: Local summer, lugs, 75@1.10.

Hubbard, lb., 2½@3.

Tomatoes: Local lugs, best, mostly 50@75.

Turnips: Per doz., 35@50.

DECIDUOUS FRUITS

These are the actual prices obtained September 28 by the Los Angeles wholesalers in sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk.

Apples: Supplies liberal. Bushel boxes: Bellefleurs, 4-tier, 1.50@1.75; 4½ tier, 1.35@1.55. Local: Various varieties, 50@1.00 per lug; Jonathans, fancy large sizes, 3.00@3.25.

Bananas: Lb., 11@12.

Cantaloupes and Melons: Cantaloupes—Market steady, supplies moderate, quality and condition wide range. Local Tip-top and Paul Rose, pink meats, standard crates, best 2.00@2.25. Watermelons, lb., 1@1½.

Figs: Box, 1.00@1.25.

Grapes: Muscats, Malagas, 7@8; Tokays, 8@9; Cornichon, 8@9.

Peaches: Local, best, lug, 1.60@1.90.

Pears: Bartlett's, best, lb., local, mostly 6@8; Northern mostly, 8@10.

Prunes: Lb., 6@8.

CITRUS FRUITS

Grapefruit: California, per box, market pack, 3.00@3.25; special packed brands, 3.75@4.25.

Lemons: Market dull, wide range in prices. Local stock: Packed, bx., 2.75@3.25; loose, 1.00@1.50; lug, mostly 50@60.

Oranges: Supplies moderate, market strong. Valencias: Packed special brands, 126's, 150's and 176's, 7.00@7.75. Local packed, second grade, 4.00; packing house culls, 75@1.50.

HONEY

U. S. bureau of markets: Movement limited, market unsettled, prices slightly lower account slump sugar market and financial stringency. Carloads f.o.b. usual terms: White Sage Orange, 18½@20. Extra light amber sage, 17½. Light amber sage, 16; light amber alfalfa, 15@17½; Becawax: 38@44.

BEANS

California Lima Bean Growers Association, September 20.

The association has not yet commenced to quote and sell new crop Limas and baby Limas. The current market as indicated by quotations of independent shippers has apparently shown a steady though not rapid decline during the past

two weeks and stands now on the basis of about 9 cents on regular Limas and 8½ on baby Limas, f.o.b. coast. The harvesting is proceeding quite rapidly under favorable weather conditions and will be completed earlier than usual if present favorable weather continues for two or three weeks longer.

GRAIN AND FEEDS

Grain Exch. prices bid Sept. 28:

Barley: Carlots, on track, 2.00@2.03½.

2.16½.

Milo: 2.85@3.17½.

Corn: Blk., Yellow, No. 2, 2.60.

56.00.

HAY

Alfalfa Growers of California, September 29:

The embargo against shipments of alfalfa to California on account of the weevil has been extended and is now applied against Utah, Idaho, parts of Wyoming and Washoe County, Nevada. This only leaves open shipments from Arizona, which state has this year but little, if any, surplus for shipment to other states. The speculative markets for wheat, corn, meats, lard, cotton, etc., have been declining for some time. The explanation is that this country produces a large surplus of the articles named, which surplus Europe needs badly and is anxious to buy, but has not the money to pay for, and our country is at present not in position to sell on credit to the necessary extent.

The situation is different in regard to production of milk and butter; of these the United States does not produce a surplus. On the contrary, there is a shortage, which in some centers is threatening to become acute, especially as regards milk. To increase the production sufficiently is a slow process; it is a matter of at least several years. The present export situation should therefore not affect the market for dairy products, and least of all out here where alfalfa is the principal dairy feed. The alfalfa production of the state is this year below normal in acreage and yield and provided the association has the adequate support of the alfalfa growers there is no reason why they should not get throughout the crop year the fair prices to which they are legitimately entitled. There were 1,000 tons of hay of all kinds received on the Los Angeles tracks the week ending September 25 and 250 tons held over as against 930 tons the week before.

Veterinary

Corns on Horses' Feet

Is there an effective cure for corns on horses' feet?—Subscriber, Lindsay.
Since there is a very great difference in causes of corns, it is somewhat difficult to recommend treatment. The cause should first be determined and that cause removed. Sometimes a change in the method of shoeing may be desirable, although it is not advisable as a general practice to make a sudden change in the method of shoeing. If the corns are chronic a poultice might help to soften the affected part, after which it can be cut out. Care should be taken, however, not to injure the soft tissues of the foot. Some corns can be cut out, after which the foot should be poulticed if it is inflamed badly. If the case is serious and requires much of an operation, it would be advisable to consult a veterinarian who could determine the most effective means of treatment.—G. E. G.

Slobbers

Please give treatment for horse that slobbers on her hay. Had her teeth attended to few months ago, one pulled. She is 12 years old, constantly losing flesh and hair seems very coarse.—Subscriber, Calistoga.

Slobbers is often caused by bad teeth, but as you say you have just had this mare's teeth put in good order, that would not seem to be the trouble in this case. Feed of various kinds will sometimes cause slobbering. A change of feed might remedy the difficulty, as will washing out the mouth with alum water. If a change is not observed in a short time give a dose of eight teaspoons powdered aloes, one teaspoon common soda and one teaspoon ginger. This should be dissolved in a pint of warm water and given as a drench. This remedy will probably give good results.—G. E. G.

Eyes Watering

Six year old mare seems well, takes on flesh easily and keeps in good shape but tears run from both eyes all the time and form crusts. Have had her teeth examined, thinking she had blind teeth, but was told that her teeth are in good shape.—Subscriber, Eureka.

This would indicate inflammation of the external part of the eye. It may also indicate some trouble in the lachrymal apparatus which would interfere with the ducts leading from the eye to the nose. If the eyelids do not show inflammation or swelling it would be well to examine the lachrymal ducts. This may be remedied by sponging out the eye with a sponge or soft rag with warm boracic acid solution. You might also drop a five or ten per cent solution of argyrol in the corner of the eye if it can be applied. Another remedy which some-

times gets good results is to feed warm mash of wheat bran in a nose bag so that the relaxing effects of the water vapor may reach the lachrymal ducts. Sometimes it is necessary to have a veterinarian open up the ducts with a silver probe, but this should never be attempted by anyone other than an experienced veterinarian. Diseased teeth may also cause troubles of this kind.—G. E. G.

YOUNG CITRUS ORCHARDS

During a recent lecture on soils Prof. J. W. Nelson was asked what he would do with the soil in a newly planted orange orchard. He said: "I would keep the root tendency downward in the younger days when only tree growth is taking place and keep the soil stirred as deeply as I could. Then work more lightly or shallowly as years go on, after a time disking instead of plowing. But heavy soils must be aerated and some plowing must be done. Treat light soils with compost if available and turn cover crops under when young and tender. In heavy soils you may leave cover crops until they are older and more more fibrous, for they decompose more quickly in heavy soils. But in light soils mature fibrous growth holds the soil too open; tender growth packs closely and decomposes quickly.

"Get your tree roots down in the early days, for the nearer roots are to the surface the more easily and quickly are they affected by all surface or exterior conditions. It has been found that surface soil at 130 degrees is 30 degrees hotter than that just below and that soil below a summer cover crop is that much cooler than surrounding bare soil. Summer cover cropping should be practiced wherever possible, for with a winter crop only many orchard soils are not being improved. Summer cultivation burns out, by oxidation, all that is gained by turning under in spring and the humus content of your soil is not amended.

"I know of an orchard at San Bernardino, previously in poor condition, that had been plowed deeply and cultivated much, without improvement. For seven years it has been double cropped, whereas previously but the one or winter cover crop was grown. During these later years this orchard has gained 12 to 15 tons per acre in humus content, which means eight times that much in water holding capacity. No plowing has been done during the seven years, but disking three to five inches deep has been the practice. A nearby orchard with but winter crops is still in poor condition through plowing and cultivation. The benefits of winter crops have been lost by gas through burning in summer. If enough nitrogen is present in the soil you may use a non-leguminous summer crop; it is the humus you need. One pound of growing crop requires 600 to 800 pounds of water,

therefore keep weeds from growing. For that reason watch your cover crop. If it is using up too much soil moisture or you are short of water, turn the cover crop under. Always sacrifice the cover for the good of the tree whenever low moisture content demands a change."—E. B.

NOT SAN JOSE

San Jose scale has had a habit of causing a slight red spot surrounding its point of location on apples, pears and other fruits, hence many have jumped to the conclusion that a tiny red spot indicated scale infestation. This is not always correct, as was stated in circular letter sent out by state department of agriculture in effect that apples affected with blemishes referred to by various growers and shippers as sun spots or aphids "stings," but which closely resemble the red spot commonly associated with San Jose scale infection, should not be confused with the latter. These red spots are entirely superficial, amounting to nothing more than a red discoloration, and are properly admitted to the California "B" Grade.

This condition is quite prevalent in the Watsonville district this season, hence this notice.

FOR BETTER CALIFORNIA POTATOES

Without good seed no permanent success can be expected and production of good seed is coming to be an industry in itself. Not only does it pay in increased production for home use but the market for this kind of stock is becoming better every year as growers of commercial potatoes throughout the state are recognizing the absolute necessity of better seed if they are to secure profitable yields.

It is impossible for anyone to determine by merely looking at potato tubers whether they will make good seed or not, as they may carry disease or be inferior in producing power without the tubers giving indication of this. It is, therefore, necessary to inspect the plants in the fields where they are growing in order to determine their productiveness, freedom from disease and general fitness for seed purposes. Because of this fact the state department of agriculture has established a system of seed potato inspection which makes it possible for any grower to have his fields inspected, and if his crop comes up to the required standard for good seed he can get a certificate to this effect and sell his crop as California certi-

fied seed potatoes. A tag is placed upon every sack of such potatoes so that everyone purchasing them can know what he is getting. Full particulars regarding this inspection work can be obtained by writing the state department of agriculture at Sacramento.

FLORIDA ENDORSES CALIFORNIA FUMIGATION PROCEDURE

Professor Wilmon Newell, plant commissioner of Florida, writes the state department of agriculture:

"We are in hearty sympathy with your views on the fumigation and cleaning of railroad cars used in the transportation of plant products. As you doubtless know, the federal horticultural board already has provided for the cleaning of cars used in transporting cotton or cotton seed in areas exposed to danger of infestation by the pink bollworm. We have been trying to do something along this line in connection with fruit cars here in Florida, although this work has been purely cooperative and no regulations covering it have been adopted. We have had the matter up with the principal refrigerator car companies and have arranged for the sanitary disposition of cleanings from the cars at the principal icing plants. If our funds permitted, we would like to go very much farther than this, however, in this direction."

PLAINLY A PERSONAGE

"I don't know who that solemn guy over there is, but I'll betcha he's somebody important," whispered Heloise of the rapid fire restaurant.

"What makes you think so?" returned Claudine of the same establishment. "He never says anything about it, does he?"

"No; but, my gosh, he can actually look dignified while eating spaghetti!"

REAL PLEASURE

"Did your wife enjoy the book I sent her to read?"

"Did she? Had the time of her life. Cried herself sick over it."

The **49er** says—
"the genuine **GIANT**
dates back to
1866"

"I remember well when we used black powder for stump blasting and mining. Just after the Civil War the first Giant Powder ever made in the United States was manufactured in a little laboratory in what is now Golden Gate park.

"Out of that beginning has grown The Giant Powder Co., Con., with its chain of great plants and magazine stocks throughout the entire West. And the Giant Farm Powders are being used for stump blasting, boulder blasting, tree planting, etc., by thousands of Western land owners. Giant Powders have always been so popular that some people have thought any ordinary dynamite was Giant Powder, but that is wrong. The only way to get Giant economy and efficiency is to get the genuine Giant Powders made by the originators of the name."

Just tell us "send me your book," and we will mail you our valuable guide to blasting, "Better Farming with Giant Farm Powders."

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property. Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now. Write today, stating location of land and number of acres.

THE AMERICAN

New Field for Poultrymen in the Southwest

By M. E. Bemis

Recent investigations and experiences of breeders indicate that there is a practically new and undeveloped field for poultry breeders in the extreme southwestern part of the United States. D. M. Green of the United States department of agriculture has been located in Phoenix, Arizona, for the past few months, planning the work for some government experiments to be conducted at the government plant west of Glendale in the Salt River Valley. He recently stated that it was his belief that owing to the long growing season, the very mild winters, dry climate and the ability to produce green feed the year round, poultrymen here have an opportunity to produce breeding stock which may be sold to Eastern breeders to great advantage.

In the East it is a commonly accepted idea that spring hatched pul-

say, they have known that pullets here did make good producers and the progeny were stronger in vitality and in turn produced better stock. Perhaps we have not thought of this as being a factor that could be commercialized. We have found in the last few years that stock produced here, when shipped to other sections stands comparison in the big shows remarkably well. This has been particularly true in the case of Rhode Island Whites and Rhode Island Reds. Two of our breeders of Rhode Island Reds have won notable honors from some of the larger shows outside of Arizona. Several of our breeders of Rhode Island Whites have also met strong competition in the Middle West and have come back with the blue ribbons.

When we come to think of it, there is no reason why the same climatic condition which gives rosy cheeks to

POULTRYMAN'S CALENDAR—OCTOBER, THE PULLET MONTH

October ought to be sacred to the pullets, for much depends on getting them started at the real business of their life in good time. They should be in the laying house by September. On many ranches they go from the brooder house to the laying houses; on others they spend some time in colony coops. However the intervening time is spent it is essential that by October they be at home in the laying house and receiving the full laying ration of mash, grain and greens.

Early pullets may be kept from fall molting by a conditioning mash containing a good deal of corn meal middlings, and, if they are obtainable, ground oats, for the pullet must have surplus fat on her body to keep her laying through the fall. If there is no surplus she stops laying and goes into the molt.

Sanitation must receive adequate attention, especially in the pullet houses. Keep mites away at any cost. Remove droppings daily if possible. Don't overcrowd. Ventilate as carefully as you would for your own family. Don't skimp the green feed.—J. A. K.

lets do not make the best of breeders. This is largely due to the fact that "spring hatch" throughout a great portion of the country means those that are hatched the latter part of March, in April or in May. Here in the Southwest, particularly in Southern Arizona and Southern California, the bulk of the hatching is done in January and February. February is perhaps the ideal month of the entire season. Poultry hatched in February reaches maturity just about the time cooler weather comes and they are ready to begin laying and have laid out their first litters before the breeding season, hence they are in the pink of condition for the breeding pen. Our successful poultrymen have realized this in a general sort of way, that is to

the growing boys and girls or brings back health to the sick, should not be just as potent to produce health and vitality in the animals and fowls. Breeders of dairy cattle who have brought in stock from a distance have almost invariably noticed that the succeeding generation shows larger frame and greater vitality than the imported stock.

Poultrymen generally have come to accept the fact that green feed is one of the very important essentials in the production of healthy poultry and the maintenance of health in the flock. Here where we have 12 months growing season, green feed is not the difficult thing to obtain that it is in the East, where it is necessary to sprout oats for five months in the year.

National Egg Laying Contest

By T. W. Noland

The 300 hens in the egg laying contest at Mountain Grove, Missouri, laid 4,510 eggs during August, or an average of 15.03 eggs per bird. Pen 43, S. C. Reds, owned by W. A. Magruder, Whiteside, Missouri, won the cup for August with a record of 117 eggs. The average production was the highest for the month of August during the nine contests held by the station. The weather being unusually cool during the month helped in the way of egg production.

All flocks that have not been culled during July and August should be gone over now. All specimens that show by the various tests that they have not been good layers should be disposed of on the market or consumed at home. Don't sell to your neighbors or someone else the hens that are not good enough for you to keep. Don't neglect to feed your hens during the molting period just as well as during the heavy laying season. Feed is necessary for the growth of feathers as well as for the production of eggs.

Ten Leading Pens for August

SEED FOR SALE

FROM THE FAMOUS

Hull-less Barley

Of the McNeely Ranch

Big Crop, High Food Value, and an Especially Desirable Chicken Food

Having successfully demonstrated the productive and food value of Hull-less Barley, we offer choice seed for sale at \$6.00 per bushel. It is acclimated, grows rapidly, producing from 30 to 50 bushels per acre in Tulare County. Poultrymen say it is excellent chicken feed because of absence of hulls. Small orders accepted. Dealers will find this seed in big demand. Farmers putting out small acreages will find it a ready seller for seeding purposes.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

Santa Cruz, September 18:

The end of the 44th week of the contest finds Bellows Bros. in first place, with a total count of 1,854 eggs for their ten hens. S. L. Gibson of Santa Cruz caught up with B. F. Rose of Santa Cruz, tying him for fourth place.

High pens stand as follows: Bellows, 1,854 eggs; Walls, 1,841; Gibson, 1,806; Rose, 1,794; Gibson, 1,794; Enterprise, 1,787; Neef, 1,782; Barker, 1,748; Wood, 1,709.

High pens for the week: Bellows, 40 eggs; Neef, 35; Gibson, 34; Stalling, 31; Romig, 31; Lehman, 30; Enterprise, 30.

THE POULTRY SHOW AT LOS ANGELES

E. I. Hammond of Riverside, in charge of the poultry, rabbit and pigeon department at the Los Angeles Livestock Show, reports entries having been received from more than 200 exhibitors.

The poultry show will receive birds on October 4; judging will begin at 10 a. m. on Wednesday, October 5. It is expected that many of the displays will remain in place until October 10, closing day of the Livestock Show.

The junior exhibits will be in charge of Andrew M. Stodel, 2018 Magholia Avenue, Los Angeles. Junior prizes range from \$1.50 to 25 cents.

SINCERITY IN LOWER ANIMALS

The conspicuousness of the will in the lower order of animals explains the delight we take in dogs, apes, cats, etc.; it is the entirely naive way in which they express themselves that gives us so much pleasure.

The sight of any free animal going about its business undisturbed, seeking its food or looking after its young, or mixing in the company of its kind, all the time being exactly what it ought to be and can be—what a strange pleasure it gives us! Even if it is only a bird, I can watch it for a long time with delight; or a water rat, or a hedgehog; or, better still, a weasel, a deer or a stag. The main reason we take so much pleasure in looking at animals is that we like to see our own nature in such a simplified form. There is only one mendacious being in the world, and that is man. Every other is true and sincere, and makes no attempt to conceal what it is, expressing its feelings just as they are.—Schopenhauer.

CATS HOLD CITY OFFICES

Owing to the large number of rats that have appeared in Paris since the war, the city government has employed "official cats" to keep the city offices and museums free from rodents. Their pay is not munificent, about \$2.50 a year, in food—but then, no new classes of labor who break into the industrial field are ever highly paid at the start. So what can a cat expect?

These cats earn their salaries. The city is overrun with rats and the war has sadly depleted the cat ranks. Possible means of eliminating the rats have been discussed by officials, but as yet no effective plan has been adopted to keep down their increase. Officials of the American Red Cross on duty in Paris have investigated the matter and have come to the conclusion that about the only adequate rat ratchers have been the cats, but that the cat forces are greatly outnumbered by their hereditary enemies.

End the Monotonous Grind!

G-E Motors Save Both Time and Labor!

FREE yourself from hard tasks by putting G-E motors on the farm.

A one horse-power G-E motor can do the work of six good farm "huskies"—no need of "fine figuring" to see the dollars saved when motors replace men!

Growing up with COLGATE'S contest!

At least one of the stores in your neighborhood will have a window display of Colgate's Ribbon Dental Cream. These windows will be ready to photograph beginning October 1st.

Anyone not over seventeen years of age may try for generous money prizes, which will be given for the best photographs of a Colgate display.

\$1005.00 in Prizes

Look for a store window with the Colgate pictures and packages in it. The dealer will gladly let you take a picture of his window.

Look on the back covers of some of the October magazines where you will find all the rules of the contest. Or write to Colgate & Co., Dept. 48 199 Fulton Street, New York, for particulars.

Ask an older friend who takes pictures or the man from whom you buy films to advise you how to photograph windows. Taking pictures through plate glass is a tricky operation and one that you may never have tried before.

And let parents remember, too, that by encouraging the boys and girls to enter this unique contest, there is not only added zest to Kodak-ing, but a fresh interest in the importance of brushing the teeth regularly, night and morning. The delicious flavor of Ribbon Dental Cream is an important help in forming that habit for health.

Colgate's—the safe dentifrice—is indorsed by more dentists than any other dentifrice.

115 CASH PRIZES

Enter your photographs in the contest, for which prizes will be awarded as follows:

For the best photograph . . . \$100

For the 3 next best . . . \$50 each

For the 10 next best . . . \$25 each

For the 101 next best . . . \$5 each

Prizes will be awarded before January 1st, and winners will be announced in an early 1921 issue of this magazine. In case of a tie, each will receive the full value of the prize tied for.

ROMANCE IN THE CITY

God opens doors to those who knock,
He sends His dreams to those who pray
For some romance the while they toil
In dingy offices all day.
When fog hangs over London town,
And City streets are cold and gray.

Each Bill of Lading's a romance
To make me dream of Eastern seas,
Of towns with strangely sounding names,
Of shining harbors, sun-bathed quays;
I picture grave-faced merchant-men
In dim bazaars as consignees.

I write the vessel's name and port,
And lo! her halliards sing to me.
I am on board and Eastward bound
For Smyrna and Gallipoli,
Thro' archipelagoes that gleam
Like opals on a sapphire sea.

I see the goods I invoice home'd
In palaces of dusky kings,
In corridors all pearl and gold,
In courtyards full of splendid things,
Where slave-girls dance, magnificent
Beyond a man's imaginings.

When fog comes down on London town,
And City streets are cold and gray,
God opens doors to those who knock,
And sends romance to those who pray
For warmth and color, while they toil
In dingy offices all day.—G. E. M.

DRESSMAKING

By Elia W. Peattie in Youth's Companion

LEILA PRIOR'S best aunt, Mrs. Whittaker Browne, had just sent Leila a scholarship at Fairfield. Mrs. Browne was Leila's best aunt not because she had more noble qualities than Leila's other aunts. She was "best" in the sense that a "best dress" is best—because she was associated with holidays and was less comfortable and more awe inspiring. She wrote:

"I owe much that I am in life, my dear niece, to dear St. Mary's, and in sending you this scholarship for four years I feel that I am showing not only my affection for you but my appreciation of my school as well. You will notice that the scholarship includes your residence at Higby Hall and your board at the commons. I have stipulated that you shall have the room that I myself occupied, and I sincerely hope and believe that it will be for you, as it was for me, the beginning of a larger and more genial life than I could have enjoyed in the little town where your father and I were born, and where he, unfortunately, still lives.

"Having no daughters of my own, I naturally take an interest in my brother's girl; he, I suspect, is largely concerned with his boys. I want you not only to acquire a higher education in advanced branches of study but also to have the opportunity of forming your friendships among young people of the finest quality. Your excellent mother will no doubt see the matter as I do. Give my regards to her and to your father, and believe me to be, as always,

"Your loving aunt,
Isabel Prior Browne."

"How like Isabel!" said Mr. Prior, when he had read his sister's letter. "So kind—and autocratic."

"Very kind, certainly," faltered his wife. "And of course it would never do to refuse."

"Why should you refuse? Isabel has covered everything: tuition, lodging, board—"

"But not clothes," said Mrs. Prior. "Clothes! Well, I should hope not. We can afford to clothe our own daughter, I hope."

"Yes," said Mrs. Prior, pensively. Her head drooped a little.

"Leila always has been properly clothed, I believe," continued Mr. Prior in a challenging manner.

"Oh, yes. Yes, Thomas, she has."

"For goodness' sake, Florence, come out and say what you have to say. My sister is doing for Leila precisely what we wished to do, and what we would have done if both of her brothers had not been in college at once. Dick was saying the other day that it seemed an outrage that, although Leila was the best student in the family, she should have to put up with the schools we have in this little town, while he and Fred went away."

"Well," said Mrs. Prior, poking at the fire nervously, "of course Leila has been properly clothed, as you say, but fitting her out for boarding school is a very different matter from making

her tidy at home. Two good winter dresses, a jacket and a coat, some home things, and a hat or two that I furnished up myself, did very well here at home."

"She doesn't go away to school to show off her clothes. I never heard you take such a tone before, Florence, and I can't understand it. The girl hasn't a vain hair in her head."

"Oh, yes, I have, dad!" Leila called from the other room. "I'm vain of not being vain. And the reason I'm not vain is because there's so little for my vanity to feed on."

She came in, laughing, and her father looked lovingly at the small, dark face of his daughter—a face, he had to admit, that had little claim to prettiness. Yet the eyes, at once bright and soft, the sensitive mouth, the little rounded chin and the low, broad brow, with its soft, enfolding hair, were very bonny. Everyone who looked at her face felt its kindness and breeding. Coming over to her father, she seated herself on the arm of his chair. She knew that he would slip his arm round her, and that she could then comfortably bend over him until her cheek touched his hair.

"Mother is right," she said solemnly. "I shall have to have clothes."

He laughed easily. "To hear you speak anyone would think that court robes were required."

"No, only simple things: a street suit, a cloak, two school dresses, three dinner dresses, one evening party frock, two sweaters, six shirt waists, two hats, four pairs of gloves, some furs, a gymnasium suit, a skating skirt, a riding habit, underclothes for cold, medium and warm weather, a negligee or two, a warm woolen wrapper, shoes, slippers, veils, overshoes and an umbrella. Otherwise I shall need nothing. The school is noted for its simplicity. The prospectus says so."

Mr. Prior had some trouble not to look dismayed.

"But you must have many of those things," he said to Leila. "Surely, Florence," he added, turning to his wife, "the girl has something to start on?"

But Mrs. Prior was not encouraging.

"Well, I managed to make a neat school dress for her out of my old blue serge," she said gently. "And I got a new blue silk for her for best. She has her last winter's coat, and of course enough necessary clothing to keep neat and clean." She smiled rather ruefully. "But I'm sorry to say keeping neat and clean isn't enough; is it, Leila?"

"You couldn't buy my outfit," said Leila, shaking her head, "under \$300. I've reckoned it up. Of course you can't afford that, dad darling, after all you've done for the boys. I'll write Aunt Isabel the best letter of thanks she ever had, and we'll forget the whole thing."

"I suppose," he said, "that you'd like to go, daughter?"

(Continued next week.)

MAGIC OF MILK

Here are some interesting recipes taken from "Magic of Milk," put out by the National Dairy Council to encourage larger use of milk:

Popovers

1 cup flour ¼ teaspoon salt, ¾ cup milk, 2 eggs, ½ teaspoon melted butter. Beat eggs thoroughly. Add gradually, while beating, milk and flour to which salt has been added. Add butter and beat two minutes with Dover egg beater. Put half teaspoon butter in hissing hot iron gem pans. Fill half with batter and bake 30 minutes in hot oven. Serve immediately.

Sour Milk Biscuits

1 quart flour, 1 teaspoon soda, 1 teaspoon salt, 1 teaspoon sugar, 2 tablespoons butter, sour milk to moisten

Ironing Comfort

You know you ought to help the good wife to keep cool these hot days by purchasing the Imperial Self-Heating Iron. No running back and forth from the hot stove with the Imperial, because it makes its own gas from ordinary gasoline. Absolutely safe and guaranteed.

Just beat time with your feet,

—and you can play the Manualo as beautifully as an artist plays a piano. All you do is work the pedals as if beating time. The Manualo responds to the musical feeling you instinctively put into the pedaling as the piano responds to the fingering of a fine pianist.

The Manualo The Player-Piano that is all but human

Our A. B. C. Book explains why, through the pedaling, you can control the Manualo and make it play just the way you want. Our book, "How to Know a Good Piano," tells how a piano should be made to give you full value for your money.

Send for these free books and you will know all about pianos and player-pianos before you buy.

How to Order Patterns
Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very best NEW YORK styles, all patterns ordered are delivered in NEW YORK. Therefore, we promise to deliver all patterns ordered within TWO WEEKS; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
California Cultivator
Los Angeles

(about $1\frac{1}{2}$ cups). Sift dry ingredients together, cut in butter with knife, add milk to make stiff dough. Roll thin and bake in hot oven. Serve hot with honey or maple syrup.

Spoon Cornbread

1 pint coarse white corn meal, $\frac{1}{2}$ teaspoon salt, 1 cup sour milk or buttermilk, 1 tablespoon butter, 1 egg, white and yolk beaten separately, $\frac{1}{2}$ teaspoon soda. Mix cornmeal, butter and salt with enough warm water to make smooth paste. Add egg, sour milk and soda. Beat until very smooth. Pour into hot well buttered baking dish and bake quickly in hot oven.

Cheese Soup

1 quart milk, 1 tablespoon onion, 1 blade mace, 1 pepper pod, 2 tablespoons butter, 2 tablespoons flour, $\frac{1}{2}$ cup grated cheese, 2 egg yolks, 1 teaspoon salt, $\frac{1}{4}$ teaspoon white pepper. Scald milk, onion, mace and pepper pod. Melt butter in sauce pan, blend flour with melted butter. Strain milk and seasonings, and add gradually to flour mixture, stirring all the time. Return to double boiler to cook. When creamy, add the cheese, salt and pepper, stirring until cheese is melted. Then pour over well beaten egg yolks, stirring all the time. Whip until frothing and serve.

Oatmeal and Mushroom Soup

Cook oatmeal with a small onion and sprig of parsley; then with hot milk. Strain and add chopped mushrooms.

Ginger Custard

Canton ginger, 4 eggs, 2 cups milk, $\frac{1}{2}$ cup sugar, $\frac{1}{4}$ teaspoon salt, 2 teaspoons vanilla. Cut canton ginger in thin strips and use for garnishing sides of buttered individual molds. Beat eggs slightly, add sugar, milk and seasonings, and strain into mold. Set in a pan of hot water and bake until firm. Remove to serving dish when chilled thoroughly.

Caramel Custard

4 cups scalded milk, 5 eggs, $\frac{1}{2}$ teaspoon salt, 1 teaspoon vanilla, $\frac{1}{2}$ cup sugar. Put sugar in omelet pan, stirring constantly over hot part of range until melted to a syrup of light brown color. Add gradually to milk, being careful that milk does not bubble up and go over, as is liable on account of high temperature of sugar. As soon as sugar is melted in milk, add mixture gradually to eggs slightly beaten, add salt and flavoring, then strain in buttered mold. Bake as custard. Chill and serve with caramel sauce.

Coffee Custard

2 cups milk, 2 tablespoons ground coffee, $\frac{1}{4}$ teaspoon salt, 3 eggs, $\frac{1}{4}$ cup sugar, $\frac{1}{4}$ teaspoon vanilla. Scald milk with coffee and strain. Beat eggs slightly; add sugar, salt, vanilla and milk. Strain into buttered individual molds, set in pan of hot water and make until firm.

Cheese Sauce

1 cup milk, 2 tablespoons flour, 1 ounce cheese ($\frac{1}{4}$ cup of grated cheese), salt and pepper. Thicken the milk with the flour and just before serving add the cheese, stirring until it is melted. This sauce is suitable to use in preparing creamed eggs, or to pour over toast, making a dish corresponding to ordinary milk toast, except for the presence of cheese. It may be seasoned with a little curry powder and poured over hard boiled eggs.

HOUSEHOLD QUERIES

Three-in-One Dessert

I am sending "Three-in-One Dessert" recipe as requested in Household Queries column.

Three-in-One Dessert: Line a deep pie plate with your favorite pie crust and fill with the following mixture: Mix together 1 cup sugar, 2 heaping tablespoons flour, pinch salt. Add butter size of an egg, melted, and yolks of 2 eggs. Beat all to a cream. Add to this juice and grated rind of 2 medium sized lemons, 1 cup milk, and lastly the whites of 2 eggs beaten stiff. Bake $\frac{1}{2}$ hour in rather slow oven. The result will be a flaky crust on the bottom, a delicate layer of cake on top and a dainty lemon filling between. Served with lemon sauce, you will have pudding, with meringue you have pie or simply frosted you have cake.—Mrs. E. B. O'B., Santa Ana.

Choose a piano for qualities that will endure

A piano is usually bought but once in a lifetime.

It will remain in your home from now henceforth,—a monument to your judgment, a witness to your taste.

As the years go on, associations will gather thick about this instrument. Little fingers will learn to play on it. Songs, old and new, will come from it mellow and familiar. During these years, your piano should come to be the very heart of your Home.

So choose this piano carefully. Choose it as you would choose an intimate member of your family circle. Choose it for the qualities that will endure.

A good piano need not be an expensive piano. But a "cheap" piano will yield nothing but a harvest of regrets.

For nearly half a century we have been selling good pianos.

We have a piano for every home, and will gladly arrange convenient payment terms.

Dealers in Steinway and Other Pianos, Pianola and Duo Art Pianos, Aeolian Player Pianos, Player Rolls, Etc.
